Time series data for childhood immunisation rates are available for NSW, Victoria, WA, SA and the NT. (Data from the ACT, Queensland and Tasmania were not available prior to 2011 due to data quality issues with reporting of Indigenous identification.) For these five jurisdictions combined, the largest increase in vaccination coverage rates occurred for 5 year olds, with the proportion increasing for Aboriginal and Torres Strait Islander children from 2008 to 2015 by around 20 percentage points (and around 14 percentage points for other children over the same period) (table 8A.1.30)³. From 2001 to 2015, rates increased for 1 year olds for both Aboriginal and Torres Strait Islander and other children. Over the same period, there was no statistically significant change for 2 year old children. Childhood immunisation data reported by State and Territory are available in tables 8A.1.31–45.

Data on immunisation rates for Aboriginal and Torres Strait Islander Australians aged 50 years and over are also available by age in table 8A.1.46.

Expenditure on health care services

Expenditure per person on health services provides an indication of the relative use of health care services by Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians. Comparisons of expenditure require consideration of relative need. For example, chronic diseases are expensive to treat, and Aboriginal and Torres Strait Islander Australians have higher rates of chronic disease than non-Indigenous Australians (AIHW 2014). Section 4.9 includes information on rates of chronic disease.

In addition, investment in primary health care in remote areas is costly compared with metropolitan settings, however the alternative hospital-based care is even more expensive and using it in place of primary health care results in poorer health outcomes. A recent NT

³ Fully vaccinated status for five year olds is only available from 2008, prior to this data are reported for 6 year olds, due to changes in reporting practices.

study showed that improving use of primary health care would not only yield better health outcomes for patients with diabetes, but would be cost-effective (Thomas, Zhao and Wakerman 2014).

For this report, there are no updated expenditure data available – AIHW *Expenditures on Health for Aboriginal and Torres Strait Islander Peoples 2010-11* data reported were included in the previous edition of this report. Caution should be used in interpreting these data, due to issues around incomplete recording of Indigenous status and limitations of financial recording systems (AIHW 2013).

For 2010-11, total expenditure on health care from government and non-government sources (including insurance) for Aboriginal and Torres Strait Islander Australians:

- was \$7995 per person, compared with \$5437 per non-Indigenous Australian (table 8A.1.47). This expenditure was highest on hospitals for both Aboriginal and Torres Strait Islander Australians (\$3826 per person) and non-Indigenous Australians (\$2169 per person), followed by community health services for Aboriginal and Torres Strait Islander Australians (\$1967 per person) and medical services for non-Indigenous Australians (\$1011 per person) (table 8A.1.47)
- for primary health services was \$3602 per person, compared with \$2447 per non-Indigenous Australian (table 8A.1.48). Across primary health services, expenditure per person was highest on community health services (\$1967) for Aboriginal and Torres Strait Islander Australians, followed by medical services (\$406). For non-Indigenous Australians, primary health expenditure per person was highest for medications (\$751) followed by medical services (\$626) (table 8A.1.48).

The Aboriginal and Torres Strait Islander health workforce

Due to cultural differences, language barriers and racism experienced when accessing some mainstream health services, some Aboriginal and Torres Strait Islander Australians feel more comfortable seeing Aboriginal and Torres Strait Islander health professionals and accessing Aboriginal Community Controlled Health services.

The most recent population level data (in respect of 2011) show that although Aboriginal and Torres Strait Islander Australians make up around 3 per cent of the Australian population (ABS 2013), they comprise only 1.3 per cent of people working in health-related occupations. Additional data on employment data across the health workforce are provided by occupation in table 8A.1.49.

In 2014, there were 322 registered Aboriginal and Torres Strait Islander health practitioners, 83 per cent of whom were employed in the Aboriginal health services field,

however this is well below numbers required to provide parity with representation in the community (AIHW 2016)⁴

As many Aboriginal and Torres Strait Islander Australians needing health care will be treated by non-Indigenous health professionals, it is important that non-Indigenous health professionals treating Aboriginal and Torres Strait Islander Australians are trained to deliver safe and culturally responsive care.

Increasing the number of Aboriginal and Torres Strait Islander health workers, requires similar improvements in educational outcomes to those needed for improvement in Aboriginal and Torres Strait Islander employment more generally. Sections 4.6, 4.7, 4.8, chapter 7 and section 9.1 provide more information on education and employment outcomes and case studies of successful programs.

These data differ from the broader count in the 2011 Census where 1256 Aboriginal Health Workers were reported (see table 8A.1.49).

8.2 Potentially preventable hospitalisations⁵

Box 8.2.1 Key messages

Nationally in 2014-15, after adjusting for differences in population age structures, the hospitalisation rate:

- for *chronic* conditions for Aboriginal and Torres Strait Islander Australians was more than three times the rate for non-Indigenous Australians. Chronic obstructive pulmonary diseases (progressive lung diseases) accounted for the largest proportion across both population groups, with the rate for Aboriginal and Torres Strait Islander Australians five times the rate for non-Indigenous Australians (table 8A.2.1)
- for *acute* conditions for Aboriginal and Torres Strait Islander Australians was around 2.5 times the rate for non-Indigenous Australians (table 8A.2.5)
- for *vaccine* preventable conditions for Aboriginal and Torres Strait Islander Australians was 3.5 times the rate for non-Indigenous Australians for influenza and pneumonia, and 8.0 times the rate for non-Indigenous Australians for other vaccine preventable conditions (table 8A.2.7)
- increased as remoteness increased for chronic and acute conditions (with a similar trend for non-Indigenous Australians), whilst for vaccine preventable conditions the rate was highest for Aboriginal and Torres Strait Islander Australians in remote areas but highest for non-Indigenous Australians in major cities (tables 8A.2.4, 8A.2.6 and 8A.2.8).

Box 8.2.2 Measures of potentially preventable hospitalisations

Potentially preventable hospitalisations are those admissions that may have been prevented through appropriate preventive health interventions and early disease management, usually delivered in primary care and community-based care settings.

There are three main measures for this indicator, relating to the rate of hospitalisation per 100 000 population for:

- potentially preventable chronic conditions — diseases that typically persist for at least six months (including specific tables on type 2 diabetes mellitus)
- potentially preventable acute conditions — diseases that cause serious short-term illness that could possibly be prevented, or their severity minimised
- vaccine preventable conditions — including influenza and pneumonia.

Data for all measures are sourced from the AIHW National Hospital Morbidity Database, with the most recent data available for 2014-15 (national by remoteness). Additional data are reported on the rate of hospitalisation for injury, poisoning and other external causes, and sexually transmitted conditions, that could potentially have been prevented (national by remoteness).

(continued next page)

⁵ The Steering Committee notes its appreciation to the National Health Leadership Forum, which reviewed a draft of this section of the report.

Box 8.2.2 (continued)

Data presented in this report are not comparable to previous reports due to the application of a change in coding in 2015 to more accurately reflect categories of potentially preventable hospitalisations. Historical data included in this report have been revised on this new basis.

Potentially preventable hospitalisations are increasingly used internationally as an indicator of access to primary care and its effectiveness, and as a measure of the potential health gains from primary care interventions (Kruger and Tennant 2015). In many cases, hospital admissions can be prevented if more effective non-hospital care is available, either at an earlier stage in disease progression or as an alternative to hospital care (AHMAC 2015; Katterl et al. 2012; Russell 2013). However, higher rates of potentially preventable hospitalisations may also be due to higher prevalence of the underlying diseases, particularly chronic diseases (AIHW 2014).

Aboriginal and Torres Strait Islander Australians have a higher rate of potentially preventable hospitalisations than non-Indigenous Australians (Katterl et al. 2012). Even after controlling for age, sex and remoteness, the rate of potentially preventable hospitalisation for Aboriginal and Torres Strait Islander Australians is 1.5 times as high as the rate for non-Indigenous Australians. Indigenous status appears to have a larger affect than remoteness on whether a hospitalisation was for a potentially preventable disease (AIHW 2014).

For this indicator, potentially preventable hospitalisations data are presented for 2010-11 to 2014-15. From 2010-11 all jurisdictions were considered to have acceptable quality of Aboriginal and Torres Strait Islander and non-Indigenous identification for this indicator. Potentially preventable hospitalisations data presented in this report are not comparable to previous reports due to the application of a change in coding in 2015 to more accurately reflect categories of potentially preventable hospitalisations. Historical data included in this report have been revised on this new basis.

Potentially preventable chronic conditions

In 2014-15, hospitalisations for potentially preventable chronic⁶ conditions comprised 3.2 per cent of all hospitalisations for Aboriginal and Torres Strait Islander Australians, and 2.9 per cent for non-Indigenous Australians (8A.2.1).

In 2014-15, after adjusting for differences in population age structures, the hospitalisation rate for chronic conditions for Aboriginal and Torres Strait Islander Australians was more than three times the rate for non-Indigenous Australians (table 8A.2.1). For both Aboriginal and Torres Strait Islander and non-Indigenous Australians, the hospitalisation

⁶ Diseases that would typically persist for at least six months.

rate increased as remoteness increased, with the rate for Aboriginal and Torres Strait Islander Australians in remote areas twice the rate in major cities (table 8A.2.2).

Figure 8.2.1 Potentially preventable hospitalisations for chronic conditions, 2014-15^a

^a Data are age standardised.

Source: AIHW (unpublished) National Hospital Morbidity Database; table 8A.2.1.

Nationally in 2014-15, for both Aboriginal and Torres Strait Islander and non-Indigenous Australians, chronic obstructive pulmonary diseases⁷ accounted for the highest rate of hospitalisations for preventable conditions, with the rate for Aboriginal and Torres Strait Islander Australians five times the rate for non-Indigenous Australians. For Aboriginal and Torres Strait Islander Australians this was followed by hospitalisations for diabetes as principal diagnosis⁸ (figure 8.2.1). Additional data on Type 2 diabetes by complication are in tables 8A.2.3–4.

From 2010-11 to 2014-15, hospitalisation rates for both Aboriginal and Torres Strait Islander and non-Indigenous Australians have fluctuated with no clear trend (table 8A.2.1).

⁷ Chronic obstructive pulmonary diseases (COPD) is an umbrella term used to describe progressive lung diseases. Smoking (including second-hand smoke) is a risk factor for COPD.

⁸ This refers to diabetes type 1 and type 2. In previous reports diabetes complications accounted for the largest proportion of hospitalisations for preventable chronic conditions. To align with National Health Agreement coding changes in 2015 for chronic conditions, principal diagnosis only is counted for diabetes, where previously additional diagnosis was also included, which has reduced the recorded rate for this report.

Potentially preventable acute conditions

In 2014-15, after adjusting for differences in population age structures, the hospitalisation rate for potentially preventable acute conditions⁹ for Aboriginal and Torres Strait Islander Australians was more than twice the rate for non-Indigenous Australians (table 8A.2.5). For both Aboriginal and Torres Strait Islander and non-Indigenous Australians, the hospitalisation rate for potentially preventable acute conditions increased as remoteness increased, with the rate for Aboriginal and Torres Strait Islander Australians in remote areas 2.5 times the rate in major cities (table 8A.2.6).

Vaccine preventable conditions

In 2014-15, after adjusting for differences in population age structures, the hospitalisation rate for Aboriginal and Torres Strait Islander Australians for influenza and pneumonia was 3.5 times the rate for non-Indigenous Australians, and for other vaccine preventable conditions was 8.0 times the rate for non-Indigenous Australians (table 8A.2.7).

Hospitalisations for vaccine preventable conditions were highest in remote areas for Aboriginal and Torres Strait Islander Australians but were highest in major cities for non-Indigenous Australians (table 8A.2.8).

Other hospitalisations

Available data for hospitalisations for infections with a predominantly sexual mode of transmission show that, in 2014-15, hospitalisation rate for Aboriginal and Torres Strait Islander Australians for these infections was more than seven times the rate for non-Indigenous Australians (table 8A.2.9).

Hospitalisations for infections with a predominantly sexual mode of transmission increased with remoteness for Aboriginal and Torres Strait Islander Australians (in 2014-15, the rate in remote areas was 3.5 times the rate in regional areas and six times the rate in major cities), but there was no clear trend across remoteness areas for non-Indigenous Australians (table 8A.2.10).

Hospitalisations where the principal diagnosis was injury and poisoning and other consequences of external causes, may be prevented by both appropriate primary health care, and improved safety and awareness¹⁰. In 2014-15, hospitalisation rates for Aboriginal and Torres Strait Islander Australians for these causes were almost twice the rate for non-Indigenous Australians (table 8A.2.11). Data are also available by remoteness,

⁹ Relate to serious short-term illness and could possibly be prevented or severely minimised, through access to effective primary health care services.

¹⁰ Hospitalisations do not include episodes of care for non-admitted patients treated in hospital emergency departments or outpatient clinics.

showing much higher hospitalisation rates for Aboriginal and Torres Strait Islander Australians in remote areas (table 8A.2.12).

8.3 Potentially avoidable deaths¹¹

Box 8.3.1 Key messages

Reducing potentially avoidable deaths is a key contributor to increasing life expectancy.

For people aged under 75 years:

- between 1998 and 2014, after adjusting for differences in population age structures, mortality rates from avoidable causes for Aboriginal and Torres Strait Islander Australians declined at a greater rate than for non-Indigenous Australians. The gap has narrowed from 319.2 deaths to 242.7 deaths per 100 000 population. However, in 2014, the avoidable death rate for Aboriginal and Torres Strait Islander Australians remained over 3 times the rate for non-Indigenous Australians (figure 8.3.1)
- for the period 2010–2014, around 60 per cent of Aboriginal and Torres Strait Islander deaths were potentially avoidable (6182 out of 10155 deaths), compared to 50 per cent of non-Indigenous deaths (86232 out of 172307 deaths) (table 8A.3.5)
- for the period 2010–2014, the most common causes of avoidable mortality for Aboriginal and Torres Strait Islander Australians were ischaemic heart disease (heart attacks) (21.6 per cent), diabetes (12.5 per cent) and suicide (10.4 per cent) (table 8A.3.3).

Box 8.3.2 Measures of potentially avoidable deaths

There is one main measure for this indicator.

- *Potentially avoidable deaths* is defined as the number and rate of deaths from potentially preventable and treatable conditions¹² for people aged less than 75 years (NSW, Queensland, WA, SA and the NT; age and sex).

Data for this measure are sourced from the ABS Causes of Death collection, with the most recent available data for 2014. People aged 75 years and over are excluded due to difficulty in assigning a cause of death that can be clearly defined as avoidable or unavoidable.

Reducing potentially avoidable deaths is a key contributor to increasing life expectancy (section 4.1). Potentially avoidable deaths can be reduced through lifestyle improvements (such as reduced alcohol (section 11.1), drug (section 11.2) and tobacco consumption (section 8.4)), high quality, effective and accessible primary prevention, early intervention and medical treatment, and is closely related to measures of access to primary health care (section 8.1) and potentially preventable hospitalisations (section 8.2).

Research into mortality trends over the last three decades in Australia shows that health care has made a significant contribution to the reduction in mortality, but that those with a

¹¹ The Steering Committee notes its appreciation to the National Health Leadership Forum, which reviewed a draft of this section of the report.

¹² A list of causes for potentially avoidable deaths is available in table 8A.3.6.

higher socioeconomic status have obtained a greater benefit (Korda et al., 2007). This may be because factors outside the health system also contribute to potentially avoidable deaths, including socioeconomic factors (education, employment and income — see chapters 7, and 9); lifestyle factors (illicit substance use, obesity and lack of nutrition — see sections 8.4, 8.5, 11.1 and 11.2); environmental factors (lack of clean water and sanitation — see section 10.3) and exposure to abuse, neglect and violence (sections 4.11, 4.12 and 11.3).

Potentially avoidable deaths

Mortality rates for potentially avoidable causes are defined as the number of deaths per 100 000 population. The following caveats apply:

- five year aggregate data are used for current period analysis due to the volatility of the small number of deaths. Single year data are presented for time series analysis only
- data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Aboriginal and Torres Strait Islander identification and numbers of deaths to support analysis.

Current period

For the period 2010–2014, after adjusting for differences in population age structures, the potentially avoidable mortality rate for Aboriginal and Torres Strait Islander Australians aged 0–74 years was over three times the rate for non-Indigenous Australians.

From 15 years of age, potentially avoidable mortality increased with age for both Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians (for those aged 15–24 years, 78.2 and 27.2 deaths per 100 000 population respectively, whilst for those aged 65–74 years, 1586.5 and 578.8 deaths per 100 000 population respectively). Aboriginal and Torres Strait Islander males had higher rates of avoidable mortality than females across all age categories (except for the 1–4 year age group), with the rates for males aged 15–24 and 25–34 years around twice the rates for females of the same ages (table 8A.3.2). Potentially avoidable mortality data reported by selected states and territories are available in table 8A.3.1.

Over time

Potentially avoidable death rates for Aboriginal and Torres Strait Islander Australians are declining over the longer term. From 1998 to 2014, after adjusting for differences in population age structures, Aboriginal and Torres Strait Islander mortality rates from avoidable causes for people aged 0–74 years declined by 31.7 per cent, with a larger decline for males (33.2 per cent) than for females (29.7 per cent) (table 8A.3.4).

Figure 8.3.1 **Avoidable mortality rates, people aged 0–74 years, NSW, Queensland, WA, SA and the NT, 1998 to 2014^{a, b}**

^a Mortality data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Aboriginal and Torres Strait Islander identification and numbers of deaths to support analysis. They do not represent an Australian total. ^b Data are age standardised.

Sources: ABS (unpublished) Causes of Death, Australia; ABS (unpublished) Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026; table 8A.3.4.

From 1998 to 2014, after adjusting for differences in population age structures, the gap in potentially avoidable mortality rates between Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians narrowed from 319.2 to 242.7 deaths per 100 000 population (figure 8.3.1). The percentage decrease in avoidable mortality rates was larger for non-Indigenous Australians (43.2 per cent) than for Aboriginal and Torres Strait Islander Australians (31.7 per cent), but as the non-Indigenous rate was lower the gap narrowed (table 8A.3.4).

Causes of avoidable mortality

For 2010–2014, the most common causes of avoidable mortality for Aboriginal and Torres Strait Islander Australians aged 0–74 years were ischaemic heart disease (heart attacks) (21.6 per cent), diabetes (12.5 per cent) and suicide (10.4 per cent) (table 8A.3.3). After adjusting for differences in population age structures, the mortality rate for Aboriginal and Torres Strait Islander Australians from diabetes is 12 times the rate for non-Indigenous Australians — followed by ischemic heart disease and suicide at 4 times and 2 times the rates for non-Indigenous Australians (figure 8.3.2).

Figure 8.3.2 **Avoidable mortality, by selected cause of death, people aged 0–74 years, NSW, Queensland, WA, SA and the NT, 2010–2014^{a, b, c}**

^a Mortality data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Aboriginal and Torres Strait Islander identification and numbers of deaths to support analysis. They do not represent an Australian total. ^b Data are only reported in this figure for selected causes of avoidable mortality based on the most common causes for Aboriginal and Torres Strait Islander Australians. ^c Data are age standardised.

Source: ABS (unpublished) Causes of Death, Australia; table 8A.3.3.

Things that work

For Aboriginal and Torres Strait Islander Australians, chronic diseases and injury (section 4.9) account for the greatest proportions of avoidable deaths, but are amenable to prevention as well as treatment. Whilst there are no evaluated programs, an historical cohort study by Zhao et al (2014) for the period 2002 to 2011, found increased levels of primary care utilisation by Aboriginal and Torres Strait Islander people in remote communities in the NT was cost effective in reducing hospitalisations and deaths from common chronic diseases including renal disease, chronic obstructive pulmonary disease, diabetes and ischemic heart disease. The study found a 59–75 per cent reduction in deaths with medium/high primary healthcare utilisation, compared to low primary healthcare utilisation.

8.4 Tobacco consumption and harm¹³

Box 8.4.1 Key messages

- Between 2001 and 2014-15, the crude daily smoking rate for Aboriginal and Torres Strait Islander adults declined from 50.7 to 41.4 per cent (table 8A.4.1).
- A similar decline in non-Indigenous smoking rates meant that the gap in (age-adjusted) daily smoking rates remained relatively constant at around 26 percentage points between 2001 and 2014-15 (table 8A.4.7).

Box 8.4.2 Measures of tobacco consumption and harm

There is one main measure for this indicator (aligned with the associated NIRA indicator), rates of current daily smokers, measured by the proportion of people aged 18 years and over who are current daily smokers (all jurisdictions; remoteness; age; sex).

Smoking rate data are available from the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent data available from the 2014-15 NATSISS. Data for the non-Indigenous population are sourced from the ABS Australian Health Survey (AHS)/National Health Survey (NHS), with the most recent data available from the 2014-15 NHS.

Previous editions of this report included a supplementary measure on tobacco-related hospitalisations. This is no longer included as the measure only related to conditions directly attributable to tobacco — not most conditions, where tobacco may be a contributing factor but the link is not immediate. Data are also difficult to interpret as they represent less than one per cent of all Aboriginal and Torres Strait Islander hospitalisations and are therefore highly volatile over time.

Tobacco consumption is a subsidiary performance measure for COAG's target of 'closing the life expectancy gap (between Indigenous and non-Indigenous Australians) within a generation' (COAG 2012).

In Australia, up to two-thirds of deaths in current smokers can be attributed to smoking (AHMAC 2015). Among Aboriginal and Torres Strait Islander Australians, tobacco use is the leading risk factor contributing to disease and death (Vos et al. 2007). Studies have found that smoking tobacco increases the risk of developing numerous cancers, heart and vascular diseases, and depression (AHMAC 2012; Cunningham et al. 2008; Pasco et al. 2008). Smoking in pregnancy can lead to miscarriage, stillbirth or premature birth (Graham et al. 2007). Section 6.2 includes information on women reporting smoking during pregnancy.

¹³ The Steering Committee notes its appreciation to the National Health Leadership Forum, which reviewed a draft of this section of the report.

Compared to non-Indigenous people, Aboriginal and Torres Strait Islander Australians who smoke generally commence at an earlier age and smoke for longer (CEITC 2010, 2014). Recent research (Knott et al. 2016) suggests also there may be fundamental differences in the determinants of smoking and the reasons for quitting, between Aboriginal and Torres Strait Islander men and women.

Research has found that the proportion of Aboriginal and Torres Strait Islander adults who want to quit smoking and those who have made a quit attempt in the past year, are similar to the general population. However fewer Aboriginal and Torres Strait Islander adults have made a sustained quit attempt for at least a month and a lower proportion agree that social norms disapprove of smoking, compared to the general population (Thomas et. al 2015).

Tobacco use is often associated with other lifestyle related health risk factors, such as excessive alcohol consumption and poor diet. Long term risky/high risk drinkers (both males and females) were more likely to be current smokers than those who drank at a low risk level (ABS 2006). Section 11.1 examines alcohol consumption and harm.

In Australia and many other countries smoking behaviour is inversely related to socioeconomic status, with those in disadvantaged groups in the population more likely to start and continue smoking. In addition to long-term health risks, low income groups (such as some Aboriginal and Torres Strait Islander families and communities) are affected by the financial strain associated with tobacco use (Greenhalgh 2015). A recent study in NSW found that more disadvantaged areas were significantly more likely to have higher tobacco outlet densities, with this density significantly and positively associated with smoking status (Marashi-Pour 2015).

Tobacco consumption

Current daily smokers are people who smoked one or more cigarettes (or pipes or cigars) per day at the time of survey interview.

The COAG performance measure and the data presented in this section focus on the proportion of people aged 18 years and over who are current daily smokers. However, as noted, Aboriginal and Torres Strait Islander Australians tend to start smoking at an earlier age than non-Indigenous people — for 2014-15, in non-remote areas around one in six (16.2 per cent) Aboriginal and Torres Strait Islander 15 to 17 year olds were current daily smokers, compared with one in thirty (3.3 per cent) non-Indigenous 15 to 17 year olds (table 8A.4.12).

Nationally in 2014-15, the crude daily smoking rate among Aboriginal and Torres Strait Islander adults was 41.4 per cent, a decline from 50.7 per cent in 2001 (table 8A.4.1). Rates varied across states and territories in 2014-15, from 38.8 per cent in SA to 46.2 per cent in the NT (table 8A.4.1). Smoking rates were higher in remote and very remote areas (49.3 per cent and 48.9 per cent) than in major cities (36.3 per cent) (table 8A.4.2). In non-remote areas in 2014-15, smoking was most prevalent among those aged 25–54 years

(between 45.4 and 46.5 per cent), with smoking rates much lower for older people (31.3 per cent for those aged 55 years and over). A similar pattern was observed for non-Indigenous Australians, although the daily smoking rates were consistently lower across all age groups (table 8A.4.12).

After adjusting for different population age structures, in 2014-15 the current daily smoking rate for Aboriginal and Torres Strait Islander Australians was 2.8 times the rate for non-Indigenous Australians (table 8A.4.7). The gap in smoking rates was widest in remote areas (table 8A.4.8).

