(a) Capital cost is defined as the user cost of capital (calculated at 8 per cent of the current value of non-current physical assets) plus the depreciation amount. The capital cost per casemix adjusted separation is equal to the capital cost adjusted by the IFRAC, divided by the number of casemix adjusted separations.

(b) Psychiatric hospitals, drug and alcohol services, mothercraft hospitals, unpeered and other, hospices, rehabilitation facilities and small non-acute and multi-purpose services are excluded from this table.

(c) Where possible, capital and separations data relate to inpatients in public acute hospitals. Where jurisdictions have not been able to distinguish outpatient capital data an IFRAC has been applied as a proxy.

(d) For years other than 1999-2000, NSW asset values and depreciation amounts are for inpatients in acute hospitals. A fraction of 0.547 was applied to the reported asset values and depreciations for NSW Health.

(e) Asset values and depreciation amounts are for acute inpatients in acute hospitals.

Table 5A.24 **Capital cost per casemix adjusted separation — indicative estimates for inpatient services at major public acute hospitals (a), (b), (c)**

	<i>Unit</i>	<i>NSW (d) (f)</i>	<i>Vic (e)</i>	<i>Qld (f)</i>	<i>WA (f)</i>	<i>SA (f), (g)</i>	<i>Tas (f)</i>	<i>ACT (f)</i>	<i>NT (f) (h)</i>
(f)	For 1998-1999, Queensland, WA, SA, Tasmanian, and the ACT asset values and depreciation amounts are for all patients in acute hospitals. An IFRAC is used here to calculate the data for inpatients. For 1999-2000, NSW, WA, SA, Tasmanian, the ACT and the NT asset values and depreciation amounts are for all patients in acute hospitals. An IFRAC is used here to calculate the data for inpatients.								
(g)	SA data are correct. South Australia is currently undertaking processes to redefine the requirements for the classification and collection of asset management data.								
(h)	NT is on a cash accounting regime and was unable to provide asset values and depreciation amounts except for 1999-2000.								
(j)	The asset value and depreciation amounts are based on Queensland Health outputs allocation information for inpatients services in acute hospitals.								
(k)	Sourced from Australian Institute of Health and Welfare 2001, <i>Australian Hospital Statistics 1999-2000</i> , cat. no. HSE 14, Canberra.

(a) Excludes depreciation.

(b) Psychiatric hospitals, drug and alcohol services, mothercraft hospitals, unpeered and other hospices, rehabilitation facilities, small non-acute and multi-purpose services are excluded.

(c) Tasmania is the only jurisdiction with a significant payroll tax burden. As a result, payroll tax has been estimated at 6.7 per cent of salary plus superannuation and removed from the above.

(d) These figures need to be interpreted in conjunction with the consideration of cost disabilities associated with hospital service delivery in the NT.

(e) Separations from the National Hospital Morbidity Database whose type of episode of care is acute, newborn with qualified days or unspecified.

(f) Average cost weight from the National Hospital Morbidity Database, based on acute and unspecified separations and newborn episodes of care with qualified days, using the 1999-2000 AR-DRG v 4.0/4.1 combined cost weights DHAC (unpublished).

(g) Casemix-adjusted separations is the product of total separations and average cost weight.

Table 5A.27 Recurrent cost per casemix-adjusted separation, selected public hospitals (a) (b)

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas (c)</i>	<i>ACT</i>	<i>NT (d)</i>	<i>Aust (o)</i>
(h)	None of the selected hospitals above have had their admitted patient proportion estimated by the HASAC ratio.									
(i)	Eligible public patient days as a proportion of total patient days, excluding newborns with no qualified days.									
(j)	In the NT, superannuation costs have been provided for three hospitals but are missing for two.									
(k)	Queensland pathology services are now being purchased from the statewide pathology service rather than being provided by each hospitals' employees.									
(l)	Estimated private patient medical costs calculated as the sum of salary/sessional and VMO payments divided by the number of public patient days multiplied by the number of private patient days.									
(m)	Data for 1996-97 exclude psychiatric hospitals, drug and alcohol services, mothers and babies facilities, dental hospitals and same day facilities. Around 2.5 per cent of separations are excluded, although the proportion differs across jurisdictions.									
(n)	Data for 1997-98 exclude psychiatric hospitals, drug and alcohol services, mothercraft hospitals, dental hospitals, hospices, rehabilitation facilities and multi-purpose services and hospitals satisfying the NSW definition of community non-acute hospitals.									
(o)	Data for Australia as presented in AIHW (2001) <i>Australian Hospital Statistics 1999-00</i> .

Total recurrent expenditure	\$m 4 530	3 346
Total admitted patient expenditure	\$m 3 304	2 365
<i>Costs relating to acute (excluding psychiatric unit) separations</i>		
Average cost weight(e)	1.050	0.991
Casemix-adjusted acute separations	'000 1 189	915
Acute non-psychiatric admitted patient fraction(d)	0.669	0.615
Total acute patient (excluding psychiatric patient) recurrent expenditure	\$m 3 030	2 058
Cost per casemix-adjusted acute separation (excluding psychiatric unit expenditures)	2 549	2 249
Cost per total casemix-adjusted separation	\$ 2 777	2 511
Proportion exceeding cost per acute separation (excluding psychiatric unit expenditures)	0.082	0.104

(a) Excludes psychiatric, mothercraft, hospices, small non-acute, unpeered and other hospitals, rehabilitation facilities and multi-purpose services.

(b) From the National Hospital Morbidity Database. Details of acute separations and bed days compared to non-acute separations and bed days are presented in Table A4.1 of *Australian Hospital Statistics 1999-2000*.

(c) Acute separations are separations where the type of episode of care is acute, newborn with qualified days, or unspecified. Psychiatric unit separations are those psychiatric separations with at least some days in designated psychiatric units.

(d) The acute non-psychiatric admitted patient fraction is that portion of recurrent costs which are for acute admitted patients and which exclude the costs of psychiatric care in a designated psychiatric unit.

(e) Average cost weight from the National Hospital Morbidity Database, based on acute and unspecified separations and newborn episodes of care with qualified days, using the 1999-00 AR-DRG version 4.0/4.1 combined cost weights (DHAC 2001).

Note: The Cost per non-acute separation and including psychiatric unit separations is \$5711 for NSW and \$6303 for Victoria.

(a) Expenditure data exclude depreciation.

(b) Some data reported at network level. Networks can contain smaller, specialised and non-acute hospitals.

(c) Exclude a few small hospitals with missing expenditure data.

(d) Average cost weight from the National Hospital Morbidity Database, based on acute and unspecified separations and newborn episodes of care with qualified days, using the 1999–00 AR-DRG v 4.0/4.1 combined cost weights (DHAC 2002).

(e) Psychiatric hospitals consist of a mix of short term acute, long term, psychogeriatric and forensic psychiatric hospitals, so cannot be compared easily with each other; eg the Victorian psychiatric hospital is a forensic psychiatric hospital and has a quite different patient and cost profile to many of the other psychiatric hospitals in this group. High cost per separation for Queensland hospitals in this group partly because Queensland do not truncate very long lengths of stays to 366 days as some other States do.
