Subject: WinLink Nonmarine Support

A possible source of additional WinLink support might be land based, as well as marine, use. WinLink would be useful for people who are visiting, working, or doing search and rescue in the outback. I'm sure there are many radio amateurs who fall into one or more of those categories, especially WICEN members.

The APRS function might be especially valuable in tracking SAR assets, while the Email function would enhance control of them.

WICEN might be a valuable partner in enabling WinLink.

Bob