Figure 8.4.1 Current daily smokers aged 18 years and over, 2001 to 2014-15^{a, b}

^a Error bars represent 95 per cent confidence intervals around each estimate. ^b Rates are age standardised.

Sources: ABS (unpublished) National Health Survey 2001; ABS (unpublished) National Health Survey and National Aboriginal Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal Torres Strait Islander Social Survey 2008; ABS (unpublished) National Health Survey 2007-08; ABS (unpublished) Australian Aboriginal Torres Strait Islander Health Survey 2012-13 (core component); ABS (unpublished) Australian Health Survey 2011-13 (2011-12 core component); ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey, 2014-15; ABS (unpublished) National Health Survey, 2014-15; table 8A.4.7.

Between 2001 and 2014-15, after adjusting for differences in population age structures, the daily smoking rate declined for both Aboriginal and Torres Strait Islander adults and non-Indigenous adults, leaving the gap relatively unchanged at around 26 percentage points (figure 8.4.1).

Data for smoking rates reported by State and Territory are available by remoteness in tables 8A.4.2-6 and 8A.4.8-10 and by sex in tables 8A.4.11-12.

Things that work

There is no published robust evaluation of an intervention resulting in a decrease in the prevalence of tobacco smoking for Aboriginal and Torres Strait Islander people (Minichiello et al 2016). A systematic review of 73 interventions in indigenous communities globally found that there was no single intervention that was more likely to result in a reduction in tobacco use, but rather that more successful programs:

- use a comprehensive approach inclusive of multiple activities
- centre Aboriginal leadership
- make long-term community investments
- provide culturally appropriate health materials and activities to produce desired changes (Minichiello et al. 2016).

Research from the national *Talking About The Smokes* project also highlighted the importance of taking a comprehensive approach to tobacco control, reporting that a broad range of factors were associated (positively and negatively) with the desire by Aboriginal and Torres Strait Islander smokers to quit (Nicholson et. al 2015).

8.5 Obesity and nutrition¹⁴

Box 8.5.1 Key messages

- In 2014-15, 69.8 per cent of Aboriginal and Torres Strait Islander children aged 2–14 years were meeting the guidelines for adequate daily fruit intake, slightly lower than the rate for non-Indigenous children (74.1 per cent). The proportions meeting the guidelines for adequate daily vegetable intake were much lower — 7.4 per cent for Aboriginal and Torres Strait Islander children and 5.5 per cent for non-Indigenous children (table 8A.5.13).
- In 2012-13, 69.2 per cent of Aboriginal and Torres Strait Islander adults were categorised as clinically obese (39.8 per cent) or overweight (29.4 per cent). Only 27.7 per cent were considered to be of normal weight (table 8A.5.8). After adjusting for different population age structures, the proportion of Aboriginal and Torres Strait Islander adults categorised as overweight or obese was 1.2 times the proportion for non-Indigenous adults (table 8A.5.2).

Box 8.5.2 Measures of obesity and nutrition

There is one main measure for this indicator (aligned with the associated NIRA indicator). *Overweight and obese* is defined as the number of people aged 18 years and over with a BMI in the range 25.0–29.9 (overweight) or 30 or higher (obese) as a proportion of the total population. Additional data are also reported for people with a BMI of 18.5–24.9 (normal weight) and with a BMI of less than 18.5 (underweight) (all jurisdictions; remoteness; sex; age). The data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS) with the most recent data for 2012-13. Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS) with the most recent data for 2011–13. BMI data for 2012-13 are not directly comparable with earlier data for 2004-05.

Data are also provided for a supplementary measure defined as the proportion of children aged 2–14 years meeting the recommended average daily fruit and vegetable consumption guidelines (national; remoteness; age). Data for the Indigenous population are sourced from the ABS AATSIHS/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent data available from the 2014-15 NATSISS. Data for the non-Indigenous population are sourced from the ABS AHS/National Health Survey (NHS), with the most recent data from the 2014-15 NHS.

The prevalence of overweight and obesity is a subsidiary performance measure for COAG's target of 'closing the life expectancy gap (between Indigenous and non-Indigenous Australians) within a generation' (COAG 2012).

For Aboriginal and Torres Strait Islander Australians, high body mass and physical inactivity are two significant risk factors for poor health outcomes (Thorpe and Browne 2009).

¹⁴ The Steering Committee notes its appreciation to the National Health Leadership Forum, which reviewed a draft of this section of the report.

Excess weight increases the risk of an individual developing, among other things, cardiovascular disease, Type 2 diabetes, some musculoskeletal conditions and some cancers (AIHW 2013). Research suggests that the excess burden of overweight and obesity for Aboriginal and Torres Strait Islander Australians reduces the average life expectancy by between one and three years, accounting for 9 to 17 per cent of the total gap in life expectancy between Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians (Zhao et al. 2013).

Lifestyle factors including a lack of physical activity, sedentary time and poor dietary intake are all well established as major contributors to obesity (NHMRC 2013; Sanders et al. 2015).

Good nutrition contributes to quality of life and helps to maintain a healthy body weight, protect against infections, and reduce the risk of chronic disease and premature deaths. Studies have found that people on low incomes tend to purchase foods that provide the most calories for the least cost, such as soft drinks (Brimblecombe and O’Dea 2009; Brownell and Frieden 2009; Harrison et al. 2007; WHO 2008). Low income, in combination with the high cost of fresh food, contributes to obesity, poor nutrition and the displacement of healthy food choices in remote Aboriginal communities. (Section 4.10 provides more information on incomes.)

Regular physical activity and intake of a nutritious diet commensurate with energy requirements can have a protective effect against obesity related diseases (AMA 2005; NHMRC 2013). Section 5.7 provides more information on participation in organised sport, arts or community group activities. Good nutrition is important during pregnancy (see section 6.1, Antenatal care) because pathways to chronic diseases can begin in utero (O’Dea 2008; WHO 2005). Low birthweight (see section 6.4) is associated with a higher risk of central obesity, type 2 diabetes, kidney failure, high blood pressure, and heart disease in later life. Good nutrition is also important for infant and childhood growth and development and for establishing healthy habits for life (ARACY 2008; Eades et al. 2010; Tomkins 2001; WHO 2008).

Inadequate housing in remote areas compounds the issue of providing a well-balanced daily diet (House of Representatives 2009; Lee et al. 2009). In one community, less than six per cent of houses had essential kitchen hardware for the storage and preparation of food (Lee et al. 2009). Section 10.3 provides more information on housing infrastructure.

Research shows that it becomes more difficult to get on track towards a healthy weight as age increases, emphasising the importance of early prevention, to avoid the development of overweight and obesity (FaHCSIA 2013). Education has an important role in establishing health behaviours and the readiness of individuals to effect behavioural change (NHMRC 2013).

Obesity

Obesity is most commonly measured using the body mass index (BMI). BMI is calculated as weight (kg) divided by the square of height (m). BMI values are grouped according to World Health Organization and National Health and Medical Research Council guidelines. Adults with a BMI of 25 to less than 30 are categorised as overweight and those with a BMI of 30 or higher are categorised as obese (NHMRC 2013; WHO 2000).

Nationally in 2012-13, 69.2 per cent of Aboriginal and Torres Strait Islander adults were considered to be obese (39.8 per cent) or overweight (29.4 per cent). Only 27.7 per cent were considered to be of normal weight. Rates of overweight were higher for males (32.3 per cent) than females (26.6 per cent) but rates of obesity were higher for females (43.3 per cent) than for males (36.2 per cent). Whilst rates of overweight remained relatively stable as age increased, rates of obesity increased with age (from 28.4 per cent for those aged 18–24 years to 48.8 per cent of those aged 55 years and over). The trend was similar for males and females (table 8A.5.8).

After adjusting for differences in population age structures, the proportion of Aboriginal and Torres Strait Islander adults who were overweight or obese in 2012-13 was 1.2 times the proportion for non-Indigenous adults in 2011-12 (table 8A.5.2).

Data for rates of overweight and obesity by State and Territory and by remoteness area are available in tables 8A.5.2, 8A.5.4 and 8A.5.6. Data for all BMI categories by State and Territory are available in table 8A.5.6.

Children have lower rates of overweight and obesity than adults. In 2012-13, 29.7 per cent of Aboriginal and Torres Strait Islander children aged 2–14 years were categorised as overweight (19.6 per cent) and obese (10.2 per cent) (ABS 2014).

The BMI data for Aboriginal and Torres Strait Islander Australians collected in 2012–13 were calculated from *measured* height and weight, while data collected in 2004-05 were calculated from *reported* height and weight, which means that the two sets of data are not directly comparable.

Child nutrition

The NHMRC Australian dietary guidelines recommend eating a wide variety of nutritious food (vegetables, legumes, fruits, cereals, lean meat, fish, poultry, milks, yoghurts and cheeses (reduced fat varieties where possible)) and drinking plenty of water. The guidelines recommend limiting consumption of saturated fat, salt, alcohol and sugars.

Data reported for 2014-15 are based on the 2013 NHMRC daily food consumption guidelines (NHMRC 2013). For children and adolescents, the guidelines depend on age and sex, varying from 3.5 to 5.5 serves of vegetables and legumes/beans, and 1 to 2 serves of fruit.

In 2014-15, 69.8 per cent of Aboriginal and Torres Strait Islander children aged 2–14 years across all areas (remote and non-remote) met the guidelines for adequate daily fruit consumption, slightly lower than the rate for non-Indigenous children (74.1 per cent). The proportions meeting the guidelines for adequate daily vegetable intake were much lower — 7.4 per cent for Aboriginal and Torres Strait Islander children and 5.5 per cent for non-Indigenous children (table 8A.5.13).

From 2011–13 to 2014-15 the proportions of Aboriginal and Torres Strait Islander Australians aged 2–14 years meeting adequate daily fruit and vegetable intake did not change, whilst for non-Indigenous Australians there was a slight increase for fruit intake and vegetable intake did not change (tables 8A.5.13-14). Time series comparisons are only available from 2011–13 onwards due to changes to the guidelines for adequate fruit and vegetable intake.¹⁵ Data are also available for fruit and vegetable consumption for children aged 2–14 years by age group in table 8A.5.15 and by remoteness area in table 8A.5.16.

8.6 Oral health¹⁶

Box 8.6.1 Key measures

- Nationally in 2014-15, the rate of potentially preventable hospitalisations for dental conditions for Aboriginal and Torres Strait Islander children was 4.2 per 1000 population. After adjusting for differences in population age structures the rate is around 1.3 times the rate for non-Indigenous Australians (table 8A.6.10), reflecting an increase over the last 10 years for Aboriginal and Torres Strait Islander Australians (table 8A.6.11).
- Accurate data on dental health are relatively old (2010 for children and 2004–2006 for adults) and, particularly for children, may not be representative of current dental health outcomes. Supplementary data for Aboriginal and Torres Strait Islander children aged 0–14 years show that in 2014-15:
 - there were 28.4 per cent with reported teeth or gum problems (table 8A.6.4)
 - of those with reported problems, 71.4 per cent reported having a dental check-up within the previous year (table 8A.6.5), with cost the major reason the child didn't see the dentist in the last 12 months (27.9 per cent) (table 8A.6.6).

Box 8.6.2 Measures of oral health

There are two main measures for this indicator:

- *Child dental health* is defined as the proportion of children with no decayed, missing or filled teeth (dmft/DMFT) for children aged 5–10 years (infant teeth) and 6–15 years (permanent teeth)¹⁷. Data are sourced from the AIHW Child Dental Health Survey, with the most recent data for Aboriginal and Torres Strait Islander children for 2010 for Queensland, WA, SA, NT and Tasmania (age; remoteness)
- *Adult dental health* is defined as the number of decayed, missing and filled teeth (DMFT) for people aged 15 years and over. Data are sourced from the National Survey of Adult Oral Health, 2004–2006 (national).

Supplementary data for the main measures are reported from the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent data for 2014-15 for children aged 0–14 years and 2012-13 for people aged 15 years and over (data are based on self-report). Non-Indigenous comparator data are not available. A supplementary measure is reported on the hospitalisation rate for dental health conditions per 1000 population (national: remoteness; age).

Oral health is an important part of overall health and wellbeing. There is increasing evidence about the link between poor oral health and some chronic diseases such as diabetes and cardiovascular disease (Gwynne et al. 2016).

¹⁶ The Steering Committee notes its appreciation to the National Health Leadership Forum, which reviewed a draft of this section of the report.

¹⁷ DMFT/dmft: uppercase denote permanent (adult) teeth and lowercase deciduous (infant) teeth. DMFT/dmft is the sum of decayed, missing and filled teeth. Index is cumulative: once a tooth has decay, it is permanently recorded, and changes in risk factors or disease levels do not change.

Two of the most frequently occurring oral diseases are tooth decay (also known as dental decay or dental caries) and periodontal disease (Jamieson, Sayers and Roberts-Thomson 2010). Both are preventable and, with early treatment, curable (Williams et al. 2011).

- Tooth decay unless treated early, may result in pain, infection and destruction of soft tissue in the mouth. This may contribute to the development or exacerbation of other diseases. In addition, eating difficulty or pain may lead to modification of eating habits and subsequent nutritional problems. Dental health may affect speech and language development, and exacerbate other chronic diseases (Jamieson, Sayers and Roberts-Thomson 2010; NACOH 2004; Zander et al. 2013).
- Periodontal diseases of the tissues surrounding teeth are associated with bacterial infection of the periodontal tissues, and are specifically attributed to poor oral hygiene as opposed to diet. Periodontal diseases range in severity from gingivitis (a mild reversible form) to periodontitis (a severe destruction of the tissues) (Williams et al. 2011).

Accurate data on dental health for Aboriginal and Torres Strait Islander Australians are relatively incomplete and dated, however available data indicate that in Australia, dental conditions are highly prevalent in Aboriginal and Torres Strait Islander communities and generally among the socially disadvantaged (Lalloo et al. 2015). Older Aboriginal and Torres Strait Islander children generally have more dental decay than non-Indigenous children, and the decay is less likely to have been treated. Untreated tooth decay is also significantly more prevalent among Aboriginal and Torres Strait Islander adults than among non-Indigenous adults (AHMAC 2015). Historically, the traditional diets of Aboriginal and Torres Strait Islander Australians were associated with low levels of tooth decay. A marked rise in the consumption of food and drinks containing high levels of sugar and other refined carbohydrates over recent decades — particularly in remote communities and among children — has occurred at the same time as an increase in levels of tooth decay among Aboriginal and Torres Strait Islander Australians (Jamieson, Armfield and Roberts-Thomson 2007; NACOH 2004).

Factors influencing oral health include diet, dental hygiene and environmental factors, such as water fluoride levels and yearly dental check-ups (AHMAC 2015).

Preventative oral health behaviours such as tooth brushing and flossing are developed mainly through education and modelling by adults in the home environment and/or education outside the home (Jamieson, Armfield and Roberts-Thomson 2007). Among Aboriginal and Torres Strait Islander children, levels of preventative oral health behaviours are relatively low. A survey of children in Queensland between 2010 and 2012 found that more than one-third (35.3 per cent) of Aboriginal and Torres Strait Islander children did not start brushing with toothpaste until the age of 30 months or later, compared to 16.9 per cent of non-Indigenous children (Armfield et al. 2014).

Regular dental visits to manage issues and for routine check-ups are vital for good oral health, and can result in lower prevalence of dental decay (Australian Indigenous

HealthInfoNet 2016). In 2012-13, 13.9 per cent of Aboriginal and Torres Strait Islander people aged 2 years and over reported never having visited a dentist (table 8A.1.17), with cost the most commonly reported reason for not visiting a dentist in the last 12 months, followed by logistical reasons in remote areas and personal reasons in non-remote areas (table 8A.1.19). Additional data on dental consultations and oral health actions are reported in section 8.1 (Access to primary health care).

Dental health

For both child and adult dental health the main data sources containing the most accurate available data are relatively old and are reported in the attachment tables only (child dental health in tables 8A.6.1–8A.6.3 and adult dental health in table 8A.6.7).

Supplementary data on dental health are available from ABS survey data and are presented in this section. While more recent, these data are not as comprehensive as data from the main data sources, and rely on individuals self-reporting.

In 2014-15, for Aboriginal and Torres Strait Islander children aged 0–14 years:

- there were 28.4 per cent of children with reported teeth or gum problems (table 8A.6.4)
- of those with reported problems, 71.4 per cent had a dental check-up within the previous year (table 8A.6.5), with the cost the major reason the child didn't see the dentist in the last 12 months (27.9 per cent) (table 8A.6.6).

In 2012-13, 4.7 per cent of Aboriginal and Torres Strait Islander Australians aged 15 years and over reported complete natural tooth loss. The rate for complete tooth loss was highest for those aged over 55 years (23.6 per cent) and higher in non-remote areas (5.1 per cent) than in remote areas (3.3 per cent) (tables 8A.6.8 and 8A.6.9).

Potentially preventable hospitalisation for dental conditions

For this report, hospitalisations data are presented for the non-Indigenous population from 2012-13 onwards (for prior years the data are presented for 'other' which includes non-Indigenous Australians and those for whom Indigenous status is unknown or not stated). Prior to 2010-11, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Aboriginal and Torres Strait Islander identification in hospitalisation data. The attachment tables for this report include hospitalisations data for all jurisdictions for 2012-13 to 2014-15 for Aboriginal and Torres Strait Islander and non-Indigenous Australians, as well as data for the six jurisdictions for 2004-05 to 2014-15 for Aboriginal and Torres Strait Islander and other Australians.

In 2014-15, the rate of potentially preventable hospitalisations for dental conditions for Aboriginal and Torres Strait Islander Australians was 4.2 per 1000 population (table 8A.6.10), with the rate increasing as remoteness increased (table 8A.6.12). After

adjusting for differences in population age structures, Aboriginal and Torres Strait Islander Australians were hospitalised for dental conditions at 1.3 times the rate for non-Indigenous Australians (table 8A.6.10).

From 2004-05 to 2014-15, for NSW, Victoria, Queensland, WA, SA and the NT combined, the age-adjusted hospitalisation rate for dental health conditions for Aboriginal and Torres Strait Islander Australians increased by 54 per cent, while rates for other Australians remained relatively stable (table 8A.6.11).

In 2014-15, Aboriginal and Torres Strait Islander children aged 0–4 years and 5–9 years had higher rates of hospitalisation for dental health conditions than non-Indigenous children in the same age groups (8.0 and 5.0 per 1000 population and 12.2 and 9.9 per 1000 population, respectively), but older Aboriginal and Torres Strait Islander children aged 10–14 years had lower rates than non-Indigenous children (3.3 and 6.0 per 1000 population respectively) (table 8A.6.13).

Data are available for dental hospitalisation rates for children aged 0–14 years by remoteness by age in table 8A.6.15.

Future directions in data

National representative and timely data on oral health are not currently available. Until such data are available, information is collated from a range of sources. While supplementary data from the ABS is nationally representative it is limited in content on oral health and based on self-report.

Without data from larger sample surveys specifically targeting the Aboriginal and Torres Strait Islander population, collected on a consistent basis over time, there will continue to be a limited understanding on the oral health of Aboriginal and Torres Strait Islander Australians (Williams et al. 2011).

8.7 Mental health¹⁸

Box 8.7.1 Key messages

- In 2014-15, almost one-third of Aboriginal and Torres Strait Islander Australians aged 18 years and over (32.8 per cent) reported experiencing high/very high levels of psychological distress (table 8A.7.2). After adjusting for differences in population age structures this was 2.6 times the rate for non-Indigenous adults (table 8A.7.1).
- From 2004-05 to 2014-15, and adjusting for age, the proportion of Aboriginal and Torres Strait Islander adults experiencing high/very high levels of psychological distress increased by around 6 percentage points, while the proportion for non-Indigenous adults remained relatively constant, leading to a widening of the gap (figure 8.7.1).
- In 2014-15, the hospitalisation rate for mental and behavioural disorders for Aboriginal and Torres Strait Islander Australians was 2349 per 100 000 population. After adjusting for differences in population age structures, this was 1.8 times the rate for non-Indigenous Australians (table 8A.7.28).
- Over the period 2010–2014, for NSW, Queensland, WA, SA and the NT combined, after adjusting for differences in population age structures the rate of deaths for Aboriginal and Torres Strait Islander Australians due to mental and behavioural disorders was 1.4 times the rate for non-Indigenous Australians (table 8A.7.36).

Box 8.7.2 Measures of mental health

There is one main measures for this indicator:

- *Psychological distress*¹⁹ is defined as the proportion of people aged 18 years and over experiencing high/very high levels of psychological distress (all jurisdictions; national data by remoteness, age and stressors).

Data for the main measure are available from the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent available data for 2014-15. Data for the non-Indigenous population are sourced from the ABS Australian Health Survey (AHS)/National Health Survey (NHS), with the most recent data for the 2014-15 from the NHS.

There are three supplementary measures for this indicator:

- *Treatment rates* is defined as the rate of patients treated for mental health by emergency departments (national), community and residential mental health care (all jurisdictions), and general practitioners (national).

(continued next page)

¹⁸ The Steering Committee notes its appreciation to the National Health Leadership Forum, which reviewed a draft of this section of the report.

¹⁹ Based on Kessler Psychological Distress Scale-10 (K10) modified to five questions (K5) which measure an individual's level of psychological distress in the past four weeks.

Box 8.7.2 (continued)

- *Hospitalisation rates* is defined as the rate of hospitalisations for mental and behavioural disorders per 100 000 population (all jurisdictions: sex, remoteness).
- *Deaths from potentially avoidable mental and behavioural disorders* is defined as the rate of deaths from mental and behavioural disorders per 100 000 population (NSW, Queensland, WA, SA and the NT: age, sex).

Mental health is essential to the overall health and wellbeing of individuals, and is closely related to the COAG targets for improved health outcomes. Mental health can also affect outcomes in other areas, such as education and training (chapter 7) economic participation (chapter 9), and safe and supportive communities (chapter 11).

Mental health relates to the ability to negotiate the daily challenges and social interactions of life, without experiencing undue emotional or behavioural incapacity (DoHA 2010). Mental health includes both mental illness and overall mental wellbeing. Although mental wellbeing problems are distinct from mental illness, the two interact and influence each other.

- Mental *illness* describes a range of behavioural and psychological conditions that can affect an individual's mental health functioning and quality of life. The most common mental illnesses are anxiety, affective (mood), and substance use disorders. Mental illness also includes low prevalence conditions such as schizophrenia, bipolar disorder and other psychoses, and severe personality disorder (DoHA 2010). While of lower prevalence, these conditions can severely affect people's ability to function in their daily lives (Morgan et al. 2011).
- Mental *wellbeing* can be affected by a broad range of factors, including domestic violence (see section 4.12), alcohol and substance misuse (see sections 11.1 and 11.2), physical health problems, incarceration (see section 4.13), family breakdown and social disadvantage (AHMAC 2004; Dudgeon, Milroy and Walker 2014).

Many of the unique risk factors faced by Aboriginal and Torres Strait Islander Australians have persisted across generations, most particularly the ongoing effects of colonisation (Dudgeon, Milroy and Walker 2014). Socio-historical-political factors influence the mental health of Aboriginal and Torres Strait Islander people, through the impact of family separation, the taking away of land, social inequity, racism, and the loss of culture and identity (Vicary and Westerman 2004). (See the historical narrative on Australia's first peoples in chapter 1.)

Racism can be a key source of stress and socioeconomic disadvantage faced by Aboriginal people and families, with negative effects on social and emotional wellbeing (Dudgeon, Milroy and Walker 2014). Research in the NT found a significant association between interpersonal racism and depression among Aboriginal and Torres Strait Islander Australians (AHMAC 2012). (See section 5.1 on valuing Indigenous Australians and their cultures.)

A range of factors can have a positive influence on the mental wellbeing of Aboriginal and Torres Strait Islander people including paid employment, participation in education, community engagement and access to social networks, affordable and secure housing, and culturally appropriate services. A WA study showed that higher socioeconomic status was associated with a reduced risk of mental health problems in Aboriginal children (Dudgeon, Milroy and Walker 2014). However, people with a mental health condition may have barriers to these positive influences due to their condition (ABS 2016).

Psychological distress

In 2014-15, almost one-third of Aboriginal and Torres Strait Islander Australians aged 18 years and over (32.8 per cent) reported experiencing high/very high levels of psychological distress (table 8A.7.2), with rates higher for females (38.4 per cent) than males (26.7 per cent) (table 8A.7.16).

In 2014-15, the most commonly reported stressors²⁰ for Aboriginal and Torres Strait Islander adults with high/very high psychological distress (and for males and females and all remoteness areas) were 'death of a close family member or close friend' (46.7 per cent) and 'not able to get a job' (42.5 per cent) (table 8A.7.16). Comparing stressors across remoteness areas, 'mental illness' had the largest rate difference with 35.9 per cent in non-remote areas and 17.0 per cent in remote areas (table 8A.7.17).

