

Dear Sirs,

please let me comment on
<http://www.pc.gov.au/inquiry/radiocomms/subs/sub301.pdf>
that

- there is not any software able to monitor compressed WinLink 2000 traffic,
not in the public domain, not anywhere else, not from the "WinLink
Developement Team".

I guess they would not supply You with that... they like to hide "private"
mails in the public Amateur Radio service. That's it.

- my other arguments against Win Link have not been rejected.

Please draw Your own conclusions. Thank You.