After adjusting for differences in population age structures, the rate of Aboriginal and Torres Strait Islander adults experiencing high/very high levels of psychological distress was 2.6 times the rate for non-Indigenous adults. For both groups there was no significant difference in rates across remoteness areas in 2014-15 (for Aboriginal and Torres Strait Islander adults, the rate in remote areas increased from 2012-13 to 2014-15 making it now similar to the rate in major cities and regional areas) (table 8A.7.1).

Between 2004-05 and 2014-15, after adjusting for differences in population age structures, the proportion of Aboriginal and Torres Strait Islander adults experiencing high/very high levels of psychological distress increased by around six percentage points. The proportion for non-Indigenous adults remained relatively constant, resulting in a widening of the gap over the same period (figure 8.7.1).

The attachment tables include supplementary data about selected attributes of psychological distress (nervous, without hope, restless, jumpy, that everything was an effort and sadness) by age, sex and remoteness (table 8A.7.19–27).

²⁰ Data on reported stressors for psychological distress are reported differently to data in the 2014 OID report to provide more meaningful understanding of the contributors to high/very high psychological distress.

Figure 8.7.1 **Proportion of people aged 18 years and over with high/very high levels of psychological distress, 2004-05, 2008, 2011-13 and 2014-15^{a, b}**

a Error bars represent 95 per cent confidence intervals around each estimate. **b** Data are age standardised.

Sources: ABS (unpublished) National Aboriginal Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal Torres Strait Islander Social Survey (NATSISS) 2008; ABS (unpublished) National Health Survey (NHS) 2007-08; ABS (unpublished) Australian Aboriginal Torres Strait Islander Health Survey 2012-13 (core component); ABS (unpublished) Australian Health Survey 2011-13 (2011-12 core component); ABS (unpublished) NATSISS, 2014-15; ABS (unpublished) NHS, 2014-15; table 8A.7.1.

Treatment rates²¹

In 2013-14, after adjusting for differences in population age structures, Aboriginal and Torres Strait Islander and non-Indigenous Australians recorded similar rates of contact with GPs for mental health problems (606 and 648 encounters per 1000 population respectively, table 8A.7.33), but Aboriginal and Torres Strait Islander Australians rate of contact with community based mental health services²² (1066 per 1000 population) was more than three times the rate for non-Indigenous Australians (table 8A.7.35). Data on residential mental health care and mental health related emergency departments' occasions of service in public hospitals are available in tables 8A.7.33-34.

²¹ Treatment rate data are reported for a selection of mental health services by 'occasions of service'. A patient may be counted more than once if they received multiple occasions of service.

²² Community based mental health service contacts refers to specialised public mental health services dedicated to the assessment, treatment, rehabilitation and care of non-admitted clients.

Hospitalisation rates

For this report, hospitalisations data are presented for the non-Indigenous population from 2012-13 onwards (for prior years the data are presented for 'other' which includes non-Indigenous Australians and those for whom Indigenous status is unknown or not stated). Prior to 2010-11, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Aboriginal and Torres Strait Islander Indigenous identification in hospitalisation data. The attachment tables for this report include hospitalisations data for all jurisdictions for 2012-13 to 2014-15 for Aboriginal and Torres Strait Islander and non-Indigenous Australians, as well as data for the six jurisdictions for 2004-05 to 2014-15 for Aboriginal and Torres Strait Islander and other Australians.

Nationally in 2014-15, the crude rate of hospitalisation for mental and behavioural disorders for Aboriginal and Torres Strait Islander Australians was 2348.6 per 100 000 population (table 8A.7.28). The most common principal diagnoses were substance use disorders (933.4 per 100 000 population) and mood and neurotic disorders (689.3 per 100 000 population) (table 8A.7.31).

After adjusting for differences in population age structures, the Aboriginal and Torres Strait Islander hospitalisation rate for mental and behavioural disorders was 1.8 times the rate for non-Indigenous Australians (table 8A.7.28). For both Aboriginal and Torres Strait Islander and non-Indigenous Australians, the hospitalisation rate was higher in major cities compared to regional and remote areas (table 8A.7.30).

For NSW, Victoria, Queensland, WA, SA and the NT combined, between 2004-05 and 2014-15:

- the crude rate for Aboriginal and Torres Strait Islander Australians increased from 1941.5 to 2364.2 per 100 000 population (table 8A.7.32)
- when adjusted for differences in population age structures, the rate for Aboriginal and Torres Strait Islander Australians increased from 1.5 to 1.8 times the rate for other Australians (tables 8A.7.29).

Mental and behavioural disorders as cause of death

Mortality data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Indigenous identification and numbers of deaths to support analysis.

Over the period 2010–2014, there were 324 deaths due to mental and behavioural disorders for Aboriginal and Torres Strait Islander Australians, equating to a rate of 10.7 deaths per 100 000 population, with rates slightly higher for females compared with males (table 8A.7.38). After adjusting for differences in population age structures, the rate for Aboriginal and Torres Strait Islander Australians was 1.4 times the rate for non-Indigenous

Australians (table 8A.7.37). The majority of deaths for both Aboriginal and Torres Strait Islander and non-Indigenous Australians were for people aged 45 years and over — 91 per cent and 99 per cent respectively (table 8A.7.38).

Data on death rates due to mental and behavioural disorders are available by State and Territory by sex in tables 8A.7.36 and 8A.7.38.

Things that work

Research by Dudgeon et al (2014) for the Closing the Gap Clearinghouse identified the following as important features of programs that showed promising results in improving mental health outcomes for Aboriginal and Torres Strait Islander Australians:

- a holistic approach
- a focus on recovery and healing from stress and trauma
- a means of empowering people to regain a sense of control over their lives
- strategies that are Aboriginal and Torres Strait Islander led, family focused, culturally responsive and context specific, including partnerships with the Aboriginal Community Controlled Health Services sector and local communities
- incorporate interdisciplinary approaches that provide outreach services and transport (Dudgeon et al. 2014).

Research findings also increasingly suggest that early intervention can prevent the worsening of mental health problems. Early intervention and prevention strategies are appropriate for helping young people, as adolescence is the peak age of onset for a first episode of mental illness (Chalmers et al. 2014).

8.8 Suicide and self-harm²³

Box 8.8.1 Key messages

- Suicide and self-harm cause great grief in both Aboriginal and Torres Strait Islander communities and non-Indigenous communities.
- For the period 2010–2014, after adjusting for differences in population age structures, the rate of deaths from suicide for Aboriginal and Torres Strait Islander Australians was twice the rate for non-Indigenous Australians (table 8A.8.1).
- The rate of deaths from suicide was higher for males than for females for both Aboriginal and Torres Strait Islander Australians (2.8 times as high) and non-Indigenous Australians (3.2 times as high) (table 8A.8.1).
- For NSW, Queensland, WA, SA and the NT combined, age-specific rates of deaths from suicide were highest for Aboriginal and Torres Strait Islander people aged 25–34 years (41.2 deaths per 100 000 population), around three times the rate for non-Indigenous Australians of the same age. There was no difference in rates between Aboriginal and Torres Strait Islander and non-Indigenous people aged 45 years and over (figure 8.8.1).
- From 2004-05 to 2014-15, after adjusting for differences in population age structures, the hospitalisation rate for intentional self-harm increased for Aboriginal and Torres Strait Islander Australians by 55.9 per cent, while the rate for other Australians remained relatively stable, resulting in the rate for Aboriginal and Torres Strait Islander Australians increasing from 1.7 to 2.6 times the rate for other Australians (figure 8.8.2).

Box 8.8.2 Measures of suicide and self-harm

There is one main measure for this indicator. Suicide deaths is defined as the number of deaths from intentional self-harm per 100 000 population (NSW, Queensland, WA, SA and NT; age; sex). Data for this measure are sourced from the ABS Causes of Death collection, with the most recent available data for 2014. Due to small numbers, the rate is calculated by averaging the number of deaths over a five year period.

Data are also provided for one supplementary measure, the number of non-fatal hospitalisations from intentional self-harm per 100 000 population (all jurisdictions; sex; remoteness).

Suicide and self-harm cause great grief in both Aboriginal and Torres Strait Islander and non-Indigenous communities (Senate Community Affairs References Committee 2010). However, Aboriginal and Torres Strait Islander Australians experience disproportionately high rates of suicide, and it has become increasingly prevalent over recent decades, accelerating after the 1980s (DOHA 2013). Suicide is most prevalent among young Aboriginal and Torres Strait Islander males, while suicide attempts seem to be more

²³ The Steering Committee notes its appreciation to the National Health Leadership Forum, which reviewed a draft of this section of the report.

prevalent for Aboriginal and Torres Strait Islander females (AHA 2014; Clifford, Doran and Tsey 2013; Elliott-Farrelly 2004). The causes appear to be a complex mix of life events, social and geographical isolation, cultural and family background and supports, socioeconomic disadvantage, genetic makeup, mental and physical health, coping skills and resilience (Australian Government 2013). Section 8.7 reports on mental health in more detail.

Environmental risk factors that contribute to high levels of suicide in Aboriginal and Torres Strait Islander Australians include: lower levels of education, employment, service access, health and income; and increased levels of remoteness, domestic violence or abuse, alcohol and other drug abuse (DOHA 2008). Trauma and grief as a result of past dislocation and mistreatment, and a loss of cultural identity, and lack of access to culturally appropriate services can also contribute to higher levels of suicide (DOHA 2008).

Studies have found that suicides among Aboriginal and Torres Strait Islander Australians appear to occur in clusters, and that victims may share common age groups, genders and methods. There have been significant peaks and clusters of suicides in some regions, particularly those with significant remote populations (DOHA 2013; Elliott-Farrelly 2004). Aboriginal and Torres Strait Islander Australians have been more exposed to suicide than most non-Indigenous Australians, which can lead to situations of ‘bereavement overload’ and may contribute to suicidal behaviours (AHA 2014).

The continued exposure of Aboriginal and Torres Strait Islander Australians to multiple risk factors has led to calls for increased suicide prevention interventions (Clifford, Doran and Tsey 2013). Broadly protective factors against suicide include connectedness with family, friends, culture, school and communities; having someone who cares about you and having someone you care about; having positive attitudes and ways to tackle problems; financial stability, good health and access to mental health support when required (NMHC 2012).

Suicide deaths

Mortality data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Aboriginal and Torres Strait Islander identification and numbers of deaths to support analysis.

For the period 2010–2014, after adjusting for differences in population age structures, the rate of deaths for Aboriginal and Torres Strait Islander Australians due to suicide was twice the rate for non-Indigenous Australians (table 8A.8.1).

The rate of deaths from suicide was higher for males than for females for both Aboriginal and Torres Strait Islander Australians (2.8 times as high) and non-Indigenous Australians (3.2 times as high) (table 8A.8.1).

Figure 8.8.1 Rates of deaths from intentional self-harm (suicide) by age, NSW, Queensland, WA, SA and the NT, 2010–2014^a

^a Deaths from intentional self-harm are defined as causes of death with ICD-10 codes X60–X84, Y87.0.

Source: ABS (unpublished) Causes of Death collection; table 8A.8.2.

Suicide rates vary by age group. For the period 2010–2014 for NSW, Queensland, WA, SA and the NT combined (and individually with the exception of SA), the suicide rate was highest for Aboriginal and Torres Strait Islander Australians aged 25–34 years (41.2 per 100 000 population), over three times the rate for non-Indigenous Australians of the same age (figure 8.8.1). Data on suicide death rates by State and Territory by sex are available in table 8A.8.1.

Hospitalisations for self-harm

For this report, hospitalisations data are presented for the non-Indigenous population from 2012–13 onwards (for prior years the data are presented for ‘other’ which includes non-Indigenous Australians and those for whom Indigenous status is unknown or not stated). Prior to 2010–11, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have adequate identification of Aboriginal and Torres Strait Islander Australians in hospitalisation data. The attachment tables for this report include hospitalisations data for all jurisdictions for 2012–13 to 2014–15 for Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians, as well as data for the six jurisdictions for 2004–05 to 2014–15 for Aboriginal and Torres Strait Islander Australians and other Australians.

Nationally in 2014-15, after adjusting for differences in population age structures, the rate of hospitalisation for intentional self-harm for Aboriginal and Torres Strait Islander Australians was around two-and-a-half times the rate for non-Indigenous Australians (table 8A.8.3).

In 2014-15, for Aboriginal and Torres Strait Islander Australians, the rate was:

- higher for females than males. There was a similar pattern for non-Indigenous Australians (table 8A.8.3)
- higher in major cities and remote areas (remote and very remote combined) than regional areas. Rates for non-Indigenous Australians were higher in regional areas, than remote areas and major cities (table 8A.8.5).

Figure 8.8.2 Rates of hospitalisation for intentional self-harm, NSW, Victoria, Queensland, WA, SA and public hospitals in the NT, 2004-05 to 2014-15^{a, b}

^a Other includes hospitalisations where Indigenous status was recorded as non-Indigenous or not stated.

^b Rates are age standardised.

Source: AIHW (unpublished) National Hospital Morbidity Database; table 8A.8.4

Comparable time series data from 2004-05 to 2014-15 are available for NSW, Victoria, Queensland, WA, SA and the NT. After adjusting for differences in population age structures, the hospitalisation rate for intentional self-harm increased for Aboriginal and Torres Strait Islander Australians by 55.9 per cent, while the rate for other Australians remained relatively stable, resulting in the rate for Aboriginal and Torres Strait Islander Australians increasing from 1.7 to 2.6 times the rate for non-Indigenous Australians (figure 8.8.2).

Things that work

A systematic review by Clifford, Doran and Tsey (2013) of suicide prevention interventions targeting indigenous peoples in Australia, the United States, Canada and New Zealand identified nine evaluations (three in Australia that were peer-reviewed), with only three of these measuring changes in rates of suicide or suicidal behaviour, and significant methodological variability. The study concluded an urgent need for more rigorous evaluations, noting that combining and tailoring best evidence and culturally-specific individual strategies into one coherent suicide prevention program for delivery to whole Indigenous communities and/or population groups at high risk of suicide offers considerable promise. A more recent review by Ridani et al. (2015) expanded the review of Indigenous interventions to incorporate gray literature (i.e, information not peer-reviewed) and confirmed the need to evaluate outcomes if prevention is to be progressed, adding that results suggest that employing a whole of community approach and focusing on connectedness, belongingness and cultural heritage may be of benefit.

One initiative that may have contributed to a reduction in suicide and self-harm is described in box 8.8.3.

Box 8.8.3 Things that work

The **Yiriman Project** (WA), auspiced by the Kimberly Aboriginal Law and Culture Centre, commenced in 2000. The Project takes young people, accompanied by elders, on trips back to country, to immerse them in the stories, song and knowledge that are their cultural heritage. This builds young people's confidence and improves their self-worth, and is considered to have helped curb suicide, self-harm and substance abuse in the participating communities (RA 2013).

The Yiriman project was the winner of Reconciliation Australia's 2012 Indigenous Governance Awards in Category B: non-incorporated projects and initiatives. Project outcomes were summarised in Taylor's (2010) qualitative study:

- the healing of young people as they walk on country and look after it
- the opportunity to develop and assert culture, language and bush skills
- meaningful employment that values and maintains culture.

Source: Reconciliation Australia (2013) *Sharing Success: Stories from the 2012 Indigenous Governance Awards*, Reconciliation Australia, Canberra; Taylor (2010), *Partnerships in the Youth Sector - Building Stories in Our Young People: The Yiriman Project*, The Foundation for Young Australians, Melbourne.

In 2014, the Australian Government funded the School of Indigenous Studies, University of Western Australia, in partnership with the Telethon Kids Institute and the Healing Foundation, to undertake the national *Aboriginal and Torres Strait Islander Suicide Prevention Evaluation Project*. The project will evaluate the effectiveness of existing suicide prevention services and programs and contribute to a much needed evidence base for what works in Aboriginal and Torres Strait Islander suicide prevention. A report was due to be provided to the Minister for Indigenous Affairs in mid-2016, which will include

recommendations for improving services and programs and delivery models (Australian Indigenous Health Info Net 2014; University of Western Australia 2014).

Chapter 8 Healthy lives — attachment

The tables in this file accompany the report, *Overcoming Indigenous Disadvantage: Key Indicators 2016*, prepared by the Productivity Commission for the Steering Committee for the Review of Government Service Provision. Background and definitions are available in the report, which is available on the Review website (www.pc.gov.au/oid2016).

This file is available in both Microsoft Excel and Adobe PDF formats on the Review website (www.pc.gov.au/oid2016).

Attachment contents

8A.1 Access to primary health care

Self-assessed health status

Table 8A.1.1	Self-assessed health status, by age and Indigenous status, 2004-05, 2008, 2011-13 and 2014-15
Table 8A.1.2	Self-assessed health status, Aboriginal and Torres Strait Islander people aged 15 years and over, by sex, 2004-05, 2008, 2012-13 and 2014-15 (crude rates)
Table 8A.1.3	Age standardised self-assessed health status, people aged 15 years and over, by sex and Indigenous status, 2004-05, 2008, 2011-13 and 2014-15
Table 8A.1.4	Self-assessed health status, Aboriginal and Torres Strait Islander people aged 15 years and over, by State and Territory, 2002, 2004-05, 2008, 2012-13 and 2014-15 (crude rate)
Table 8A.1.5	Self-assessed health status, Aboriginal and Torres Strait Islander people aged 15 years and over, by State and Territory, 2002, 2004-05, 2008, 2012-13 and 2014-15 (relative standard error of crude rate)
Table 8A.1.6	Self-assessed health status, Aboriginal and Torres Strait Islander people aged 15 years and over, by State and Territory, 2002, 2004-05, 2008, 2012-13 and 2014-15 (95 per cent confidence interval of crude rate)
Table 8A.1.7	Age standardised self-assessed health status, people aged 15 years and over by State and Territory and Indigenous status, 2004-05, 2008, 2011-13 and 2014-15 (proportion)
Table 8A.1.8	Age standardised self-assessed health status, people aged 15 years and over by State and Territory and Indigenous status, 2004-05, 2008, 2011-13 and 2014-15 (relative standard error)
Table 8A.1.9	Age standardised self-assessed health status, people aged 15 years and over by State and Territory and Indigenous status, 2004-05, 2008, 2011-13 and 2014-15 (95 per cent confidence interval)
Table 8A.1.10	Self-assessed health status, Aboriginal and Torres Strait Islander people aged 15 years and over, by remoteness, 2004-05, 2008, 2012-13 and 2014-15 (crude rate)
Table 8A.1.11	Age standardised self-assessed health status, by selected population characteristics, people aged 15 years and over, 2004-05, 2008, 2011-13 and 2014-15
Table 8A.1.12	Self-assessed health status, Aboriginal and Torres Strait Islander children aged 0–14 years, by sex, 2008 and 2014-15
Table 8A.1.13	Self-assessed health status, Aboriginal and Torres Strait Islander children aged 0–14 years, by remoteness, 2008 and 2014-15

Use of primary health care

Table 8A.1.14	Time since last consulted GP/specialist, people aged 18 years and over, age standardised, by remoteness, 2001, 2004-05, 2011-13 (proportion)
Table 8A.1.15	Time since last consulted GP/specialist, people aged 18 years and over, age standardised, by remoteness, 2001, 2004-05, 2011-13 (relative standard error and 95 per cent confidence interval)
Table 8A.1.16	Reasons for not going to a GP in the last 12 months when they had a health problem, Aboriginal and Torres Strait Islander Australians aged 18 years and over, by remoteness, 2004-05, 2012-13
Table 8A.1.17	Time since last consulted dentist, people aged two years and over, age standardised, by remoteness, 2001, 2004-05, 2011-13 (proportion)

Attachment contents

Table 8A.1.18	Time since last consulted dentist, people aged two years and over, age standardised, by remoteness, 2001, 2004-05, 2011-13 (relative standard error and 95 per cent confidence interval)
Table 8A.1.19	Reasons for not going to a dentist in the last 12 months when there was a dental problem, Aboriginal and Torres Strait Islander Australians aged 18 years and over, by remoteness, 2004-05, 2012-13
Other	
Table 8A.1.20	Health care services Aboriginal and Torres Strait Islander Australians sought when they had a health problem, by remoteness, 2012-13
Table 8A.1.21	Reasons for not going to other health professionals in the last 12 months, Aboriginal and Torres Strait Islander Australians aged 18 years and over, by remoteness, 2004-05, 2012-13
Table 8A.1.22	Health services usually used by Aboriginal and Torres Strait Islander children aged 0–14 years, by State and Territory, 2008 and 2014-15
Table 8A.1.23	Health services usually used by Aboriginal and Torres Strait Islander children aged 0–14 years, by remoteness, 2008 and 2014-15
Table 8A.1.24	Aboriginal and Torres Strait Islander children aged 0–14 years, whether usually seeks health care by self-assessed health status, 2008 and 2014-15
Table 8A.1.25	Vaccination coverage estimates for children as at 31 December 2015
Table 8A.1.26	Vaccination coverage estimates for children as at 31 December 2013
Table 8A.1.27	Vaccination coverage estimates for children as at 31 December 2011
Table 8A.1.28	Vaccination coverage estimates for children as at 31 December 2009
Table 8A.1.29	Vaccination coverage estimates for children, NSW, Victoria, WA, SA and the NT combined, 31 December 2007
Table 8A.1.30	Vaccination coverage estimates for children, at age 1 years, 2 years, 5 years in NSW, Vic, WA, SA and NT combined, by Indigenous status 2001-2015
Table 8A.1.31	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 1 year of age, as at 31 December 2015
Table 8A.1.32	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 1 year of age, as at 31 December 2013
Table 8A.1.33	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 1 year of age, as at 31 December 2011
Table 8A.1.34	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 1 year of age, 31 December 2009
Table 8A.1.35	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 1 year of age, 31 December 2007
Table 8A.1.36	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 2 years of age, as at 31 December 2015
Table 8A.1.37	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 2 years of age, as at 31 December 2013
Table 8A.1.38	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 2 years of age, as at 31 December 2011
Table 8A.1.39	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 2 years of age, as at 31 December 2009
Table 8A.1.40	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 2 years of age, NSW, Victoria, WA, SA and the NT, 31 December 2007

Attachment contents

Table 8A.1.41	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 5 years of age, as at 31 December 2015
Table 8A.1.42	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 5 years of age, as at 31 December 2013
Table 8A.1.43	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 5 years of age, as at 31 December 2011
Table 8A.1.44	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 5 year of age, as at 31 December 2009
Table 8A.1.45	Vaccination coverage estimates for selected diseases for children 'fully vaccinated' at 6 years of age, NSW, Victoria, WA, SA and the NT, 31 December 2007
Table 8A.1.46	Immunisation rates for Aboriginal and Torres Strait Islander Australians aged 50 years and over, 2012-13
Table 8A.1.47	Total expenditure on health services for Aboriginal and Torres Strait Islander and non-Indigenous people, by type of health good or service, 2010-11
Table 8A.1.48	Expenditure per person on primary and secondary/tertiary health services for Aboriginal and Torres Strait Islander and Non-Indigenous people, by type of health good or service, 2010-11
Table 8A.1.49	Employment in selected health-related occupations, Indigenous people aged 15 years and over, 2011

Table 8A.1.1 Self-assessed health status, by age and Indigenous status, 2004-05, 2008, 2011-13 and 2014-15 (a), (b), (c)

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Data for Aboriginal and Torres Strait Islander children aged 0-14 years, and for some young people aged 15-17 years, were obtained from an adult proxy. For the majority of Aboriginal and Torres Strait Islander and non-Aboriginal and Torres Strait Islander people aged 15 years and over, responses were self-reported.

(c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) The rate ratio is calculated by dividing the rate for Aboriginal and Torres Strait Islander people by the corresponding rate for non-Indigenous people.

(a) Information for some young people aged 15–17 years was provided by an adult proxy. For the majority of people aged 15 years and over, data were self-reported.

(b) Age standardised proportions have been age standardised using the 2001 Australian population to account for differences in the age structure of the population.

(c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) The rate ratio is calculated by dividing the rate for Aboriginal and Torres Strait Islander people by the corresponding rate for non-Indigenous people.

(a) Information for some young people aged 15–17 years was provided by an adult proxy. For the majority of people aged 15 years and over, data were self-reported.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Age standardised proportions have been age standardised using the 2001 Australian population to account for differences in the age structure of the population.

- (b) Information for some young people aged 15–17 years was provided by an adult proxy. For the majority of people aged 15 years and over, data were self-reported.
- (c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (d) Age standardised proportions have been age standardised using the 2001 Australian population to account for differences in the age structure of the population.
- (e) The rate ratio is calculated by dividing the rate for Aboriginal and Torres Strait Islander people by the corresponding rate for non-Indigenous people.
- (f) People aged 18 years and over.
- (g) Includes people not at school.
- (h) Includes people who never attended school.
- (i) Very remote areas of Australia were out of the scope of the 2004-05 and 2007-08 National Health Surveys therefore non-Indigenous data for remote areas are unavailable.

(a) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(b) Includes 'remote' and 'very remote' categories of the ASGS.

(c) Includes 'major city', 'inner regional' and 'outer regional' categories of the ASGS.

(d) Non-Indigenous data from the 2011-13 AHS (2011-12 NHS component) is not available.

(e) Includes 'time since last consultation' not known.

na Not available.

Total (g)	16.6	100.0	—	—	62.3	100.0	—	—	78.9	100.0	—	—

(a) Estimates with a relative standard error (RSE) of between 25 and 50 per cent and should be used with caution. A 95 per cent confidence interval (CI) are reported against each estimate.

(b) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(c) Includes 'remote' and 'very remote' categories of the ASGS.

Table 8A.1.19 Reasons for not going to a dentist in the last 12 months when there was a dental problem, Aboriginal and Torres Strait Islander Australians aged 18 years and over, by remoteness, 2004-05, 2012-13 (a), (b)

(d) Includes 'major cities', inner regional' and 'outer regional' categories of the ASGS.

(e) Includes: too busy (work, personal or family responsibilities), discrimination, service not culturally appropriate, language problems, dislikes service or health professional, afraid, embarrassed, does not trust the hospital, or felt service would be inadequate.

(f) Includes transport/distance, service not available in area, waiting time too long, or service not available at the time required.

(g) Components may not add to total as people may have reported more than one reason for not going to a dentist.

– Nil or rounded to zero.

Does not usually seek health care	%	41.3	66.3	73.3	31.8	np	np	35.0	28.0

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use.

(b) Information collected about types of health services used for child were collected from an adult proxy on behalf of the child.

(c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) Including casualty, outpatients or emergency area.

(e) Outside Aboriginal Medical Service, health clinic or hospital.

(f) Includes a maternal and child health centre, Traditional healer, Chemist, a relative or other community person and other health professional (e.g. naturopath, dietitian).

2010-11			
Total for potentially preventable chronic conditions	3 210.4	1 075.8	3.0

(a) Categories are based on ICD-10-AM codes used for identifying potentially preventable hospitalisations. See table 8A.2.13 for the ICD-10-AM codes used to classify potentially preventable conditions. Note that these specifications have changed since the last report and data are not comparable with that previously published.

(b) Directly age-standardised using the Australian 2001 standard population.

(c) Non-Indigenous includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

Table 8A.2.1 **Potentially preventable hospitalisations for chronic conditions, by Indigenous status, 2010-11 to 2014-15 (age standardised rate per 100 000 population) (a), (b)**

	<i>Aboriginal and Torres Strait Islander</i>	<i>Non-Indigenous (c)</i>	<i>Rate ratio (d)</i>
--	--	---------------------------	-----------------------

(d) Rate ratio is the age standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by non-Indigenous hospitalisation rate.

Non-Indigenous total for potentially preventable chronic conditions	1 004.8	1 226.9	1 281.3
2010-11			
Aboriginal and Torres Strait Islander total for potentially preventable chronic conditions	1 998.5	3 169.7	4 992.8
Non-Indigenous total for potentially preventable chronic conditions	1 007.4	1 208.2	1 330.7

- (a) Categories are based on ICD-10-AM codes used for identifying potentially preventable hospitalisations. See table 8A.2.13 for the ICD-10-AM codes used to classify potentially preventable conditions. Note that these specifications have changed since the last report and data are not comparable with that previously published.
- (b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) from 2012-13 onward and the Australian Standard Geographical Classification (ASGC) prior to 2012-13, and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.
- (c) Rates per 100 000 population are calculated using ABS Estimated Resident Population by remoteness classification from the 2011 Census. Rates were directly age standardised to the 2001 Australian population.
- (d) Non-Indigenous includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.
- (e) Rate ratio is the age standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). See table 8A.2.13 for the ICD-10-AM codes used to classify potentially preventable conditions. Note that these specifications have changed since the last report and data are not comparable with that previously published.

(b) Directly age-standardised using the Australian 2001 standard population.

Table 8A.2.9 Hospitalisations for infections with a predominantly sexual mode of transmission, by Indigenous status, 2010-11 to 2014-15 (age standardised rate per 100 000 population) (a), (b)

	<i>Aboriginal and Torres Strait Islander</i>	<i>Non-Indigenous</i>	<i>Rate ratio (c)</i>
--	--	-----------------------	-----------------------

(c) Rate ratio is the age standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by non-Indigenous hospitalisation rate.

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). See table 8A.2.13 for the ICD-10-AM codes used to classify potentially preventable conditions. Note that these specifications have changed since the last report and data are not comparable with that previously published.

(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) from 2012-13 onward and the Australian Standard Geographical Classification (ASGC) prior to 2012-13, and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(c) Rates per 100 000 population are calculated using ABS Estimated Resident Population by remoteness classification from the 2011 Census. Rates were directly age standardised to the 2001 Australian population.

(d) 'Non-Indigenous' includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

(e) Rate ratio is the age standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

(a) External causes (ICD-10-AM codes V00–Y98) are based on the first external cause reported where the principal diagnosis was 'injury, poisoning and certain other consequences of external causes' (ICD-10-AM codes S00–T98). Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Episodes of care for non-admitted patients treated in hospital in emergency department or outpatient clinics are not included in the hospitalisations count.

(b) Directly age-standardised using the Australian 2001 standard population.

(c) Rate ratio is the age standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the non-Indigenous hospitalisation rate.

(d) Includes separations where no external cause was reported.

Table 8A.2.13 **List of ICD-10-AM codes used to define categories of potentially preventable hospitalisations (a)**

<i>Category</i>	<i>Condition</i>	<i>ICD-10-AM codes</i>	<i>Notes</i>
Vaccine preventable			
	Pneumonia and influenza (vaccine-preventable)	J10, J11, J13, J14	In any diagnosis. Exclude people under 2 months.
	Other vaccine-preventable conditions	A08.0, A35, A36, A37, A80, B01, B05, B06, B16.1, B16.9, B18.0, B18.1, B26, G00.0	In any diagnosis
Chronic			
	Asthma	J45, J46	As principal diagnosis. Exclude children aged less than 4 years
	Congestive cardiac failure	I50, I11.1, J81	As principal diagnosis. Exclude cases with cardiac procedure codes as noted below.
	Diabetes complications	E10, E11, E13, E14	As principal diagnosis
	COPD	J20, J41-J44	As principal diagnosis. Include J20 only if with additional diagnoses of J41-J44.
	Bronchiectasis	J47, J20	As principal diagnosis. Include J20 only if with additional diagnosis of J47.
	Angina	I20, I24.0, I24.8, I24.9	As principal diagnosis. Exclude cases with cardiac procedure codes as noted below.
	Iron deficiency anaemia	D50.1, D50.8, D50.9	As principal diagnosis
	Hypertension	I10, I11.9	As principal diagnosis. Exclude cases with cardiac procedure codes as noted below.
	Nutritional deficiencies	E40-E43, E55.0, E64.3	As principal diagnosis
	Rheumatic heart diseases	I00-I02, I05-I09	As principal diagnosis
Acute			
	Pneumonia (not vaccine-preventable)	J15.3, J15.4, J15.7, J16.0	In any diagnosis. Exclude people under 2 months.
	Urinary tract infections, including pyelonephritis	N10-N12, N13.6, N15.1, N15.9, N28.9, N39.0, N39.9	As principal diagnosis

	Perforated/bleeding ulcer	K25.0-K25.2, K25.4-K25.6, K26.0-K26.2, K26.4-K26.6, K27.0-K27.2, K27.4-K27.6, K28.0-K28.2, K28.4-K28.6	As principal diagnosis
	Cellulitis	L02-L04, L08, L88, L98.0, L98.3	As principal diagnosis. Exclude cases with any procedure except where all procedures are in blocks 1820 to 2016, or if procedure is 30216-00, 30216-01, 30216-02, 30676-00, 30223-01, 30223-02, 30064-00, 90660-00, 90661-00 and this is the only listed procedure.
	Pelvic inflammatory disease	N70, N73, N74	As principal diagnosis
	Ear, nose and throat infections	H66, J02, J03, J06	As principal diagnosis
	Dental conditions	K02-K06, K08, K09.8, K09.0, K12, K13, K14.0	As principal diagnosis
	Convulsions and epilepsy	G40, G41, R56	As principal diagnosis
	Eclampsia	O15	As principal diagnosis
	Gangrene	R02, I70.24, E09.52	R02 in any diagnosis, I70.24 and E09.52 as principal diagnosis only
Cardiac procedure codes			
	Procedure codes for exclusion when identifying potentially preventable hospitalisations for congestive cardiac failure, angina and hypertension.	Exclude cases with the following cardiac procedure codes: Blocks 600-606, 608-650, 653-657, 660-664, 666, 669-682, 684-691, 693, 705-707, 717 and codes 33172-00[715], 33827-01[733], 34800-00[726], 35412-00[11], 38721-01[733], 90217-02[734], 90215-02[732].	

(a) This list of disease codes is the same list used to classify preventable diseases in the Aboriginal and Torres Strait Islander Health Performance Framework.

Source: AIHW 2015. National Healthcare Agreement: PI 18-Selected potentially preventable hospitalisations, 2015. Canberra: AIHW. Viewed 22 June 2016, <<http://meteor.aihw.gov.au/content/index.phtml/itemId/559032>>.

Table 8A.3.1 **Age standardised avoidable mortality death rates, by Indigenous status, State and Territory of usual residence, persons aged 0–74 years, 2010–2014 (a), (b), (c), (d), (e), (f)**

State/Territory	Number of deaths			Rate per 100 000 (h)		Variability bands (±)		Rate ratio (j)
	Aboriginal and Torres Strait Islander	Non-Indigenous (i)	Not stated	Aboriginal and Torres Strait Islander	Non-Indigenous (i)	Aboriginal and Torres Strait Islander	Non-Indigenous (i)	
NSW	1 534	39 249	314	242.7	105.3	29.4	2.4	2.3
Qld (g)	1 651	25 027	691	303.8	111.6	37.0	3.1	2.7
WA	1 265	11 426	383	479.3	98.5	67.8	4.1	4.9
SA	387	9 576	61	340.8	109.3	83.4	5.0	3.1
NT	1 345	954	9	633.9	128.9	86.5	19.0	4.9
NSW, Qld, WA, SA, and the NT	6 182	86 232	1 458	346.6	106.8	21.5	1.6	3.2

- (a) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Aboriginal and Torres Strait Islander identification in mortality data for these periods. Data for these five jurisdictions over-represent Aboriginal and Torres Strait Islander populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions.
- (b) This table presents data for Potentially Avoidable Deaths as defined in the National Healthcare Agreement PI 16 for 2015. It includes deaths from conditions that are potentially preventable through individualised care and/or treatable through existing primary or hospital care. Due to changes in the specification of the indicator, data presented here are not comparable with that in previous reports. Avoidable mortality causes are listed in table 8A.3.6.
- (c) Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (d) Although most deaths of Aboriginal and Torres Strait Islander Australians are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these statistics are likely to underestimate the Aboriginal and Torres Strait Islander mortality rate. It is also difficult to exactly identify the difference between the Aboriginal and Torres Strait Islander and non-Indigenous mortality rates because of these data quality issues.
- (e) These data exclude 1458 registered deaths where the Indigenous status was not stated for these causes of death, over the period 2010–14.
- (f) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).
- (g) Care should be taken when interpreting mortality rates for Queensland due to recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.

Table 8A.3.1 **Age standardised avoidable mortality death rates, by Indigenous status, State and Territory of usual residence, persons aged 0–74 years, 2010–2014 (a), (b), (c), (d), (e), (f)**

State/Territory	Number of deaths			Rate per 100 000 (h)		Variability bands (±)		Rate ratio (j)
	Aboriginal and Torres Strait Islander	Non-Indigenous (i)	Not stated	Aboriginal and Torres Strait Islander	Non-Indigenous (i)	Aboriginal and Torres Strait Islander	Non-Indigenous (i)	

(h) Aboriginal and Torres Strait Islander and non-Indigenous population estimates are available for census years only. In the intervening years, Aboriginal and Torres Strait Islander population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Aboriginal and Torres Strait Islander population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Aboriginal and Torres Strait Islander population projections from the 2011 Census-based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.

(i) Directly age-standardised death rates per 100 000, using the 2001 Australian standard population, by 5-year age group. See the 'Standard Population for use in Australian-Standardisation Table' data cube in *Australian Demographic Statistics, Dec 2012 (cat. no. 3101.0)*.

(j) Rate ratio is the mortality rate for Aboriginal and Torres Strait Islander Australians divided by the mortality rate for non-Indigenous Australians.

Total (age standardised) (i), (j)	412.8	34.1	137.6	3.0	285.8	27.1	76.1	3.8	346.6	21.5	106.8	3.2

(a) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010-2012 (final), 2013 (revised) and 2014 (preliminary). See Cause of Death, Australia, 2014 (cat.no. 3303.0) Explanatory Notes for further information.

(b) Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.

(c) This table presents data for Potentially Avoidable Deaths as defined in the National Healthcare Agreement PI 16 for 2015. It includes deaths from conditions that are potentially preventable through individualised care and/or treatable through existing primary or hospital care. Due to changes in the specification of the indicator, data presented here are not comparable with that in previous reports. Avoidable mortality causes are listed in table 8A.3.6.

TABLE 8A.3.2

Table 8A.3.2 **Avoidable mortality, by Indigenous status, age group and sex, persons aged 0–74 years, NSW, Queensland, WA, SA and the NT, 2010–2014 (a), (b), (c), (d), (e), (f), (g)**

Age group (years)	Males				Females				Persons			
	Deaths per 100 000				Deaths per 100 000				Deaths per 100 000			
	Aboriginal and Torres Strait Islander	Variability bands	Non-Indigenous	Rate ratio (h)	Aboriginal and Torres Strait Islander	Variability bands	Non-Indigenous	Rate ratio (h)	Aboriginal and Torres Strait Islander	Variability bands	Non-Indigenous	Rate ratio (h)

(d) Although most deaths of Aboriginal and Torres Strait Islander Australians are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these statistics are likely to underestimate the Aboriginal and Torres Strait Islander mortality rate. It is also difficult to exactly identify the difference between the Aboriginal and Torres Strait Islander and non-Indigenous mortality rates because of these data quality issues.

(e) These data exclude 1458 registered deaths where the Indigenous status was not stated over the period 2010–14.

(f) Aboriginal and Torres Strait Islander and non-Indigenous population estimates are available for census years only. In the intervening years, Aboriginal and Torres Strait Islander population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Aboriginal and Torres Strait Islander population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Aboriginal and Torres Strait Islander population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.

(g) Age-specific death rates for those aged under 1 are calculated per 100,000 live births for the mid-point year. Age-specific rates for those aged 1–4 and 0–4 years are calculated per 100,000 estimated resident population, using the average estimated resident population for 2010–2014, for those age groups. Age-specific rates for all other age groups are calculated per 100,000 estimated resident population for the mid-point year, for selected age group.

(h) Rate ratio is the mortality rate for Aboriginal and Torres Strait Islander Australians divided by the mortality rate for non-Indigenous Australians.

(i) Totals exclude those aged 75 years and over.

(j) Total rate is directly age-standardised death rates per 100,000, using the 2001 Australian Estimated Resident population, by 5-year age group.

(a) Avoidable mortality causes are listed in table 8A.3.6. It includes deaths from conditions that are potentially preventable through individualised care and/or treatable through existing primary or hospital care. Due to changes in specifications, data presented in this table are not comparable with the data in previous reports.

TABLE 8A.3.3

Table 8A.3.3 **Avoidable mortality, by cause of death and Indigenous status, persons aged 0–74 years, NSW, Queensland, WA, SA and the NT, 2010–2014 (a), (b), (c), (d), (e), (f), (g)**

Cause of death	Number			Per cent			No. per 100 000 (h)		Variability band		
	Aboriginal and Torres Strait Islander	Non- Indig.	Not stated	Aboriginal and Torres Strait Islander	Non- Indig.	Not stated	Aboriginal and Torres Strait Islander	Non- Indig.	Aboriginal and Torres Strait Islander	Non- Indig.	Ratio (i)
(b)	Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Aboriginal and Torres Strait Islander identification in mortality data for these periods. Data for these five jurisdictions over-represent Indigenous populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions.										
(c)	Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period. Cells with small values have been randomly assigned to protect the confidentiality of individuals, so some totals will not equal to the sum of their components. Cells with a zero value have not been affected.										
(d)	Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and non-Indigenous mortality rates because of these data quality issues.										
(e)	These data exclude 1458 registered deaths where the Indigenous status was not stated for these causes of death, over the period 2010–14.										
(f)	All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).										
(g)	Aboriginal and Torres Strait Islander and non-Indigenous population estimates are available for census years only. In the intervening years, Aboriginal and Torres Strait Islander population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Aboriginal and Torres Strait Islander population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Aboriginal and Torres Strait Islander population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.										
(h)	Directly age-standardised death rates per 100,000, using the 2001 Australian standard population, by 5-year age group. See the 'Standard Population for use in Australian-Standardisation Table' data cube in Australian Demographic Statistics, Dec 2012 (cat. no. 3101.0).										

TABLE 8A.3.3

Table 8A.3.3 **Avoidable mortality, by cause of death and Indigenous status, persons aged 0–74 years, NSW, Queensland, WA, SA and the NT, 2010–2014 (a), (b), (c), (d), (e), (f), (g)**

<i>Cause of death</i>	<i>Number</i>			<i>Per cent</i>			<i>No. per 100 000 (h)</i>		<i>Variability band</i>		
	<i>Aboriginal and Torres Strait Islander</i>	<i>Non- Indig.</i>	<i>Not stated</i>	<i>Aboriginal and Torres Strait Islander</i>	<i>Non- Indig.</i>	<i>Not stated</i>	<i>Aboriginal and Torres Strait Islander</i>	<i>Non- Indig.</i>	<i>Aboriginal and Torres Strait Islander</i>	<i>Non- Indig.</i>	<i>Ratio (i)</i>

(i) Rate ratio is the mortality rate for Aboriginal and Torres Strait Islander Australians divided by the mortality rate for non-Indigenous Australians.

(j) Other includes all avoidable mortality not specifically detailed in the table.

TABLE 8A.3.4

Table 8A.3.4 **Age-standardised mortality rates, rate ratios and rate differences, avoidable causes, persons aged 0–74 years, NSW, Queensland, WA, SA, and the NT, 1998 to 2014 (a), (b), (c), (d), (e), (f), (g)**

<i>Aboriginal and Torres Strait Islander rate (per 100 000)</i>				<i>Non-Indigenous rate (per 100 000)</i>				<i>Rate ratio (h)</i>			<i>Rate difference (i)</i>		
<i>Males</i>	<i>Females</i>	<i>Persons</i>	<i>Person Variability band</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>	<i>Person Variability band</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>
<p>(a) This table presents data for Potentially Avoidable Deaths as defined in the National Healthcare Agreement PI 16 for 2015. It includes deaths from conditions that are potentially preventable through individualised care and/or treatable through existing primary or hospital care. Due to changes in the specification of the indicator, data presented here are not comparable with that in previous reports. Avoidable mortality causes are listed in table 8A.3.6.</p> <p>(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 1998–2012 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).</p> <p>(c) Data based on reference year. See data quality statements for a more detailed explanation.</p> <p>(d) These data exclude 6848 registered deaths where the Indigenous status was not stated over the period 1998 to 2014.</p> <p>(e) Data are reported for NSW, Queensland, WA, SA and the NT only. These five jurisdictions are considered to have adequate levels of Aboriginal and Torres Strait Islander identification in mortality data. They do not represent an Australian total.</p> <p>(f) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by 5 year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.</p> <p>(g) Aboriginal and Torres Strait Islander and non-Indigenous population estimates are available for census years only. In the intervening years, Aboriginal and Torres Strait Islander population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Aboriginal and Torres Strait Islander population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Aboriginal and Torres Strait Islander population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.</p> <p>(h) Rate ratio is the rate for Aboriginal and Torres Strait Islander people divided by the rate for non-Indigenous people.</p> <p>(i) Rate difference is the rate for Aboriginal and Torres Strait Islander people minus the rate for non-Indigenous people.</p>													

TABLE 8A.3.4

Table 8A.3.4 **Age-standardised mortality rates, rate ratios and rate differences, avoidable causes, persons aged 0–74 years, NSW, Queensland, WA, SA, and the NT, 1998 to 2014 (a), (b), (c), (d), (e), (f), (g)**

<i>Aboriginal and Torres Strait Islander rate (per 100 000)</i>				<i>Non-Indigenous rate (per 100 000)</i>				<i>Rate ratio (h)</i>			<i>Rate difference (i)</i>		
			<i>Person Variability band</i>				<i>Person Variability band</i>						
<i>Males</i>	<i>Females</i>	<i>Persons</i>		<i>Males</i>	<i>Females</i>	<i>Persons</i>		<i>Males</i>	<i>Females</i>	<i>Persons</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>

(j) Average annual change in rates, rate ratios, and rate differences determined using linear regression analysis.

(k) Per cent change between 1998 and 2014 based on the average annual change over the period.

.. Not applicable.

Source: ABS (2015) Causes of Death, Australia cat. no. 3303.0; ABS (2014) Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026, cat. no. 3238.0.

TABLE 8A.3.5

Table 8A.3.5 **Avoidable mortality, by Indigenous status, persons aged 0–74 years, NSW, Qld, WA, SA and NT, 2010–14 (a), (b), (c), (d), (e), (f), (g)**

	Number			Per cent			Rate per 100 000 (h), (i)			
	Aboriginal and Torres Strait Islander	Non-Indigenous	Not stated	Aboriginal and Torres Strait Islander	Non-Indigenous	Not stated	Aboriginal and Torres Strait Islander	Non-Indigenous	Rate ratio (j)	Rate difference (k)
Avoidable mortality	6 182	86 232	1 458	60.9	50.0	60.9	346.6	106.8	3.2	239.8
Unavoidable mortality (l)	3 973	86 075	938	39.1	50.0	39.1	239.8	103.7	2.3	136.1
Total mortality (m)	10 155	172 307	2 396	100.0	100.0	100.0	586.4	210.5	2.8	375.9

- (a) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).
- (b) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only, which are considered to have adequate levels of Indigenous identification in mortality data. Data for these jurisdictions over-represent Indigenous populations in less urbanised and more remote locations, and should not be assumed to represent the experience in the other jurisdictions.
- (c) This table presents data for Avoidable Mortality as defined in the National Healthcare Agreement.
- (d) Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (e) Although most deaths of Aboriginal and Torres Strait Islander Australians are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these statistics are likely to underestimate the Aboriginal and Torres Strait Islander mortality rate. It is also difficult to exactly identify the difference between the Aboriginal and Torres Strait Islander and non-Indigenous mortality rates because of these data quality issues.
- (f) These data exclude 2396 registered deaths where the Indigenous status was not stated over the period 2010–14.
- (g) Care should be taken when interpreting mortality rates for Queensland due to recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.
- (h) Directly age-standardised using the 2001 Australian standard population, by 5-year age group up to 74.
- (i) Population data between Census years are based on assumptions about past and future levels of fertility, mortality and migration, and have a degree of uncertainty.

TABLE 8A.3.5

Table 8A.3.5 **Avoidable mortality, by Indigenous status, persons aged 0–74 years, NSW, Qld, WA, SA and NT, 2010–14 (a), (b), (c), (d), (e), (f), (g)**

<i>Number</i>			<i>Per cent</i>			<i>Rate per 100 000 (h), (i)</i>			
<i>Aboriginal and Torres Strait Islander</i>	<i>Non- Indigenous</i>	<i>Not stated</i>	<i>Aboriginal and Torres Strait Islander</i>	<i>Non- Indigenous</i>	<i>Not stated</i>	<i>Aboriginal and Torres Strait Islander</i>	<i>Non- Indigenous</i>	<i>Rate ratio (j)</i>	<i>Rate difference (k)</i>

(j) Rate ratio is the mortality rate for Indigenous Australians divided by the mortality rate for non-Indigenous Australians.

(k) Rate difference is the mortality rate for Indigenous Australians minus the mortality rate for non-Indigenous Australians.

(l) Unavoidable Mortality is all causes other than those specified as Avoidable Mortality.

(m) Totals exclude those aged 75 years and over.

Table 8A.3.6 **2015 ICD-10 codes for potentially avoidable deaths, by major cause of death group**

<i>Cause of death group</i>	<i>ICD-10 codes</i>	<i>Limits (age, sex)</i>
Infections		
Selected invasive infections	A38–A41, A46, A48.1, G00, G03, J02.0, J13–J16, J18, L03	
Viral pneumonia and influenza	J10–J12	
HIV/AIDS	B20–B24	
Cancer		
Colorectal	C18–C21	
Skin	C43, C44	
Breast	C50	
Cervix	C53	Female
Prostate	C61	
Kidney	C64	
Thyroid	C73	
Hodgkin's disease	C81	
Acute lymphoid leukaemia/Acute lymphoblastic leukaemia	C91.0	0-44 years
Diabetes		
Diseases of the circulatory system		
Rheumatic and other valvular heart disease	I00–I09, I33–I37	
Hypertensive heart and renal disease	I10–I13	
Ischaemic heart disease	I20–I25	
Cerebrovascular diseases	I60–I69	
Heart failure	I50, I51.1, I51.2, I51.4, I51.5	
Pulmonary embolism	I26	
Diseases of the genitourinary system		
Renal failure	N17–N19	
Diseases of the respiratory system		
COPD	J40–J44	
Asthma	J45, J46	
Diseases of the digestive system		
Peptic ulcer disease	K25–K27	
Maternal & infant causes		
Complications of the perinatal period	P00–P96	
Other conditions		
Complications of pregnancy, labour or the puerperium	O00–O99	
Selected external causes of morbidity and mortality		
Falls	W00–W19	
Fires, burns	X00–X09	

Table 8A.3.6 2015 ICD-10 codes for potentially avoidable deaths, by major cause of death group

<i>Cause of death group</i>	<i>ICD-10 codes</i>	<i>Limits (age, sex)</i>
Suicide and self-inflicted injuries	X60–X84, Y87.0	
Misadventures to patients during surgical and medical care	Y60–Y69	
Medical devices associated with adverse incidents in diagnostic and therapeutic use	Y70–Y82	
Surgical and other medical procedures as the cause of abnormal reaction of the patient, or of later complication, without mention of misadventure at the time of the procedure	Y83, Y84	
Other external causes of morbidity and mortality		
Transport accidents	V01–V99	
Exposure to inanimate mechanical forces	W20–W49	
Exposure to animate mechanical forces	W50–W64	
Accidental drowning and submersion	W65–W74	
Other accidental threats to breathing	W75–W84	
Exposure to electric current, radiation and extreme ambient air temperature and pressure	W85–W99	
Contact with heat and hot substances	X10–X19	
Contact with venomous animals and plants	X20–X29	
Exposure to forces of nature	X30–X39	
Accidental poisoning by and exposure to noxious substances	X40–X49	
Overexertion, travel and privation	X50–X57	
Accidental exposure to other and unspecified factors	X58, X59	
Assault	X85–Y09	
Event of undetermined intent	Y10–Y34	
Legal interventions and operations of war	Y35, Y36	
Drugs, medicaments and biological substances causing adverse effects in therapeutic use	Y40–Y59	
Sequelae of external causes of morbidity and mortality	Y85, Y86, Y87.1–Y89	

ICD-10 = International Statistical Classification of Diseases and Related Health Problems, 10th Revision. **HIV/AIDS** = Human Immunodeficiency Virus/Acquired Immune Deficiency Syndrome. **COPD** = Chronic Obstructive Pulmonary Disease.

(a) Potentially preventable deaths are those amenable to screening and primary prevention such as immunisation.

(b) Potentially treatable deaths are those amenable to therapeutic interventions

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Australia</i>
--	-------------	------------	------------	------------	-----------	-----------	------------	------------	-----------	------------------

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(c) Data for 2014-15 are rounded to the nearest hundred.

Table 8A.4.7 Age standardised current daily smokers aged 18 years and over, by State and Territory, 2001, 2004-05, 2008, 2011-13 and 2014-15 (a), (b)

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT (c)</i>	<i>Australia</i>
Rate difference (e)		24.5	28.9	24.5	25.4	19.1	8.9	13.3	34.4	26.8

- (a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.
- (c) The sample size in the NT was considered too small to produce reliable estimates for the NT in the ABS 2004-05 National Health Survey, but NT records in the survey have been attributed appropriately to national estimates.
- (d) Rate ratio is the age standardised Aboriginal and Torres Strait Islander proportion divided by the age standardised non-Indigenous proportion.
- (e) Rate difference is the age standardised Aboriginal and Torres Strait Islander proportion less the age standardised non-Indigenous proportion.

--	-------------	------------	------------	------------	-----------	-----------	------------	------------	-----------	-------------

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(c) Rate ratio is the age standardised Aboriginal and Torres Strait Islander proportion divided by the age standardised non-Indigenous proportion.

(d) Rate difference is the age standardised Aboriginal and Torres Strait Islander proportion less the age standardised non-Indigenous proportion.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(c) Age standardised Aboriginal and Torres Strait Islander data for very remote areas are not available as there are no comparable non-Indigenous data from the 2001, 2004-05 and 2007-08 National Health Surveys.

(d) Data from the 1995 National Health Survey are for non-remote areas only.

na Not available. .. Not applicable.

Table 8A.4.12 **Current daily smokers aged 15 years or over, by sex by age, non-remote areas only, 1995, 2001, 2004-05, 2008, 2011-13 and 2014-15 (a), (b)**

	<i>Aboriginal and Torres Strait Islander</i>			<i>Non-Indigenous</i>		
	<i>Proportion (%)</i>	<i>RSE (%)</i>	<i>95 per cent CI (±)</i>	<i>Proportion (%)</i>	<i>RSE (%)</i>	<i>95 per cent CI (±)</i>
Total 18+	50.0	7.4	7.3	23.4	0.8	0.4
Age Standardised total 18+	46.0	8.8	7.9	23.0	0.8	0.4

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

Underweight (BMI less than 18.5)	±	0.5	0.6	0.5	0.5	0.5	0.5	0.4	0.9	0.3
Normal weight (BMI 18.5–24.9)	±	1.7	1.8	1.9	1.9	1.8	2.1	2.8	2.7	0.9
Overweight (BMI 25.0–29.9)	±	1.5	1.8	1.8	1.9	1.9	2.0	2.3	3.3	0.7
Obese (BMI over 30.0)	±	1.6	1.8	1.6	2.1	1.8	2.4	2.2	2.6	0.8

(a) Percentage rates are age standardised to the 2001 population.

(b) Population excludes persons for whom BMI could not be calculated.

(c) Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution. A 95 per cent confidence interval is also reported against each estimate.

(d) 2012-13 data are based on measured BMI and are not comparable to 2004-05 data which are based on self-reported BMI.

(e) Data for Aboriginal and Torres Strait Islander people are from the Australian Aboriginal and Torres Strait Islander Health Survey.

(f) Data for non-Indigenous people are from the Australian Health Survey and was not collected in very remote areas.

np Not published.

(a) Proportions have been age standardised to the 2001 Australian Estimated Resident Population.

(b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Comprises remote and very remote areas. National Health Surveys, from which data are reported for the non-Indigenous population exclude very remote areas.

(d) Represents a K5 score of 5–11.

TABLE 8A.7.1

Table 8A.7.1 **K5 level of psychological distress, people aged 18 years or over (age standardised) by remoteness, 2004-05, 2008, 2011-13 and 2014-15 (a), (b)**

- (a) Levels of psychological distress are derived from the Kessler Psychological Distress Scale (K-5).
- (b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (c) Represents a K5 score of 5–11.
- (d) Represents a K5 score of 12–25.
- (e) The rate ratio is calculated by dividing the age standardised rate for Aboriginal and Torres Strait Islander people by the corresponding age standardised rate for non-Indigenous people. The rate ratios are not based on the rates included in the table.
- (f) Totals for Aboriginal and Torres Strait Islander Australians exclude a small number of people for whom responses were provided by proxy but who were not present at interview.

Total (d)	100.0	–	–	100.0	–	–	100.0	–	–

(a) Relates to the four week period prior to interview.

(b) Proportions have been age standardised to the 2001 Australian Estimated Resident Population.

(c) Proportions with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Proportions with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) Includes not known and not stated responses and refusals.

(e) Total excludes a small number of persons for whom responses were provided by proxy but who were not present at interview.

– Nil or rounded to zero.

(%)	(%)	cent <i>CI</i>	(%)	(%)	cent <i>CI</i>	(%)	(%)	cent <i>CI</i>	(%)	(%)	cent <i>CI</i>	(%)	(%)	cent <i>CI</i>
		(±)			(±)			(±)			(±)			(±)

(a) Relates to feelings in the four week period prior to interview.

(b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Total excludes a small number of persons for whom responses were provided by proxy but who were not present at interview.

(d) Includes 'not known' responses and refusals.

– Nil or rounded to zero.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate.

(b) Relates to the four week period prior to interview.

(c) Includes not known and not stated responses and refusals.

– Nil or rounded to zero.

(a) Relates to feelings in the four week period prior to interview.

(b) Proportions have been age standardised to the 2001 Australian Estimated Resident Population.

(c) Proportions with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is reported against each estimate.

(b) Relates to the four week period prior to interview.

(c) Data for very remote areas is not available for the non-Indigenous population because it is not considered reliable. Total remote is not comparable between the Aboriginal and Torres Strait Islander and non-Indigenous population.

(d) Includes not known and not stated responses and refusals.

na Not available.

(a) Relates to feelings in the four week period prior to interview.

(b) Includes 'not known' responses and refusals.

(c) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(a) Relates to feelings in the four week period prior to interview.

(b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Includes 'not known' responses and refusals.

(d) Total for 2012-13 AATSIHS excludes a small number of persons for whom responses were provided by proxy but who were not present at interview.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is reported against each estimate.

TABLE 8A.7.27

Table 8A.7.27 **Selected indicators of positive well being, Aboriginal and Torres Strait Islander people aged 18 years or over, by remoteness, 2004–05 (a), (b), (c)**

(a) The ICD-10-AM codes are for principal diagnosis only. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).

(b) Data are reported by State or Territory of usual residence of the patient hospitalised.

(c) The volume of separations in NSW may not be directly comparable to other jurisdictions due to variations in admission practices for patients treated in the Emergency Department.

(d) Data for individual jurisdictions exclude separations from private hospitals in the NT, Tasmania and the ACT.

	<i>Major cities</i>	<i>Inner and outer regional combined</i>	<i>Remote and very remote combined</i>
(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).			
(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of the hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.			
(c) Rates per 100 000 population are calculated using ABS Estimated Resident Population by remoteness classification and projected Indigenous population by remoteness based on the 2011 Census. Rates were directly age standardised to the 2001 Australian population.			
(d) Non-Indigenous includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.			
(e) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

- (a) Data for episodes of community residential care should be interpreted with caution due to the varying quality and completeness of Indigenous identification across jurisdictions.
- (b) Queensland does not have any government-operated residential mental health services. Tasmanian information contains data for government-funded residential units operated by the non-government sector in that state, being the only jurisdiction providing this level of reporting. The NT did not have any community residential units in 2005-06.
- (c) For NSW, Confused and Disturbed Elderly (CADE) residential mental health services were reclassified as admitted patient hospital services from 1 July 2007. All data relating to these services have been reclassified from 2007-08 onwards. Comparison of NSW data over time therefore should be approached with caution.
- (d) The rates were directly aged standardised against the Australian Estimated Resident Population as at 30 June 2001.
- (e) Includes patients identified as being either of Aboriginal but not Torres Strait Islander origin, Torres Strait Islander but not Aboriginal origin, Aboriginal and Torres Strait Islander origin and patients identified as of Aboriginal or Torres Strait Islander origin.
- (f) The rate ratio is equal to the service use (episodes, contacts or separations) rate for Aboriginal and Torres Strait Islander Australians divided by the service use rate for non-Indigenous Australians.
- (g) Data for community mental health service contacts should be interpreted with caution. Across jurisdictions, the data quality and completeness of Aboriginal and Torres Strait Islander identification varies or is unknown. See *Mental Health Services in Australia* (mhsa.aihw.gov.au/home) for further information.
- (h) Includes data for people where Indigenous status was missing or not reported.

Table 8A.7.35 **Specialised mental health care reported, by Indigenous status, 2005-06 to 2013-14**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Total</i>
(i)	Admitted patient separations refers to those non-ambulatory separations when a patient undergoes a hospital's formal admission process, completes an episode of care and 'separates' from the hospital, excluding ambulatory-equivalent separations. Separations for which care type was reported as Newborn with no qualified days and records for Hospital boarders and Posthumous organ procurement have been excluded. Comprises separations with and without mental health-related principal diagnoses but with specialised psychiatric care.									
(j)	Interpretation of differences between jurisdictions needs to be undertaken with care as they may reflect different service delivery and admission practices and/or differences in the types of establishments categorised as hospitals.									
(k)	Includes only public hospital separations for the NT.									
(l)	Indigenous status data for NSW, Victoria, Queensland, WA, SA and the NT public hospitals are considered to be of acceptable quality for analytical purposes. Aboriginal and Torres Strait Islander identification is likely to be incomplete and to vary among jurisdictions. Total includes data for these jurisdictions only.									
(m)	Data were not available for Victoria in 2011–12 and 2012-13 due to service level collection gaps resulting from protected industrial action during this period. Victoria required that data for 2011–12 and 2012-13 be excluded from all totals, with no proxy data to be included for Victoria when calculating national totals. Industrial action in Tasmania in 2011–12 and 2012-13 has affected the quality and quantity of Tasmania's data (see the Mental Health Services in Australia online data source of the Community mental health care section).									
(n)	Totals include only those jurisdictions that provided data. Rates were calculated using a methodology which accounts for missing data, as detailed in the online technical information. Comparisons between jurisdictions and over time should be made with caution.									
	– Nil or rounded to zero. na Not available. np Not published. .. Not applicable.

(a) Mental and behavioural disorders include ICD-10 codes F00-F99.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010-12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).

(c) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all people in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 people. SDRs in this table have been calculated using the indirect method, age standardised by 5 year age group to 75 years and over. Rates calculated using the direct method.

(d) Data are presented in five-year groupings due to the volatility of small numbers each year.

(e) Data based on reference year.

(f) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

Table 8A.7.36 Mental and behavioural disorders, age standardised death rates, by Indigenous status (age standardised), by sex, by State and Territory, 2010-2014 (rate per 100 000 population) (a), (b), (c), (d), (e), (f)

	<i>Aboriginal and Torres Strait Islander (g)</i>			<i>Non-Indigenous (h)</i>			<i>Rate ratio (i)</i>		
	<i>Males</i>	<i>Females</i>	<i>Persons</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>
(g)	Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Aboriginal and Torres Strait Islander across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.								
(h)	Denominators used in the calculation of rates for the Indigenous population are Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS Cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Aboriginal and Torres Strait Islander population have been derived by subtracting Aboriginal and Torres Strait Islander population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.								
(i)	Rate ratio is the Aboriginal and Torres Strait Islander rate divided by the non-Indigenous rate								
(j)	Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.								
(k)	Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These 5 states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis. Total includes data for NSW, Queensland, WA, SA and the NT only.

NSW, Qld, WA, SA, and the NT (i), (j), (k), (l)	'000	–	1.0	6.6	52.6	10.7	0.1	0.5	1.2	88.5	35.5
Variability bands	±	–	2.1	5.9	13.4	2.6	0.1	0.3	0.5	2.4	0.9

(a) Mental and behavioural disorders include ICD-10 codes F00-F99.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).

(c) Data are presented in five-year groupings due to the volatility of small numbers each year.

(d) Data based on reference year.

(e) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

(f) Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Aboriginal and Torres Strait Islander across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Aboriginal and Torres Strait Islander and non-Indigenous data.

(g) Includes age not stated.

(h) Data cells with small values have been randomly assigned to protect the confidentiality of individuals. As a result, some totals will not equal the sum of their components. It is important to note that cells with a zero value have not been affected by confidentialisation.

(i) Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.

(j) Data include NSW, Queensland, WA, SA and the NT only. These 5 states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.

TABLE 8A.7.37

Table 8A.7.37 **Mental and behavioural disorders death rates, by Indigenous status, by age, 2010–2014 (a), (b), (c), (d), (e)**

	Aboriginal and Torres Strait Islander (f)					Non-Indigenous					
Unit	Under 25	25–34	35–44	45 and over	All ages (g), (h)	Under 25	25–34	35–44	45 and over	All ages (g), (h)	

(k) Crude age specific rates calculated per 100 000 Estimated Resident Population for each age group for the midpoint year. Crude rates cannot be compared across across years. Crude rates cannot be compared to age standardised rates.

(l) Denominators used in the calculation of rates for the Indigenous population are Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.

– Nil or rounded to zero.

(a) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).

(b) Data are based on State or Territory of usual residence.

(c) Intentional self-harm includes ICD-10 codes X60-X84 and Y87.0.

(d) Data are presented in five-year groupings due to the volatility of small numbers each year.

(e) Data based on reference year.

Table 8A.8.1 Deaths from intentional self-harm, by State and Territory, by Indigenous status, by sex, 2010–2014 (a), (b), (c), (d), (e), (f), (g)

	<i>Unit</i>	<i>NSW</i>	<i>Qld (h)</i>	<i>WA</i>	<i>SA</i>	<i>NT</i>	<i>Total (i)</i>
(f)	Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Aboriginal and Torres Strait Islander Australians across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Aboriginal and Torres Strait Islander and non-Indigenous data.						
(g)	Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.						
(h)	Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.						
(i)	Total includes data for NSW, Queensland, WA, SA and the NT only. These five states and territories have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.						
(j)	Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.						
(k)	Denominators used in the calculation of rates for the Aboriginal and Torres Strait Islander population are Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS Cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Aboriginal and Torres Strait Islander population have been derived by subtracting Aboriginal and Torres Strait Islander population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.

Males	856	9 357	217	237.4	82.1	259.3	83.2	3.1
Females	1 351	17 404	278	374.6	151.2	371.0	158.9	2.3
Persons	2 207	26 763	495	306.0	116.9	314.7	120.5	2.6
2013-14								
Males	774	8 737	221	219.5	77.8	241.2	78.4	3.1
Females	1 363	16 242	264	385.7	143.1	389.1	150.2	2.6
Persons	2 137	24 979	485	302.7	110.6	315.2	113.7	2.8
2012-13								
Males	824	9 165	215	238.9	82.8	262.6	83.4	3.1
Females	1 231	16 635	276	355.4	149.0	360.2	155.9	2.3
Persons	2 055	25 801	491	297.3	116.1	311.0	119.1	2.6

(a) Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with a principal diagnosis of injury and poisoning (ICD-10-AM codes S00-T98) and a first reported external cause reported for ICD-10AM codes 'X60–X84', based on the International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification. Data for this report are based on the AIHW standard methodology of principal diagnosis of self-harm. These data will not be comparable to results published in previous reports where a broader count was reported.

(b) Data are reported for public and private hospitals in all jurisdictions.

(c) Rates per 100 000 population, directly age standardised using the 2001 Australian standard population.

(d) Rate ratio is the Aboriginal and Torres Strait Islander rate divided by the non-Indigenous rate.

Source: AIHW (unpublished) National Hospital Morbidity Database.

(a) Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with a principal diagnosis of injury and poisoning (ICD-10-AM codes S00-T98) and a first reported external cause reported for ICD-10AM codes 'X60–X84', based on the International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification. Data for this report are based on the AIHW standard methodology of principal diagnosis of self-harm. These data will not be comparable to results published in previous reports where a broader count was reported.

(b) Data are reported for public and private hospitals in all jurisdictions.

(c) Rates per 100 000 population, directly age standardised using the 2001 Australian standard population.

(d) Includes hospitalisations where Indigenous status was recorded as Non-Indigenous or not stated.

(e) Rate ratio is the Aboriginal and Torres Strait Islander rate divided by the Other rate.

Remote and very remote	475	387	18	328.0	101.2	326.1	109.7	3.0
Total (f)	2 055	25 801	491	297.3	116.1	311.0	119.1	2.6

(a) Data are from public and private hospitals in all jurisdictions.

(b) Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with a principal diagnosis of injury and poisoning (ICD-10-AM codes S00-T98) and a first reported external cause reported for ICD-10AM codes 'X60–X84', based on the International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification. Data for this report are based on the AIHW standard methodology of principal diagnosis of self-harm. These data will not be comparable to results published in previous reports where a broader count was reported.

Table 8A.8.5 **Non-fatal hospitalisations for intentional self-harm by Indigenous status, by remoteness of residence, 2012-13 to 2014-15 (a), (b), (c)**

	Number			Crude rate per 100 000 population		Age standardised rate per 100 000 population (d)		
	Aboriginal and Torres Strait Islander	Non-Indigenous	Not stated	Aboriginal and Torres Strait Islander	Non-Indigenous	Aboriginal and Torres Strait Islander	Non-Indigenous	Rate ratio (e)

(c) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(d) Rates are per 100 000 population. Rates by remotenes are calculated using the ABS Estimated Resident Population by remoteness and Indigenous population projections by remoteness based on the 2011 Census, and are directly age standardised using the 2001 Australian population.

(e) Rate ratio is the Aboriginal and Torres Strait Islander rate divided by the non-Indigenous rate.

(f) Includes migratory areas and separations with unknown remoteness area.

9 Economic participation

Strategic areas for action

In 2008, COAG agreed to the *National Partnership Agreement on Indigenous Economic Participation* (expired 30 June 2013) (COAG 2008) and the *National Partnership Agreement on Remote Indigenous Housing* (COAG 2009) with the aim of improving employment and economic development opportunities for Aboriginal and Torres Strait Islander Australians.

Economic participation can affect people's wellbeing in many ways. The indicators in this strategic area for action focus on the key factors that contribute to positive economic outcomes, as well as measures of the outcomes themselves:

- employment by full time/part time status, sector and occupation (section 9.1) — having a job can lead to improved incomes for families and communities, and also enhances self-esteem and reduces social alienation. This indicator, which is closely associated with the COAG target of employment (section 4.7) examines some of the characteristics of the employment undertaken by Aboriginal and Torres Strait Islander Australians
- Indigenous owned or controlled land and business (section 9.2) — land can be important to Aboriginal and Torres Strait Islander Australians for a range of cultural, social and economic reasons. The economic benefits flowing from land depend on factors such as location, property rights, governance arrangements of landholding bodies, and the aspirations of the Aboriginal and Torres Strait Islander landowners. Not all Indigenous businesses are necessarily associated with land
- home ownership (section 9.3) — home ownership, although not an aspiration of all Aboriginal and Torres Strait Islander Australians, is an important indicator of wealth and saving. (The availability of appropriate, affordable and secure housing is covered in section 10.1)

-
- income support (section 9.4) — although provision of income support can prevent individuals from experiencing deprivation, reliance on income support is correlated with the disadvantages that accompany low socioeconomic status (see discussion of individual and household income in section 4.10) and can contribute to long-term welfare dependency.

As noted above, economic participation is closely related to the COAG employment target (section 4.7) and the headline indicator on household and individual income (section 4.10).

The extent to which people participate in the economy is closely related to their personal circumstances (Hunter and Gray 2012). Other COAG targets and headline indicators that can directly influence economic participation are:

- early childhood education (section 4.3)
- reading, writing and numeracy (section 4.4)
- school attendance in years 1 to 10 (section 4.5)
- year 12 attainment (section 4.6)
- disability and chronic disease (section 4.9)
- imprisonment and juvenile detention rates (section 4.13).

In addition, improving financial literacy facilitates and supports individuals, families and communities to progressively achieve greater financial security and independence by making better financial decisions, including budgeting and purchase of financial products and services (ASIC 2014).

Outcomes in the economic development area can be affected by outcomes in several other strategic areas, or can influence outcomes in other areas, including:

- governance, leadership and culture (chapter 5)
- early child development (chapter 6)
- education and training (school engagement, transition from school to work) (chapter 7)
- healthy lives (chapter 8)
- safe and supportive communities (alcohol, drug and substance misuse and harm) (chapter 11).

Attachment tables for this chapter are identified in references throughout this chapter by an ‘A’ suffix (for example, table 9A.1.1). These tables can be found on the review web page (www.pc.gov.au/oid2016).

9.1 Employment by full time/part time status, sector and occupation¹

Box 9.1.1 Key messages

- In 2014-15, 63.1 per cent of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years were in full time employment, an increase from 54.5 per cent in 2002. This compares with 69.5 per cent of non-Indigenous Australians in 2014 (table 9A.1.1).
- For Aboriginal and Torres Strait Islander Australians, the proportion of employed people in remote areas employed full time has increased from 45.3 per cent in 2004-05 to 60.5 per cent in 2014-15 (the proportion in non-remote areas has remained at similar levels from 2004-05, with 63.6 per cent in 2014-15) (table 9A.1.1).
- Nationally in 2011, over three-quarters of employed Aboriginal and Torres Strait Islander Australians aged 15–64 years (76.8 per cent) worked in the private sector, compared with 84.3 per cent of employed non-Indigenous Australians (table 9A.1.5), and one in five were in professional or managerial positions (table 9A.1.14).

Box 9.1.2 Measures of employment by full time/part time status, sector and occupation

There are three main measures for this indicator:

- *Working hours (full time or part time)* is defined as the proportions of employed people who are employed full time and part time. The main data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent available data for 2014-15. Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/National Health Survey (NHS)/General Social Survey (GSS), with the most recent data for 2014 from the GSS. Supplementary data are also available from the Census of Population and Housing, with the most recent available data for 2011. Survey and Census data are not directly comparable.
- *Sector of employment (public or private)* is defined as the proportion of employed people employed in each sector. The main data source is the Census, with the most recent available data for 2011. AATSIHS/NATSISS data are not available for this measure.
- *Occupation* is defined as the proportion of employed people employed in each occupation type. The main data source is the Census, with the most recent available data for 2011. AATSIHS/NATSISS data are not available for this measure.

Data are also reported for a supplementary measure of the proportion of employed people in each industry.

(continued next page)

¹ The Steering Committee notes its appreciation to Ms Heron Loban, Griffith University, who reviewed a draft of this section of the report.

Box 9.1.2 (continued)

AATSIHS/NATSISS data are reported for persons aged 18–64 years to enable comparisons of outcomes in 2004–05, 2008, 2011–13 and 2014–15 with those in 1994 and 2002. Census data are available for persons aged 15–64 years.

Data are available for all jurisdictions by age, sex, and remoteness.

This indicator is closely related to the employment indicator in section 4.7, which includes data on labour market participation, employment and unemployment rates, and is aligned with the associated National Indigenous Reform Agreement (NIRA) indicator. This section examines some of the characteristics of the employment undertaken by Aboriginal and Torres Strait Islander Australians, including occupation and sector of employment.

CDEP

Census data are used for reporting on sector of employment and occupation, as they provide the most detailed information. However, these data are influenced by the Community Development Employment Projects (CDEP) program, which had characteristics of both employment and ‘work for the dole’ (more information on CDEP is provided in section 4.7). In the Census, CDEP participants were only separately identified for discrete Aboriginal and Torres Strait Islander communities (the CDEP item was not asked of people in other areas). These CDEP participants were classed as employed (rather than as unemployed or not in the labour force).

From 1 July 2013, remote CDEP participants were transitioned to the Australian Government’s Remote Jobs and Communities Program (RJCP). People who had been receiving CDEP wages who transitioned to RJCP retained eligibility for CDEP wages until wages ceased on 30 June 2015, coinciding with the start of the Community Development Program (CDP). RJCP participants were not classified as employed in the 2014–15 NATSISS unless they held another job (ABS 2016).

Full time and part time employment status

While many people work part time by preference (ABS 2014; Hunter and Gray 2016) for others it may reflect underemployment — which occurs when an individual would like to, and is available to work more hours. Underemployment has been found to be particularly common among Aboriginal and Torres Strait Islander employees (Hunter 2002).

In 2014–15, 63.1 per cent of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years were in full time employment, an increase from 54.5 per cent in 2002. This compares with 69.5 per cent for non-Indigenous Australians in 2014–15 (figure 9.1.1).

Figure 9.1.1 Proportion of employed people aged 18–64 years in full time employment, 2002 to 2014–15^{a, b, c}

a Includes CDEP employment for 2002, 2004-05, 2008 and 2011-13. **b** There is no non-Indigenous comparator available for 2002. **c** Error bars represent 95 per cent confidence intervals around each estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey (NATSISS) 2002; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey (NATSIHS) 2004-05; ABS (unpublished) National Health Survey (NHS) 2004-05; ABS (unpublished) NATSISS 2008; ABS (unpublished) NHS 2007-08; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS) 2012-13 (core component); ABS (unpublished) Australian Health Survey (AHS) 2011-13 (2011-12 Core component); ABS (unpublished) NATSIHS 2004-05; ABS (unpublished) General Social Survey (GSS) 2014; table 9A.1.1.

The gap in full time employment between Aboriginal and Torres Strait Islander and non-Indigenous Australians has narrowed (from 11.5 percentage points in 2004-05 to 6.4 per cent in 2014-15), due to the combination of an increase in Aboriginal and Torres Strait Islander full time employment in remote areas (from 45.3 per cent in 2004-05 to 60.5 per cent in 2014-15) and a small decrease in non-Indigenous full time employment (from 71.4 per cent in 2004-05 to 69.5 per cent in 2014-15) (table 9A.1.1).

Data for this measure for people aged 15–64 years by State/Territory, age, sex and remoteness are available from the Census back to 2001 (tables 9A.1.3-4).

Employment by sector and occupation

Data from the 2011 Census show that over three-quarters (76.8 per cent) of employed Aboriginal and Torres Strait Islander Australians aged 15–64 years worked in the private sector, with 23.2 per cent working in the public sector. This compares with 84.3 per cent of employed non-Indigenous Australians working in the private sector, and 15.7 per cent

working in the public sector. The proportion of employed Aboriginal and Torres Strait Islander Australians working in the private sector in 2011 was lower in remote and very remote areas than in other areas (table 9A.1.5).

Under the National Partnership Agreement on Indigenous Economic Participation [which expired on 30 June 2013] (COAG 2008), COAG agreed to a national target of at least 2.7 per cent of public sector employment for Aboriginal and Torres Strait Islander Australians by 2015, to reflect the expected national Aboriginal and Torres Strait Islander working age population share. In 2015, the target was amended to 3 per cent by 2018 in the Commonwealth Aboriginal and Torres Strait Islander Employment Strategy (APSC 2015a). The 2014-15 State of the Service Report showed Aboriginal and Torres Strait Islander representation in the Australian (Commonwealth) public sector as at 30 June 2015 was 2.6 per cent — up from 2.5 per cent in 2014 and 2.3 per cent in 2013 (APSC 2013, 2015). Whilst this proportion has increased in 2014 and 2015, Biddle and Lahn (2016) reported that during this period the rate of separation for Aboriginal and Torres Strait Islander Australians was higher than for non-Indigenous Australians, with reasons for leaving² including dissatisfaction with career prospects and opportunities, ability to influence decisions, racism and lack of cultural awareness in organisations.

Professional and managerial occupations require a skill set corresponding to a bachelor degree or higher qualification (Taylor et al. 2012). Information on participation and attainment of tertiary education can be found in section 4.8 of this report. Data from the 2011 Census show that of employed Aboriginal and Torres Strait Islander Australians aged 15–64 years whose occupation was known, 20.1 per cent were in professional or managerial occupations (table 9A.1.14), an increase from 16.2 per cent in 2001 (table 9A.1.16). The proportion for non-Indigenous Australians in 2011-12 was 34.8 per cent (table 9A.1.14), an increase from 32.6 per cent in 2001 (table 9A.1.16).

Employment by industry

In 2014-15, the largest proportion of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years were in the ‘health care and social assistance’ (15.3 per cent) and ‘construction’ (10.6 per cent) industry sectors (similar proportions to 2008), whilst the proportion for ‘public administration and safety’ has decreased over this period from 12.7 per cent to 9.7 per cent (tables 9A1.17 and 9A1.21). For non-Indigenous employed people, the largest proportions were employed in the ‘healthcare and social assistance’ (12.5 per cent) and ‘retail trade’ (10.2 per cent) industry sectors (tables 9A1.18 and 9A1.22).

Census data for 2011 show similar patterns (tables 9A.1.23 and 9A.1.25) to the survey data.

² Reasons for leaving were based on Biddle and Lahn (2016) analysis of responses to a series of semi-structured interviews with 34 Aboriginal and Torres Strait Islander people previously or currently employed with the APS.

Things that work

A number of programs are targeted at increasing Aboriginal and Torres Strait Islander employment. Box 9.1.3 provides an example of a promising program that is improving employment outcomes.

Box 9.1.3 Things that work — improving Indigenous employment

Although it has not been formally evaluated, the Steering Committee has identified the Mossman Gorge Centre as a promising program worth further examination, particularly the cost-effectiveness of the program.

Mossman Gorge Centre (Queensland) opened in June 2012. The Centre is an Aboriginal and Torres Strait Islander eco-tourism development developed by the Indigenous Land Corporation (ILC) in collaboration with the local Kuku Yalanji people, on land purchased through the ILC's Land Acquisition program and supported through the Indigenous Employment Program. It offers visitors improved access to the Mossman Gorge World Heritage area (including a café and art gallery, shuttle access to the gorge and a choice of Aboriginal cultural tours) as well as providing employment and training opportunities for Aboriginal and Torres Strait Islander people. The Centre received 276 000 visitors in 2014-15, and revenue increased to \$3.8 million. (ILC 2015).

Aboriginal and Torres Strait Islander employment is a key outcome of the centre and in 2014-15, 90 per cent of the Centre's staff were Aboriginal and/or Torres Strait Islander (ILC 2015). To assist Aboriginal and Torres Strait Islander Australians to achieve employment, a residential training facility for up to 20 students was built beside the Centre. The training facility provides local people with accredited skills that enable them able to work at the Centre and in broader hospitality and tourism industries. In 2014-15, 17 trainees at the Centre graduated with Certificate II or III hospitality and tourism qualifications, and were employed at the Centre and elsewhere (ILC 2015).

9.2 Indigenous owned or controlled land and business³

Box 9.2.1 Key messages

- Ownership and control of land and business can provide a range of social and economic benefits to Aboriginal and Torres Strait Islander Australians, including increased income and employment. However, there are barriers that can prevent realisation of these benefits by Aboriginal and Torres Strait Islander owners.
- Indigenous Land Corporation (ILC) data show that, in February 2016, Aboriginal and Torres Strait Islander Australians collectively owned or controlled 16.1 per cent of land in Australia, with most of this land (98.0 per cent) in very remote areas (table 9A.2.2).
- Nationally at 30 June 2015, native title had been determined to exist in 28.4 per cent of Australia (table 9A.2.3) and 998 registered Indigenous Land Use Agreements (ILUAs)⁴ covered 27.5 per cent of Australia (table 9A.2.5), with proportions greatest in very remote areas (tables 9A.2.4 and 9A.2.6).
- In 2014-15, 10.2 per cent of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years were self-employed — an increase from 5.8 per cent in 2011–13 (the proportion did not change significantly from 1994 to 2011–13). For non-Indigenous Australians, the proportion decreased from 19.2 per cent in 1994 to 10.5 per cent in 2011–13, before increasing to 15.4 per cent in 2014-15 (table 9A.2.13).

Box 9.2.2 Measures of Indigenous owned or controlled land and business

There are five main measures for this indicator.

- *Land tenure*. The different forms of land tenure reported overlap and cannot be aggregated.
 - *Indigenous owned or controlled land* is defined as the proportion of all land which is Indigenous owned or controlled. Indigenous owned or controlled land may be freehold, leasehold, crown, license, Aboriginal Deed of Grant in Trust or not stated tenure. The most recent available data for this measure are from the ILC, as at February 2016 (all jurisdictions; remoteness).
 - *Native title* is defined as the proportion of land where native title has been found to exist wholly or partially. This is measured as at 30 June each year.

(continued next page)

³ The Steering Committee notes its appreciation to Ms Heron Loban, Griffith University, who reviewed a draft of this section of the report.

⁴ ILUAs provide an alternative mechanism for resolving native title issues, and may precede or follow a determination of native title, or might be negotiated in the place of such a determination. ILUAs are agreements about the use and management of land and waters, made between one or more native title groups and other parties such as mining companies (NNTT 2010).

Box 9.2.2 (continued)

- *Indigenous land use agreements* (ILUAs) has two sub-measures, defined as:
 - ... the number of ILUAs that intersect each State/Territory
 - ... the proportion of land subject to ILUAs

The most recent available data for these two measures are for 30 June 2015, from the National Native Title Tribunal (NNTT) (all jurisdictions; remoteness). Historical data (2013 and earlier) have been updated so that they are consistent with new data for 2014 and 2015. Therefore, data should not be compared with data in earlier editions of this Report.

- *Economic benefits of Indigenous rights to land* is reported using qualitative information about: home ownership; service delivery; the customary economy; tradeable assets; eco-services/land management and commercial businesses. Supporting information is also provided on financial literacy.
- *Self-employment and Indigenous business* is defined as the number of employed people aged 18–64 years who are self-employed. The main data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS) with the most recent data for 2014-15 from the NATSISS (all jurisdictions; age; sex; non-remote areas only). Data for the non-Indigenous population are sourced from the ABS Australian Health Survey (AHS)/National Health Survey (NHS)/General Social Survey (GSS), with data available for 2014 from the GSS. Supplementary data are available from the ABS Census of Population and Housing (Census) with the most recent data for 2011 (all jurisdictions; age; sex; remoteness).

Ownership and control of land can provide a range of benefits to Aboriginal and Torres Strait Islander Australians. Land ownership may lead to greater autonomy and economic independence, and more political influence. It can also deliver commercial benefits like increased income, employment and profits (Altman and Dillon 2004). Aboriginal and Torres Strait Islander owned businesses (which may or may not be associated with Indigenous owned or controlled land) can provide a source of employment and income for individuals and communities (Forrest 2014).

The focus of this section is on Indigenous owned or controlled land and business as measures of economic participation. The social and cultural importance of land to Aboriginal and Torres Strait Islander Australians is discussed in section 5.8 (access to traditional lands and waters).

Indigenous owned and controlled land

This section examines the extent to which Aboriginal and Torres Strait Islander Australians have communal rights over land. Although similar to freehold title, transfer rights for Aboriginal and Torres Strait Islander land are quite restricted compared to those for ordinary freehold title. Data are reported on purchases by the Indigenous Land Corporation (ILC), Native Title decisions and ILUAs.

Nationally in 2016, Indigenous owned or controlled land comprised 16.1 per cent of the area of Australia (table 9A.2.1), with nearly all (98.0 per cent) in very remote areas (table 9A.2.2). These data measure the area of land held under different forms of title.⁵ However, land area is an imperfect indicator of the economic benefits that may be derived from land. Much of the Aboriginal and Torres Strait Islander owned or controlled land in Australia is of great cultural significance but low commercial value.

Indigenous Land Corporation purchases

The ILC purchases land for Aboriginal and Torres Strait Islander Australians that cannot be acquired via other means (for example, land that is not available for claim under native title). Between 1995 and 30 June 2015, the ILC acquired 251 properties (of which 189 have been divested), covering almost 6 billion hectares, in remote, rural and urban locations (ILC 2015 p.25) (see table 9A.2.12 for a map of the ILC's land acquisition activity). An Australian National Audit Office (ANAO) audit in 2013 found that whilst acquisition and divestment results were lower than the ILC targets, the ILC had managed to acquire a diverse range of properties, but noted that the timely and successful divestment of properties (to Indigenous organisations/corporations) was recognised by the ILC as a recurring issue (ANAO 2013).

Native title

In 1992, the High Court of Australia decided in the *Mabo* case that the common law of Australia would recognise native title.⁶ This decision led to the Commonwealth *Native Title Act 1993*, which provided a process for native title claims to be determined through the court system. The Federal Court or another individual or body can mediate a claim (Coombs 2012).

Native title provides Aboriginal and Torres Strait Islander Australians with communal rights and interests, with varying levels of control and management of lands and waters. Native title varies according to the rights and interests under the group's traditional laws and customs, and the extent to which a government has created or asserted rights that are inconsistent with any claimed native title right. Table 9A.2.9 illustrates the potential effect of existing broad land tenure on the existence of native title, and shows that, as at 30 June 2015, the majority of NSW, Victoria, Queensland and Tasmania have extinguished native title (meaning all native title rights are lost under Australian law).

Applications for determinations of native title commence as proceedings in the Federal Court and remain until they are resolved through determination, withdrawal, strike-out or

⁵ This includes land that is freehold (alienable and inalienable), leasehold, Crown, licenced, and Aboriginal Deed of Grant in Trust, as well as land for which tenure was not stated.

⁶ Native title is the recognition in Australian law that some Indigenous people continue to hold rights to their land and waters, which come from their traditional laws and customs (NNTT 2009).

dismissal. Of the 320 native title determinations made since 1994, 259 found that native title existed over the whole or part of the determination area, and 61 found that native title did not exist (NNTT unpublished)..⁷ As at 30 June 2015, 397 active applications were in the system.

Figure 9.2.1 Proportion of land within states and territories where native title is determined to exist, 2004 to 2015^{a, b}

^a At 30 June. ^b There have been no determinations of native title in Tasmania or the ACT.

Source: NNTT (unpublished); table 9A.2.3.

As at 30 June 2015, native title had been determined to exist in full or in part in 28.4 per cent of the total area of Australia (compared with 4.6 per cent in June 2004), with the largest proportions in SA (48.2 per cent) and WA (43.1 per cent) (figure 9.2.1). Tables 9A.2.7-8 show maps of determinations of native title by State and Territory and by remoteness.

Indigenous Land Use Agreements

Indigenous Land Use Agreements (ILUAs) provide an alternative mechanism for resolving native title issues, and may precede or follow a determination of native title, or might be negotiated in the place of such a determination. ILUAs are agreements about the use and management of land and waters, made between one or more native title groups and other

⁷ The 61 determinations where native title was determined not to exist include applications which were made by Aboriginal land councils in NSW in response to the requirements of the Land Rights Act 1983 (NSW). Of the 61 determinations that native title does not exist that were made up to 30 June 2015, 39 were in response to non-claimant applications made by land councils in NSW (NNTT unpublished).

parties such as mining companies. ILUAs are made possible by the *Native Title Act 1993*, and must be registered with the NNTT. Aboriginal and Torres Strait Islander Australians may negotiate agreements that lead to economic benefits, like employment and compensation, or to meet other aspirations in ways not possible under native title (NNTT 2010).

The proportion of land subject to ILUAs refers to the total area of a State or Territory covered by registered ILUAs as a proportion of the total area of the State or Territory. ILUAs can overlap (a place may be subject to multiple ILUAs) but the following figures do not include any double counting (data on the gross area of ILUAs are in table 9A.2.5).

As at 30 June 2015, 27.5 per cent of the total area of Australia was subject to ILUAs, with most of the land (79.8 per cent) in very remote areas (table 9A.2.6). The total number of ILUAs increased from 84 at 30 June 2003 to 998 at 30 June 2015 (table 9A.2.5), with almost two-thirds of all ILUAs (63.2 per cent) in Queensland (table 9A.2.5).

Tables 9A.2.10-11 contain maps showing the areas covered by registered ILUAs by State and Territory and by remoteness.

The potential economic benefits of land

The potential to derive economic benefits from activities on land may depend on: the location of the land, particularly in remote areas; the attributes of the land; the extent of ownership and control over the land (for example, communal or otherwise restricted land title may limit selling or leasing the land, or restrict land use); and the capacity and aspirations of the traditional owners.⁸

Altman and Dillon (2004) outline potential economic benefits that may accrue to Aboriginal and Torres Strait Islander Australians from rights to land including (many of these sources of benefit overlap):

- *Home ownership* — Private home and land ownership can provide economic benefits from living in, renting out, selling or borrowing against the property (see section 9.3 for more information on home ownership). Many Aboriginal and Torres Strait Islander Australians live in community housing built on communally owned land, where ‘inalienable’ communal title prevents land from being sold or mortgaged.⁹ While this ensures ongoing Indigenous ownership of land, it has created barriers to individuals

⁸ Some Indigenous owned or controlled land in Australia is inalienable freehold land (tenure information is not available for 80 per cent of Indigenous land) (table 9A.2.1). While inalienable title ensures that Indigenous land remains in the control of Indigenous people, it can restrict people's ability to develop land for uses such as housing and business. The New South Wales jurisdiction is unique, as under the *NSW Aboriginal Land Rights Act 1983*, Aboriginal Land Councils hold their land under alienable freehold title. This permits participation in commercial ventures (at the direction of their members and subject to the approval of the peak NSW Aboriginal Land Council) (AA 2014).

⁹ Except in SA, where Aboriginal Land Trust freehold land can be sold with the consent of both Houses of Parliament.

using land for housing or business, or as security for a loan (though the granting of 99 year leases in some jurisdictions, such as Queensland and SA, goes some way to addressing this issue).

- *Service delivery* — Communally owned land can be used to site and deliver services to Aboriginal and Torres Strait Islander communities, such as community housing, aged care and postal services, while income from land investments can enable the funding of services.
- *Customary and hybrid economy* — Aboriginal and Torres Strait Islander Australians can benefit from customary (non-monetary) activities associated with land such as food gathering or to create products for sale, and becoming part of a hybrid economy that intersects with the market economy (Altman 2009 cited in Russell 2011).
- *Tradeable assets* — Aboriginal and Torres Strait Islander Australians have negotiated land use agreements with governments and others (for example, mining companies and pastoralists). These agreements can yield benefits in the form of monetary payments; support for community services, facilities and infrastructure; employment and training programs; and protection of cultural sites.
- *Eco-services and land management* — Many programs recognise and employ Aboriginal and Torres Strait Islander Australians' land management skills, through joint management of conservation reserves, national parks and marine parks, for example, Indigenous Protected Areas (IPA) agreements between the traditional owners and the. As at May 2016 (Department of the Environment nd), there were 70 IPA agreements in place spanning 65 million hectares (up from 51 IPA agreements covering 35 million hectares in January 2014 (SCRGSP 2014)).
- *Commercial businesses* — Enterprise development on Indigenous owned or controlled land provides opportunities for economic development, whilst allowing Aboriginal and Torres Strait Islander Australians to maintain close connection to the land (Bawinanga Aboriginal Corporation 2007; Fordham, Fogarty and Fordham 2010).

Relieving impediments to realising economic benefits of Indigenous land

In May 2015, the Australian Human Rights Commission held an Indigenous Leaders Roundtable meeting on economic development and property rights. The aim was to identify options to address challenges to Aboriginal and Torres Strait Islander peoples creating economic development opportunities on Indigenous land. Participants called for dialogue on five sets of issues:

- *Fungibility and native title* — enabling communities to build on their underlying communal title to create opportunities for economic development.
- *Business development support and succession planning* — ensuring that Aboriginal and Torres Strait Islander Australians have the governance, risk management skills and capacity to successfully engage in business and manage their estates (see also the information later in this section on financial literacy).

-
- *Financing economic development* — developing financial products, such as bonds, to underwrite economic development through engaging the financial services sector and related Indigenous organisations.
 - *Compensation* — rectifying the existing unfair processes of compensation for extinguishment of native title and considering how addressing unfinished business could leverage economic development opportunities.
 - *Promoting Indigenous peoples' right to development* — promoting opportunities for development on Indigenous land including identifying options to provide greater access to resources (AHRC 2015).

At its December 2015 meeting, the Council of Australian Governments (COAG) considered the report *Investigation into Indigenous Land Administration and Use* (COAG 2015) (see appendix 1). The report identified five key areas where governments should focus their efforts (Senior Officers Working Group 2015).

- *Gaining efficiencies and improving effectiveness in the process of recognising rights* — The process of recognising rights and interests in land of Aboriginal and Torres Strait Islander Australians under the Native Title Act and statutory land rights regimes can be time consuming and expensive.
- *Supporting bankable interests in land* — As Indigenous land has mostly communal and inalienable title (meaning it cannot be sold or mortgaged), innovative mechanisms are required so that land can be used as collateral for a loan. The Investigation found that leasing could create bankable interests on statutory land, and recommended establishing a forum for Aboriginal and Torres Strait Islander stakeholders and the banking sector to better understand opportunities for private investment.
- *Improving the process for doing business on Indigenous land and land subject to native title* — Compliance with the processes under the Native Title Act and the various statutory land rights regimes can be time consuming and expensive, and a deterrent to investment. More efficient and accountable decision-making processes can facilitate greater investment and economic development opportunities.

One of the recommended actions for governments supporting this area was amending the Native Title Act to create choice in decision-making for native title holders and greater. At the same time the *Aboriginal Land Rights (Northern Territory) Amendments Act 2015* was amended to allow NT land councils to delegate certain functions and powers to Aboriginal corporations, and improved their capacity to take advantage of economic opportunities.

The report recommended streamlined approvals for developments, so that they are accessible for land and water use proposals by traditional owners.

- *Investing in the building blocks of land administration* — Remote Indigenous communities often have limited or no access to the basic building blocks of land administration such as complete cadastre surveys, town planning and zoning and essential services infrastructure. State and territory legislation such as environmental,

planning and heritage regulations, when applied to remote Aboriginal and Torres Strait Islander communities, can unreasonably restrict development opportunities.

- *Building capable and accountable land holding and representative bodies* — Much of the institutional infrastructure of land holding and representative bodies was developed to achieve successful claims for recognition of native title or Indigenous land. This infrastructure has not yet fully adapted to supporting the use of those rights as part of the mainstream economy (Australian Government 2015a).

Also launched in 2015, the White Paper on Developing Northern Australia included additional funding across various projects to support Aboriginal and Torres Strait Islander land owners and native title owners (Australian Government 2015b).

Financial literacy

Financial literacy is a combination of financial knowledge, skills, attitudes and behaviours necessary to make sound financial decisions, based on personal circumstances, to improve financial wellbeing (ASIC 2014). An individual's level of financial literacy will influence choices that influence the nature and extent to which they participate in the economy – including the extent to which financial security can be sustained, achieving home ownership, and even understanding the economic benefits of native title. Industry stakeholders told the Investigation into Indigenous Land Administration and Use that the capacity of Aboriginal and Torres Strait Islander Australians to engage in financial and business development opportunities was key to the quality of economic outcomes (Senior Officers Working Group 2015).

Things that work

A case study of a promising program that aims to enhance the economic benefits from Indigenous owned or controlled land is presented in box 9.2.3.

Box 9.2.3 **Things that work — Indigenous owned or controlled land**

Although the outcomes have not been formally evaluated, the Steering Committee has identified the Indigenous Landholder Services as a promising program worth further examination.

Indigenous Landholder Services (ILS) is a collaborative partnership in WA between the Department of Agriculture and Food WA (DAFWA) and the Indigenous Land Corporation (ILC). Established in 1996 in one remote community, ILS has expanded to include 70 properties spanning more than five million hectares across Western Australia from the Kimberley to the South Coast. ILS staff, including four Aboriginal and Torres Strait Islander employees, work with Aboriginal and Torres Strait Islander landholders to facilitate the long term viability of Indigenous held lands in terms of profitability, improved land management and sustainable employment outcomes.

The program focuses on:

- Extension services: planning and on-property agribusiness advice
- Training: targeted and tailored training packages directly related to the operations of individual landholdings and businesses, and
- Infrastructure development: funding allocated to improve the infrastructure on Indigenous landholdings.

In 2014-15 the ILS contributed to the following outcomes:

- 44 properties with improved land management practices
- 604 Aboriginal and Torres Strait Islander people participated in training on 31 properties
- 12 properties increased their annual income
- 5 infrastructure and planning projects were funded
- 42 business and property management plans were developed increasing the viability and profitability of Indigenous landholdings.

In 2011, the ILS won the nation's top award for Indigenous Economic Development from Economic Development Australia (Government of WA, 2011).

Given its lengthy history, a formal evaluation and cost benefit analysis would be worthwhile.

Self-employment and Indigenous owned business

Self-employment and participation in ownership of enterprises can allow individuals to improve overall levels of economic participation through increased financial capacity and independence.

Both the public and private sectors have a direct role in supporting Indigenous business, through programs, finance and other business support (Hunter 2013). Since 2009, the Business Council of Australia (BCA) has surveyed its member companies on their Indigenous engagement. In 2014, 51 of the 89 respondent companies (57.5 per cent) reported that they had knowingly used an Indigenous business in their supply chain (an increase from 45.7 per cent in 2009) (BCA 2015 p.4).

In 2014-15, 10.2 per cent of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years were self-employed — an increase from 5.8 per cent in 2011–13 (the proportion did not change significantly from 1994 to 2011–13). For non-Indigenous Australians, the proportion decreased from 19.2 per cent in 1994 to 10.5 per cent in 2011–13, before increasing to 15.4 per cent in 2014-15 (table 9A.2.13).

Census data (the most recent for 2011) are available for a broader scope of reporting (for remote and non-remote areas, and for people aged 15–64 years), and are available in tables 9A.2.13–15. These data show that self-employed people as a proportion of all employed people increases with age, with proportions greatest for those aged 55–64 years for both Aboriginal and Torres Strait Islander and non-Indigenous Australians (table 9A.2.15).

Things that work

Promising programs that support Indigenous owned or controlled businesses are presented in box 9.2.4.

Box 9.2.4 Things that work — Indigenous owned or controlled business

The Australian Government's **Indigenous Procurement Policy (IPP)** commenced on 1 July 2015, with the aim of stimulating Indigenous entrepreneurship and business development, and providing Aboriginal and Torres Strait Islander Australians with more opportunities to participate in the economy. The policy has three key components:

- a target number of contracts that need to be awarded by Australian Government departments to Indigenous businesses
- a mandatory set-aside for Indigenous businesses to apply in certain situations
- mandatory minimum requirements for Indigenous employment and Indigenous supplier use applying to certain high value government contracts (Australian Government 2016).

In the first 11 months, the Government awarded 1070 contracts with a total value of \$229 million to 284 Indigenous businesses. This compares to \$6.2 million in 2012-13. (Australian Government, unpublished.)

The Closing the Gap Clearinghouse has found the following practices have helped Indigenous businesses and community-based enterprises:

- government programs that assist Aboriginal and Torres Strait Islander people to access finance that has otherwise not been available through commercial avenues
- services that provide financial and business advice and ongoing support
- membership bodies (such as Supply Nation) that link Indigenous businesses into the supply chains of large companies and government agencies (AIHW 2014).

(continued next page)

Box 9.2.4 (continued)

Supply Nation (formerly Australian Indigenous Minority Supplier Council) was established to assist Indigenous businesses with Certified Supplier status to enter into commercial relationships with some of Australia's largest corporations and agencies who wish to purchase goods and services (IBA 2014).

Currently Supply Nation works with around 1030 registered Indigenous suppliers. The registration requirement is that the business be at least 50 per cent Indigenous owned. During the 2013-14 financial year \$44.4m was recorded in transactions and \$63.3m was recorded in contracts between Supply Nation Certified Suppliers and corporate and government members (Supply Nation 2015). There are a broad range of Supply Nation certified Indigenous businesses, covering industries including arts and crafts, transport, hospitality services, security services, employment services and cosmetics (AIHW 2014). A post-implementation review of the former Council indicated the concept was achieving significant success in the first two years of the pilot project which then led to Supply Nation being established (AIHW 2014; DEEWR 2011).

Future directions in data

The tenure type is recorded as 'not stated' in around 80 per cent of the ILC data on Indigenous owned or controlled land. As different tenure types have different governance arrangements and rules for how the land can be used, better information on tenure type is critical.

Self-employment data by Indigenous status in remote areas are not currently available from ABS surveys — largely due to the difficulty of obtaining a sufficient sample for reliable estimates. An alternative approach to collecting these data should be investigated.

The ABS has developed a statistical definition for an Aboriginal and Torres Strait Islander owned business (ABS 2012). However, there is currently no data collection.

The ANZ Survey of Adult Financial Literacy in Australia (ASIC 2016) is a potentially useful source of data on population-wide financial literacy levels in Australia, however the small sample of Aboriginal and Torres Strait Islander Australians currently limits the ability to reliably conclude whether significant gains in financial literacy are achieved in the population.

9.3 Home ownership¹⁰

Box 9.3.1 Key messages

- The proportion of Aboriginal and Torres Strait Islander adults who lived in a home owned, with or without a mortgage, by a member of their household increased from 21.5 per cent in 1994 to 27.4 per cent in 2002 and 29.1 per cent in 2014-15 (table 9A.3.3). Earlier data are not available, but the proportion for non-Indigenous Australians decreased from 73.7 per cent in 2002 to 69.0 per cent in 2014-15 (table 9A.3.4).
- In 2014-15, the proportion of Aboriginal and Torres Strait Islander Australians living in homes owned by someone in their household was 34.1 per cent in non-remote areas — around three times the proportion in remote areas (11.6 per cent) (table 9A.3.1).

Box 9.3.2 Measures of home ownership

There are two main measures for this indicator.

- *Living in a home owned with or without a mortgage* is defined as the proportion of people aged 18 years and over, living in homes someone in their household owned, with or without a mortgage. The main data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent data available for 2014-15 (NATSISS). Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/National Health Survey (NHS)/General Social Survey (GSS)), with data for 2014 (GSS). Supplementary data are also available from the Census of Population and Housing, with the most recent available data for 2011 (all jurisdictions; age, sex; remoteness). Survey and Census data are not directly comparable.
- *Proportion of Aboriginal and Torres Strait Islander households owning or purchasing a home* is defined as the number of Aboriginal and Torres Strait Islander households owning or purchasing a home as a proportion of the total number of Aboriginal and Torres Strait Islander households. An Aboriginal and Torres Strait Islander household is defined as a household where one or more occupants identify as being of Aboriginal and/or Torres Strait Islander origin. Data are sourced from the AATSIHS/NATSISS, with the most recent data available for 2014-15 (NATSISS) (all jurisdictions; location; tenure).

Supplementary data are also provided on the proportion of people living in public, community and private rental housing.

Home ownership is closely related to outcomes in other indicators in this report, particularly those concerning education, income and employment. Home ownership is an important indicator of wealth and saving, as owning a home provides a secure asset base against which people can borrow, contributes to financial stability and provides opportunity for wealth creation (Forrest 2014; Senior Officers Working Group 2015).

¹⁰ The Steering Committee notes its appreciation to Ms Heron Loban, Griffith University, who reviewed a draft of this section of the report.

Home ownership also provides security of tenure and allows control over living arrangements. Research highlights the perceived intergenerational benefits of home ownership for Aboriginal and Torres Strait Islander Australians (rather than economic benefits such as selling a house for profit) (FaHCSIA 2010; Memmott et al. 2009).

During consultations for previous editions of this report, many Aboriginal and Torres Strait Islander Australians said that home ownership was an important part of improving wellbeing and an essential indicator in the framework. Some Aboriginal and Torres Strait Islander Australians said that home ownership was important to them as a connection to the land, particularly in closely settled regions where native title has been extinguished and there are limited opportunities for land grants. Others suggested that not all Aboriginal and Torres Strait Islander Australians want to own their own homes; people who move frequently for family and cultural reasons may prefer to rent accommodation. For Aboriginal and Torres Strait Islander Australians in remote Australia, communal ownership may be preferred.

Research suggests that some Aboriginal and Torres Strait Islander Australians may face greater barriers to attaining home ownership than those faced by non-Indigenous Australians (Birdsall-Jones and Corunna 2008; FaHCSIA 2010; Szava and Moran 2008). Although affordability is a widespread issue in Australia, smaller markets and higher construction costs in remote areas are also problematic for home ownership (Crabtree et al. 2012; FaHCSIA 2013). The availability of appropriate, affordable and secure housing is covered in section 10.1, ‘Overcrowding in housing’.

The Australian National Audit Office (ANAO) found that barriers associated with home ownership for Aboriginal and Torres Strait Islander Australians included: higher unemployment rates; intergenerational welfare dependency; lower incomes and likely lack of savings; limited access to loans; and lack of information about financial planning (section 9.2 has more information on financial literacy). These factors were particularly prevalent amongst those living in remote and very remote areas (ANAO 2010). Additional barriers include access to initial capital, complexities of the lending process, and a shortage of affordable housing (FaHCSIA 2013).

Under Council of Australian Governments (COAG) agreements, governments have committed to Aboriginal and Torres Strait Islander Australians having the same housing opportunities as other Australians, and reducing Indigenous disadvantage by improving access to mainstream housing, including home ownership (COAG 2009).

A report prepared by FaHCSIA for the then Select Council on Housing and Homelessness (FaHCSIA 2013) divides Aboriginal and Torres Strait Islander home ownership into two categories: ‘established market’ and ‘on Aboriginal and Torres Strait Islander land’. Established markets generally offer higher appreciation in value and hence greater economic opportunities and wealth creation — but can be less affordable. Home ownership on Aboriginal and Torres Strait Islander land provides ongoing connection to the land, but land tenure arrangements can provide challenges in purchasing or acquiring a private interest on these lands. For example, where land is not freehold it cannot be sold and

cannot be mortgaged. This ensures its continuing ownership by Aboriginal and Torres Strait Islander Australians, but means that developments on the land need to be pursued through leasing and sub-leasing arrangements. Australia's legislative provisions for sub-leasing and private sector financing are different in every State and Territory. In addition, most communally owned Aboriginal and Torres Strait Islander land is located in remote and very remote areas with higher infrastructure, development, construction and maintenance costs, limited access to employment and services. Section 9.2 looks at Indigenous land use in more detail.

The Senior Officers Working Group report of the *Investigation into Indigenous Land Administration and Use* recommended amending the *Native Title Act 1993* (Commonwealth) to create choice in decision-making for native title holders and efficiencies in future act processes (Senior Officers Working Group 2015). The *Aboriginal and Torres Strait Islander Land (Providing Freehold) and Other Legislation Amendment Act 2014* (Qld) commenced operation on 1 January 2015. The Act enables some areas of land inside 34 Indigenous communities in Queensland to be divided up and converted to ordinary freehold (providing the opportunity for home ownership leases) (ILC 2015). Indigenous land ownership in other states and territories is determined by separate legislation in each jurisdiction. More information on Indigenous land tenure is included in section 9.2.

Living in a home owned by a member of the household

The proportion of Aboriginal and Torres Strait Islander adults living in a home owned, with or without a mortgage, by a member of their household increased from 21.5 per cent in 1994 to 27.4 per cent in 2002, and 29.1 per cent in 2014-15. The proportion of Aboriginal and Torres Strait Islander adults living in homes owned with a mortgage increased from 10.6 per cent in 1994 to 19.4 per cent in 2014-15, while the proportion living in homes owned outright in 2014-15 was 9.6 per cent – a level similar in 1994 (table 9A.3.3).

Earlier data are not available, but the proportion of non-Indigenous Australians living in a home owned, with or without a mortgage, by a member of their household decreased from 73.7 per cent in 2002 to 69.0 per cent in 2014-15 (table 9A.3.4).

In 2014-15, a lower proportion of Aboriginal and Torres Strait Islander adults (29.1 per cent) than non-Indigenous adults (68.6 per cent) lived in a home owned, with or without a mortgage, by a member of their household (figure 9.3.1). For Aboriginal and Torres Strait Islander Australians, the proportion was higher in major cities (34.7 per cent), inner regional (36.4 per cent) and outer regional (31.4 per cent) areas, than in remote (19.1 per cent) or very remote (7.7 per cent) areas. The proportions for non-Indigenous Australians were not significantly different across remoteness areas (figure 9.3.1).

Figure 9.3.1 **Proportion of people aged 18 years and over living in homes owned with or without a mortgage, by remoteness, 2014–15^{a, b, c, d}**

^a Data for Aboriginal and Torres Strait Islander Australians are from the 2014-15 NATSISS. Data for non-Indigenous Australians are from the 2014 GSS. ^b Data are not available for non-Indigenous people in very remote areas from the 2014 GSS. ^c Comprises participants in rent/buy schemes and those living in a household in which payments were being made on mortgages or secured loans towards the purchase of the dwelling. ^d Error bars represent 95 per cent confidence intervals around each estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2014-15; ABS (unpublished) General Social Survey, 2014; tables 9A.3.1-2.

Tables 9A.3.5–8 contain additional data from the 2011 Census on Aboriginal and Torres Strait Islander and non-Indigenous Australians living in a home owned by a member of the household, by State and Territory, remoteness (including very remote areas for non-Indigenous Australians), age and sex.

Households owning or purchasing a home

The proportion of Aboriginal and Torres Strait Islander *households* owning or purchasing a home (as opposed to the proportion of *people*) is an indicator in the National Affordable Housing Agreement (NAHA).

In 2014-15, 30.3 per cent of Aboriginal and Torres Strait Islander households owned or were purchasing a home, similar to the proportion in 2012-13 and 2008 (31.7 per cent and 32.5 per cent respectively). The proportion in 2014-15 was similar in capital cities (32.2 per cent) to all other areas combined (29.2 per cent) (tables 9A.3.9–11). A higher proportion of households owned or were purchasing a home with a mortgage (20.0 per cent) than without a mortgage (10.2 per cent) (table 9A.3.14).

Rental housing

Data from the 2011 Census indicate that, nationally, around one-third (33.1 per cent) of Aboriginal and Torres Strait Islander households were renting privately (compared with 24.7 per cent of non-Indigenous households). A further 21.5 per cent of Aboriginal and Torres Strait Islander households were living in housing provided by a State/Territory housing authority (compared with 3.6 per cent of non-Indigenous households) and 4.7 per cent of Aboriginal and Torres Strait Islander households were living in housing provided by an Indigenous/community housing organisation/church group (compared to 0.5 per cent of non-Indigenous households) (AIHW 2013, p. 93). More information on social housing provided to Aboriginal and Torres Strait Islander people is included in the annual Report on Government Services (SCRGSP 2016).

Historically, in remote areas, a high proportion of houses are located on communally held Aboriginal and Torres Strait Islander owned land, and managed by community housing providers that rent houses to families and individuals. In some regions, this arrangement led to a lack of clear responsibility for the maintenance of the asset itself, which in turn contributed to a reduced occupancy span from an expected 30 years to around seven years. Through the National Partnership Agreement on Remote Indigenous Housing, governments are securing tenure over remote community-titled land with long-term leases and introducing standardised public housing-like arrangements (Australian Government 2013; Habibis, Phillips and Verdouw 2013).

Things that work

The Steering Committee was not able to identify any evaluations of programs that worked to improve home ownership for Aboriginal and Torres Strait Islander people.

9.4 Income support¹¹

Box 9.4.1 Key messages

- From 2002 to 2014-15, there was a significant increase in the proportion of Aboriginal and Torres Strait Islander Australians whose main source of personal cash income was employee income (from 32.2 per cent to 43.0 per cent, with a particular increase in remote areas), and a corresponding decrease in CDEP/other cash income (from 14.9 per cent to 3.0 per cent – incorporating the phasing of out of CDEP in 2013) (figure 9.4.1). Proportions for those whose main source of personal cash income was government pensions and allowances were similar in 2002 (49.5 per cent) and 2014-15 (46.9 per cent) (figure 9.4.1).
- From 2002 to 2014-15, the proportion of non-Indigenous Australians whose main source of income was employee income fluctuated with no clear trend (61.1 per cent in 2014-15), while the proportion for government pensions/allowances decreased (from 19.6 per cent to 13.8 per cent). However, from 2004-05, there was a large increase in 'not stated' responses in the survey collection (figure 9.4.1).
- From 2003 to 2015, there was a decrease in the proportion of Aboriginal and Torres Strait Islander Australians aged 15–64 years on Parenting Payment Single (from 9.3 per cent to 7.6 per cent) and an increase in Newstart Allowance (from 10.0 per cent to 15.5 per cent). From 2003 to 2011 the proportion receiving Disability Support Pension almost doubled (from 5.5 per cent to 10.4 per cent), but remained stable since (10.5 per cent in 2015) (figure 9.4.4).

Box 9.4.2 Measures of income support

There are two main measures for this indicator.

- *Personal cash income* is defined as the proportion of people aged 18–64 years by main source of personal cash income. The main data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS) with the most recent data available for 2014-15 (all jurisdictions; remoteness). Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/National Health Survey (NHS)/General Social Survey (GSS), with the most recent data for 2014 from the GSS. Indicators using both AATSIHS (2012-13) and AHS (2011-12) are referenced as 2011–13.
- *People receiving income support payments* is defined as the proportion of people aged 15–64 years receiving income support payments by payment type. The main data source is Centrelink administrative data with the most recent data available for 2015 (all jurisdictions; sex; remoteness).

Results from the survey and administrative data are not directly comparable.

¹¹ The Steering Committee notes its appreciation to Ms Heron Loban, Griffith University, who reviewed a draft of this section of the report.

Reliance on income support for those of the working age population is a key indicator of social and economic wellbeing. Historically, Aboriginal and Torres Strait Islander Australians have been over-represented in the Australian income support system. A range of adverse socioeconomic conditions contribute to this high dependence on income support, including poor health, lack of employment opportunities in some local labour markets and lower levels of educational attainment (DEEWR 2009). The relatively lower levels of financial literacy of economically disadvantaged Australians makes it more difficult for those individuals to achieve financial security (ASIC 2014) (financial literacy is discussed briefly at the beginning of chapter 9 and in section 9.2).

Low income (often in the form of income support) is associated with a wide range of disadvantages including poor health, shorter life expectancy, poor education, substance abuse, reduced social participation, crime and violence (AHMAC 2015). Welfare dependence was cited by the Cape York Institute (CYI) as contributing to social breakdown in Cape York (FaHCSIA 2012).

Income support is available to all eligible Australians to ensure that they have adequate levels of income to support themselves and their dependents. Income support accounts for the largest component of welfare provided by the Australian Government, with over five million direct beneficiaries at any one time (DSS 2015b). Income support payments are paid by Centrelink to the aged, people with disability, carers, youth and students, families with children, the unemployed, and widows.

A relatively high proportion of Aboriginal and Torres Strait Islander Australians receive income support. The longest running Indigenous-specific government program was the Community Development Employment Projects (CDEP), which until 30 June 2009 allowed some Aboriginal and Torres Strait Islander people to receive CDEP wages in the place of unemployment benefits. From 1 July 2009, new CDEP participants received income support payments (such as Newstart) rather than wages, which caused a shift in the recorded source of income for some Aboriginal and Torres Strait Islander participants. From 1 July 2013, remote CDEP was rolled into the Australian Government's Remote Jobs and Communities Program (RJCP). The Community Development Program (CDP) replaced the RJCP on 1 July 2015 (more information on CDEP is provided in section 4.7).

Aboriginal and Torres Strait Islander welfare reform initiatives include income management, under which part of a person's income support and family assistance payments are directed towards priority items such as food, housing, education, clothing, health care and utilities (Buckmaster and Ey 2012). As part of the 2015-16 Federal Budget, the Australian Government announced that income management would continue across all existing sites until 30 June 2017 (DSS 2015a).

Income management was introduced into several Northern Territory Aboriginal communities in 2007 as part of the Northern Territory Emergency Response (NTER). It has since been introduced in varying forms (both voluntary and involuntary) in other locations:

- 2008—four Aboriginal communities in Cape York as part of the Cape York Welfare Reform trial
- 2008—selected communities in WA as part of a child protection initiative (Income management in WA)
- 2010—extended across the entire NT as part of New Income Management. The Australian Government made changes to income management to make it compatible with the Racial Discrimination Act
- 2012—extended to five communities around Australia under a new Place Based Income Management model
- 2012-2013—introduced into the APY Lands in South Australia and then Laverton and the Ngaanyatjarra Lands (including Kiwirrkurra) in Western Australia
- 2014—introduced into the Ceduna region in South Australia
- 2016—introduced into the far north Queensland community of Doomadgee (Australian Government 2016; DSS 2016).

While income management is available for non-Indigenous Australians, it is largely provided to Aboriginal and Torres Strait Islander Australians (nationally, 79 per cent are Aboriginal and Torres Strait Islander Australians). As at 25 March 2016 there were 26 508 income support recipients on income management across all locations with 80 per cent (21 190) of participants in the NT (Australian Government 2016).

Buckmeister and Ey (2012) found there were substantial difficulties in evaluating the effectiveness of income management, that there had been few studies evaluating its effectiveness and that it was difficult to separate the effects of income management from other factors and policy interventions. Bray et al. (2014) evaluated income management in the NT and concluded that while income management may benefit some individuals there was little evidence that it had achieved the intended outcomes of promoting independence and building skills, changing long-term behaviour or had impacts at the community level. Additional data and further evaluation and research are needed to determine the benefits of income management both generally and in its various forms (also Australian Government 2015).

Personal cash income

In 2014-15, government pensions and allowances (46.9 per cent) were the main source of personal cash income for Aboriginal and Torres Strait Islander Australians aged 18–64 years, followed by employee income (43.0 per cent) (figure 9.4.1).

Figure 9.4.1 Main sources of personal cash income, people aged 18–64 years, 2002 to 2014–15^{a,b,c}

^a In 2012-13, CDEP was only able to be separately identified for Aboriginal and Torres Strait Islander Australians in remote and very remote areas. Therefore, for comparability CDEP is presented in this figure combined with other cash income. ^b CDEP was discontinued in 2013. ^c Relative standard errors and 95 per cent confidence intervals should be considered when interpreting these data, and are available in attachment table 9A.4.1.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey (NATSISS) 2002; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) NATSISS 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); ABS (unpublished) General Social Survey (GSS) 2002; ABS (unpublished) National Health Survey 2004-05 and 2007-08; ABS (unpublished) Australian Health Survey 2011-13 (2011-12 NHS component); ABS (unpublished) NATSISS 2014-15; ABS (unpublished) GSS 2014; table 9A.4.1.

From 2002 to 2014-15, there was a significant increase in the proportion of Aboriginal and Torres Strait Islander Australians whose main source of personal cash income was employee income (from 32.2 per cent to 43.0 per cent), and a decrease in CDEP/other cash income (from 14.9 per cent to 3.0 per cent). The proportions of those whose main source of personal cash income was government pensions and allowances were similar in 2002 (49.5 per cent) and 2014-15 (46.9 per cent) (figure 9.4.1).

In 2014-15, employee cash income was the main source of personal income for non-Indigenous Australians (61.1 per cent). From 2002 to 2014-15, this proportion fluctuated with no clear trend, while the proportion for government pensions/allowances decreased (from 19.6 per cent to 13.8 per cent). However, from 2004-05, there was a large increase in 'not stated' responses for income source in the survey collections (figure 9.4.1).

Figure 9.4.2 **Main source of personal cash income for Aboriginal and Torres Strait Islander Australians aged 18–64 years in remote/very remote areas, 2002 to 2014-15^{a,b,c,d}**

^a Error bars represent 95 per cent confidence intervals around each estimate. ^b Remote areas include 'remote' and 'very remote'. ^c In 2012-13, CDEP was only able to be separately identified in remote and very remote areas. ^d In 2014-15, the number of CDEP participants receiving 'wages' was zero.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey (NATSISS) 2002; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) NATSISS 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); ABS (unpublished) NATSISS 2014-15; table 9A.4.3.

The majority of the change in main income source from 2002 to 2014-15 reflects an increased proportion of Aboriginal and Torres Strait Islander Australians in remote and very remote areas with employee income (from 20.5 per cent to 36.0 per cent), and a similar increase in the proportion receiving government pensions and allowances (from 42.2 per cent to 55.5 per cent). Data reported from 2012-13 onwards will be affected by the phasing out of CDEP (figure 9.4.2).

Data on main sources of personal cash income for people aged 18–64 years are also reported by State and Territory (tables 9A.4.1–2) and by remoteness (table 9A.4.3). Data on people aged 18–64 years receiving government cash pensions and allowances are also reported by sex and State and Territory (table 9A.4.4), sex by remoteness (table 9A.4.5) and by sex by age group (table 9A.4.6). Data on sources of cash income for Aboriginal and Torres Strait Islander *households* for 2004-05 and 2012-13 are in tables 9A.4.7–9.

People receiving income support payments — administrative data

The following figures use Centrelink administrative data to calculate the proportion of Aboriginal and Torres Strait Islander and non-Indigenous Australians aged 15–64 years receiving various types of income support payments. As individuals can receive multiple payment types, these data cannot be aggregated.

Figure 9.4.3 **People aged 15–64 years receiving income support payments by selected payment types, 2015^{a,b,c}**

^a Identification of Indigenous status in Centrelink data is voluntary. People whose Indigenous status is unknown are included in the counts for non-Indigenous people. ^b Non-Indigenous people are not eligible to receive Abstudly. ^c All data are point in time data. Depending on the particular payment type, data are reported at various points in time across June.

Sources: Centrelink (unpublished); ABS 2015, *Australian Demographic Statistics, June 2015* Cat. no. 3101.0; ABS 2014, *Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001–2026*, Cat. no. 3238.0; table 9A.4.10.

In 2015, a higher proportion of Aboriginal and Torres Strait Islander Australians than non-Indigenous Australians received each of the selected income support payment types. Newstart Allowance was the most common income support payment received by Aboriginal and Torres Strait Islander Australians (15.5 per cent) followed by Disability Support Pension (10.5 per cent) and Parenting Payment Single (7.6 per cent). Disability Support Pension was the most common income support payment received by non-Indigenous Australians (4.7 per cent) followed by Newstart Allowance (4.4 per cent) (figure 9.4.3).

Figure 9.4.4 **People aged 15–64 years receiving income support payments, by selected payment type, 2003 to 2015^{a,b}**

^a Identification of Indigenous status in Centrelink data is voluntary. People whose Indigenous status is unknown are included in the counts for non-Indigenous people ^b All data are point in time data. Depending on the particular payment type, data are reported at various points in time across June.

Sources: Centrelink (unpublished); ABS (2012) *Australian Demographic Statistics, June 2012*, Cat. no. 3101.0; ABS 2013, *Australian Demographic Statistics, June 2013*, Cat. no. 3101.0; ABS (2014) *Australian Demographic Statistics, June 2014*, Cat. no. 3101.0; ABS (2015) *Australian Demographic Statistics, June 2015*, Cat. no. 3101.0; ABS 2014, *Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001–2026*, Cat. no. 3238.0; table 9A.4.10.

From 2003 to 2015:

- the proportion of people on Parenting Payment Single decreased for both Aboriginal and Torres Strait Islander and non-Indigenous Australians (both by around 1.7 percentage points)
- the proportion of people on the Disability Support Pension and Newstart Allowance increased for Aboriginal and Torres Strait Islander Australians (though the increase in Disability Support Pension tapered off around 2011), but showed no clear trend for non-Indigenous Australians (figure 9.4.4).

Data are also available by State and Territory (tables 9A.4.11–12), by sex (table 9A.4.10) and by remoteness (tables 9A.4.13–14).

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Non-Indigenous data for very remote areas are not available (they were not collected in surveys).

(c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) The sample size in the NT was considered too small to produce reliable estimates for the NT in the National Health Survey 2004-05, but NT records in the survey have been attributed appropriately to national estimates.

na Not available.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which is cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which is cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which is cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

---	--	---	---------------------	----------------------	-------------------------	--	---------------------------------------	--

- (a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.
- (b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (c) The 2006 ANZSIC has different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government Administration and Defence' = Public Administration and Safety; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.
- (d) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.
- (e) Excludes people in employment who did not adequately describe the industry of their employment.

np Not published. – Nil or rounded to zero.

---	--	---	---------------------	----------------------	-------------------------	--	---------------------------------------	--

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) The 2006 ANZSIC has different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government Administration and Defence' = Public Administration and Safety; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.

(d) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(e) Excludes people in employment who did not adequately describe the industry of their employment.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

Table 9A.1.20 Employed non-Indigenous people aged 18–64 years, by 2006 ANZSIC classification of industry, by State and Territory, by sex, by remoteness (non-remote areas), by age group, 2011-12 (a), (b) (Survey data)

<i>Public adminis- tration and safety</i>	<i>Health care and social assistance</i>	<i>Administrative and support services and other services</i>	<i>Construction</i>	<i>Manufacturing</i>	<i>Retail trade</i>	<i>Rental, hiring and real estate services</i>	<i>Education and training</i>	<i>Other industries (c), (d)</i>
---	--	---	---------------------	----------------------	-------------------------	--	---------------------------------------	--

(b) The 2006 ANZSIC has different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government Administration and Defence' = Public Administration and Safety; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.

(c) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(d) Excludes people in employment who did not adequately describe the industry of their employment.

- (a) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use.
- (b) The 2006 ANZSIC had different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government administration and defence' = Public administration and defence; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.
- (c) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(a) Areas are normally based on the geographic extent of the Indigenous Land Use Agreement (ILUA) area, however, where specific exclusions are indicated, these are normally mapped and not included in the area calculation. As more than one ILUA can cover the same area (this is specifically relevant where body corporate agreements are developed) the total area of land covered has also been calculated.

(b) Areas calculated using Australian Albers projection (EPSG 3577).

(c) Areas include islands adjacent to the mainland — figures sourced from Geoscience Australia (1993).

na Not available. .. Not applicable. – Nil or rounded to zero.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

Table 9A.2.14 Self-employment, people aged 15-64 years, by State and Territory, by remoteness area, 2001, 2006 and 2011 (Census data) (a), (b)

	Unit	NSW	Vic	Qld	WA	SA	Tas	ACT	NT	Aust. (c)
--	------	-----	-----	-----	----	----	-----	-----	----	-----------

(b) Geography is based on boundaries in existence at the time of each Census.

(c) Australia total includes Other Territories.

(d) Self Employed refers to the following: for 2001, comprises persons with a Labour Force Status of "Employer" or "Own Account Worker"; for 2006 and 2011, comprises persons with an Employment Type of "Owner managers or incorporated enterprises" or "Owner managers of unincorporated enterprises".

(e) Includes 'Aboriginal', 'Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

(f) Total for Australia also includes Migratory/Offshore and No Usual Address. For 2001 also includes inadequately described/not stated.

(g) Total includes persons who did not state their Indigenous Status.

– Nil or rounded to zero.

Source: ABS (unpublished) derived from the 2001 Census of Population and Housing, 2006 Census of Population and Housing and the 2011 Census of Population and Housing.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Includes persons in a shared equity scheme and those living in a household in which a mortgage is outstanding.

(d) Includes people aged 18 years and over who did not state the tenure type of the home they were living in that someone else in the household owned.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Non-Indigenous data for remote and very remote areas of Australia are not available from the 2002 General Social Survey. Non-Indigenous data for very remote areas of Australia are not available from the 2007-08 National Health Survey; the 2011-13 Australian Health Survey or the 2014 General Social Survey.

(d) Includes persons in a shared equity scheme and those living in a household in which a mortgage is outstanding.

(e) Includes people aged 18 years and over who did not state the tenure type of the home they were living in that someone else in the household owned.

na not available.

(a) Australia total includes Other Territories.

(b) Includes 'Aboriginal', Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

(c) Total for Australia also includes Migratory/Offshore and No Usual Address. For 2001 also includes inadequately described/not stated.

(d) Includes being purchased under a rent/buy scheme.

(e) Total includes all other tenure types, including where the tenure was not stated.

(f) Owned Outright/Owned with a Mortgage as a proportion of all tenure types.

– Nil or rounded to zero. .. Not applicable.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) CDEP as a principal source of income was not collected in Victoria or ACT.

(c) Proportions are calculated using unrounded estimates and in some cases will not match the proportion derived using the rounded numbers (to the nearest hundred) provided in the table.

(d) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(e) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(f) For 2012-13 NATSIHS, Other cash income includes: Owners of unincorporated businesses, participants in CDEP programs, and any other source of regular income. For 2014 non-indigenous data, other cash income includes: profit or loss from own unincorporated business, profit or loss from rental property, dividends or interest, child Support or maintenance, superannuation or annuity, workers' compensation and any other source of regular income.

(g) Includes persons whose main source of cash income was not defined, not stated or not known, and those who had no source of income.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Victoria and ACT do not have a Remote or Very Remote classification.

(d) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(e) Other cash income includes unincorporated business cash income and any other principal source of personal income

(f) Includes persons whose main source of cash income was not stated or not known, and those who had no source of income.

– Nil or rounded to zero. .. Not applicable. **np** Not published.

- (a) Estimates with a relative standard error (RES) of between 25 and 50 per cent should be used with caution. Estimates with a relative standard error over 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.
- (b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (c) Non-Indigenous data for very remote areas of Australia are not available.
- (d) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.
- (e) The National Aboriginal and Torres Strait Islander Health Survey does not provide data for this indicator for non-remote areas in Australia.
- (f) For the Aboriginal and Torres Strait Islander population, income includes unincorporated business income, property (rental income) and other regular sources.
- (g) For the non-Indigenous population, survey data includes profit or loss from own unincorporated business, profit or loss from rental property, dividends or interest, child support or maintenance, superannuation or annuity, worker's compensation and other regular source.
- (h) Includes persons whose main source of cash income was not defined, not stated or not known, and those who had no source of income.
- (i) For the Indigenous population, includes unincorporated business, property, other pension, and other regular sources.
- .. Not applicable. **na** Not available.

(a) Estimates with a relative standard error (RES) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data, and discrepancies may occur between sums of the component items and totals.

(b) The number and proportion of people in receipt of income support, according to their Indigenous status, sex and State/Territory.

(c) Non-Indigenous survey data for very remote areas of Australia are not available.

(d) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

.. Not applicable.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data, and discrepancies may occur between sums of the component items and totals.

(b) The number and proportion of people in receipt of income support, according to their Indigenous status, sex, and remoteness area.

(c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(d) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data, and discrepancies may occur between sums of the component items and totals.

(b) The number and proportion of people in receipt of income support, according to their Indigenous status, sex and age group.

(c) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

.. Not applicable.

- (a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate.
- (b) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).
- (c) In 2012-13, this indicator is only available for Remote areas in Australia. Refer to Table 9A.4.9.
- (d) Includes unincorporated business cash income, CDEP and any other regular income source for household.
- (e) Includes source of cash income not stated or not known.
- (f) Sum of components may be greater than total as households may have reported more than one source of income.
- Nil or rounded to zero. .. Not applicable. **np** Not published.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval is also reported against each estimate.

(b) The 2012-13 National Aboriginal and Torres Strait Islander Health Survey does not provide data for CDEP participation for non-remote areas in Australia.

(c) Other cash income includes unincorporated business cash income, CDEP, and any other regular source of income for the household.

(d) Includes source of cash income not stated or not known.

(e) Sum of components may be greater than total as households may have reported more than one source of income.

– Nil or rounded to zero. .. Not applicable. **np** Not published.

(a) Recipients for whom Indigenous status was unknown have been reported where data is available. For all other payments, recipients of unknown status are included as non-Indigenous.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June in the relevant year.

(c) Proportions are of the Aboriginal and Torres Strait Islander/non-Indigenous/total male, female or persons population aged 15-64 years.

(d) Metadata for the data presented in this table are provided at table 9A.4.15.

(e) Recipients of age pension, disability support pension, wife pension (age), wife pension (DSP), carer payment and special benefit payments whose Indigenous status was unknown are not included in 2010 and 2011. In 2009 and prior to 2009, the non-Indigenous category includes recipients whose Indigenous status was unknown.

(f) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as Aboriginal and Torres Strait Islander Australians. These data may therefore represent an undercount. Source: Department of Human Services administrative data (Blue Book dataset).

– Nil or rounded to zero. **na** Not available. **..** Not applicable. **np** Not published.

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June and July in the relevant year.

(c) Metadata for the data presented in this table are provided at table 9A.4.15.

(d) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as Aboriginal and Torres Strait Islander Australian. These data may therefore represent an undercount. Source: Department of Human Services administrative data (Blue Book dataset).

– Nil or rounded to zero. **na** Not available. **..** Not applicable. **np** Not published.

Source: Centrelink (unpublished) administrative data.

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June and July in the relevant year.

(c) The Australian total includes population where State/Territory was unknown and where an individual resides internationally.

(d) Proportions are of the Aboriginal and Torres Strait Islander/non-Indigenous/total male, female or persons population aged 15-64 years.

(e) Metadata for the data presented in this table are provided at table 9A.4.15.

(f) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as Aboriginal and Torres Strait Islander Australian. These data may therefore represent an undercount. Source: Department of Human Services administrative data (Blue Book dataset).

– Nil or rounded to zero. **na** Not available. **..** Not applicable. **np** Not published.

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June and July in the relevant year.

(c) Metadata for the data presented in this table are provided at table 9A.4.15.

Table 9A.4.13 **Aboriginal and Torres Strait Islander Australians aged 15–64 years receiving income support payments, by remoteness, 2003 to 2015 (number) (a), (b), (c), (d)**

<i>Unit</i>	<i>2003</i>	<i>2004</i>	<i>2005</i>	<i>2006</i>	<i>2007</i>	<i>2008</i>	<i>2009</i>	<i>2010</i>	<i>2011</i>	<i>2012</i>	<i>2013</i>	<i>2014</i>	<i>2015</i>
(d) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as Aboriginal and Torres Strait Islander Australian. These data may therefore represent an undercount. Table 9A.4.15 Metadata for Centrelink income support payments

Confidentiality Provision	All cells that have a value of less than 20, including zero, have been changed to display not published (np). This rule has been employed for privacy reasons. Where the total fields are included these will only have a value when it does not make it possible to work out the value of any "<20" fields. Not published (np) will be inserted in cells when it may be possible to estimate customer numbers. This will prevent information from being broken down or manipulated to the degree that individuals may be identified, and to cover the legal requirement to protect an individuals privacy.
Point in Time	All data is point in time data. Depending on the particular payment type, data are reported at various points in time across June and July of the particular year.
Data Source	The source of the data can be found by the following example below: Centrelink Populations 2003 Qtr 3 (05-09-03) Ver-01 Table 1 Postcode by Language of Birth for Customers
Age Pension	Age Pension is a support payment for people who have reached the qualifying age. From 1 July 2013, the qualifying age for both men and women is 65 years. From 1 July 2017 the Age Pension qualifying age will progressively increase from 65 years to 67 years, reaching 67 years in 2023. This affects both men and women born on or after 1 July 1952.
Austudy	Income support payment for customers aged 25 years or more and studying or undertaking an Australian Apprenticeship full-time. Customers must be aged 25 or over to qualify.
Carer Payment	Is an income support payment for people who are unable to support themselves through participation in the workforce while caring for someone with a disability, severe medical condition or who is frail aged.
Disability Support Pension	Is an income support payment for customers who have a physical, intellectual or psychiatric impairment that prevents them from working. Customers must be aged 16 or over to qualify.
Newstart Allowance	Is an income support payment for customers who are looking for work and allows them to participate in activities designed to increase their chances of finding work. Customers must be aged 22 to 64 to qualify.
Newstart Mature Age Allowance	From 20 October 2003 Newstart Mature Age Allowance was closed to new claimants. The payment ceased in October 2008.
Parenting Payment	Is an income support payment for customers who are primary carers of young children.
Partner Allowance	Is an income support payment is for customers who face barriers to finding work because they have had limited participation in the workforce and their partner is getting income support. Partner allowance was closed to new claimants on 20 October 2003.
Sickness Allowance	Is an income support payment for customers who are employed and who are temporarily unable to work due to a medical condition. Customers must be aged 21 to 64 years to qualify.

Table 9A.4.15 Metadata for Centrelink income support payments

Special Benefit	Is an income support payment for customers who are in severe financial need due to circumstances beyond their control.
Widow Allowance	Income support payment for women who were born on or before 1 July 1955 and have become widowed, divorced or separated later in life and have no recent workforce experience.
Widow B Pension	Income support payment to ensure customers have an adequate level of income if they are an older widow who does not qualify for parenting payment, have limited means, and have lost the financial support of their partner. There have been no new grants of Widow B pension since 20 March 1997.
Wife Pension	Income support payment for the female partner of a Disability Support Pensioner or Age Pensioner. There have been no new grants of Wife Pension since 1 July 1995.
Youth Allowance	Is an income support payment for young people who are studying, undertaking training or an Australian Apprenticeship, looking for work or sick. Customers must be aged 15 to 24 to qualify.
Indigenous status	<p><u>Indigenous:</u> Customer Identified as being Indigenous Australian. This includes if the customer has identified himself or herself as being of Aboriginal, Torres Strait Islander or South Sea Islander origin. Please note that Centrelink officially defines Indigenous Australians as being of Aboriginal and/or Torres Strait Islander descent. Includes the following categories: Aboriginal; Aboriginal & Torres Strait & South Sea Islander; Aboriginal & South Sea Islander; Both Aboriginal & Torres Strait Islander; Torres Strait Islander; Torres Strait Islander & South Sea Islander.</p> <p><u>Non-Indigenous:</u> Customer not Identified as being Indigenous Australian. Please note that it is optional for customers to identify as Indigenous so this limitation should be considered in any application or use of this information. This data may represent an undercount. Includes the following categories: not Aboriginal/Torres Strait but is South Sea Islander; not Aboriginal/Torres Strait/South Sea Islander; South Sea Islander; does not wish to declare if they are or are not Indigenous.</p>

10 Home environment

Strategic areas for action

Environmental health relates to physical, chemical and biological factors external to a person which potentially affects a person's health, and better environmental health can have positive outcomes for Aboriginal and Torres Strait Islander Australians, and is especially beneficial for children's physical and emotional wellbeing.

The following indicators included in this chapter cover some factors that contribute to a healthy home environment and good environmental health for Aboriginal and Torres Strait Islander Australians:

- Overcrowding in housing (section 10.1) — reducing overcrowding is associated with positive effects on health, family relationships and children's education
- Rates of disease associated with poor environmental health outcomes (section 10.2) — improvements in environmental health can help reduce the spread of diseases that are linked to environmental causes
- Access to clean water and functional sewerage and electricity services (section 10.3) — clean water and functional sewerage and electricity services, and housing of an acceptable standard, encourage and support healthy living practices.

The home environment affects other COAG targets and headline indicators:

- life expectancy (section 4.1)
- young child mortality (section 4.2)
- disability and chronic disease (section 4.9)
- family and community violence (section 4.12).

Other COAG targets and headline indicators can directly influence the home environment:

-
- employment (section 4.7)
 - household and individual income (section 4.10).

Outcomes in the home environment area can be affected by outcomes in several other strategic areas for action, or can influence outcomes in other areas:

- early child development (chapter 6)
- education and training (chapter 7)
- healthy lives (chapter 8)
- economic participation (chapter 9).

Attachment tables for this chapter are identified in references throughout this chapter by an 'A' suffix (for example, table 10A.1.1). These tables can be found on the web page (www.pc.gov.au/oid2016).

10.1 Overcrowding in housing¹

Box 10.1.1 Key messages

- Less cramped living conditions has been linked to positive health, education and family outcomes for Aboriginal and Torres Strait Islander Australians.
- Nationally, the proportion of Aboriginal and Torres Strait Islander Australians living in overcrowded households decreased from 27.0 per cent in 2004-05 to 20.6 per cent in 2014-15 (figure 10.1.1), including a decrease in overcrowding in very remote areas (from 63.4 per cent to 49.4 per cent) (table 10A.1.2).
- The proportion of Aboriginal and Torres Strait Islander adults reporting overcrowding as a stressor decreased by more than two-thirds, from 20.8 per cent in 2002 to 6.5 per cent in 2014-15. The largest decrease over this period was in very remote areas (from 50.2 per cent to 9.8 per cent) (figure 10.1.3).

Box 10.1.2 Measures of overcrowding in housing

There is one main measure for this indicator. *Overcrowding in housing* is defined as the proportion of Aboriginal and Torres Strait Islander people, of all ages, who live in overcrowded houses. Supplementary data are provided for Aboriginal and Torres Strait Islander people aged 15 years and over (for comparable time series back to 2002).

Overcrowding is calculated according to the Canadian National Occupancy Standard for housing appropriateness (more detail can be found in box 10.1.3).

The main data sources for this measure are the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS), and the Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS), with the most recent available data for 2014-15 (all jurisdictions and remoteness). Supplementary data are also available from the ABS Census of Population and Housing, with the most recent data for 2011 (all jurisdictions by remoteness). Survey and Census data are not directly comparable.

Supplementary information is also provided on overcrowding as a stressor.

In 2009, COAG agreed to the National Affordable Housing Agreement (NAHA), and included an outcome for Aboriginal and Torres Strait Islander people to have ‘the same housing opportunities as other Australians, and improved housing amenity and reduced overcrowding, particularly in remote areas and discrete communities’ (COAG 2009a). The NAHA is supported by National Partnership agreements on homelessness and, for Aboriginal and Torres Strait Islander Australians, remote Indigenous housing. In remote and very remote areas in particular, it is more expensive and logistically more difficult to construct and maintain housing and associated infrastructure (COAG 2009b; Fien and

¹ The Steering Committee notes its appreciation to the Working Group on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the report.

Charlesworth 2012; Office of the Auditor General Western Australia 2015; Pholeros and Phibbs 2012).

Better, less cramped living conditions have been linked to positive effects on Aboriginal and Torres Strait Islander health, education and family relationships:

- health — if a house is appropriately designed for the number of residents and adequately maintained, the bathroom, and adequate kitchen and laundry facilities make it easier to prevent the spread of infectious diseases and to encourage good environmental health (AIHW 2015; Clifford et al. 2015; NSW Department of Health 2010). The impacts of environmental health are discussed further in section 10.2
- education — learning and cognitive development of all Australian children has been shown to be negatively affected by crowding, with the effect increasing for each additional person per bedroom. The same study showed that Aboriginal and Torres Strait Islander children were more likely to experience crowding (Dockery et al. 2013). Extra space gives children and young people opportunities for enough sleep and relaxation, and allows them to do homework and study without outside disruptions (Biddle 2007)
- family relationships — increase in control over living space, or additional space may help to reduce domestic tensions, leading to fewer instances of domestic violence (Bailie and Wayte 2006).

Cultural and social factors influence the way housing is used by different Aboriginal and Torres Strait Islander people and communities, and it is important to consider the relationship between culturally appropriate household size and overcrowding (AIHW 2014; Birdsall-Jones and Corunna 2008; Memmott, Birdsall-Jones and Greenop 2012; 2014; Memmott 2014). Households with many members, often of multiple generations, and including extended family, are not unusual in Aboriginal and Torres Strait Islander communities, and may be the preferred way of living for some families (AHMAC 2015; Memmott, Greenop and Birdsall-Jones 2014). McDonald (2011), summarising the research and policy on Aboriginal and Torres Strait Islander housing and the relationship to Closing the Gap, notes that larger Aboriginal and Torres Strait Islander households also frequently encompass kin who are elderly, or people with poor mental or physical health, which presents additional stress and challenges.

Larger households may also increase social connectivity, which is associated with positive impacts on health (AHMAC 2015). In a small qualitative study of 69 Aboriginal and Torres Strait Islander householders, Memmott, Greenop and Birdsall-Jones (2014) found that sharing was a central value of Aboriginal and Torres Strait Islander identity, as was mutual care of extended family and people chose to stay in houses with large numbers of people due to ties with kin and place. The number of people staying in the house was not the most significant source of stress, but rather a lack of control over who stayed and/or their behaviour. Stress was mediated when the householder required firm adherence to house rules, including the organisation of sleeping spaces, and sharing visitors among other family households. Foster et. al's (2011) research synthesis of housing and health

evidence, suggests that if heads of Indigenous households have the ability to control and manage the available space (including the allocation of bedrooms), it protects against some of the effects of overcrowding. Furthermore, the research synthesis included a summary of Zubrick et.al's (2006) work on the Western Australian Aboriginal Child Health Survey (WAACHS), which showed that children in larger households were 'half as likely [to be] at risk of clinically significant behavioural and emotional difficulties as children in low-occupancy households'.

Box 10.1.3 Housing occupancy standard used by ABS

There is no single standard measure for housing overcrowding. The ABS uses a standard which is sensitive to both household size and composition (based on the Canadian National Occupancy Standard). Using the following criteria to assess bedroom requirements, households requiring at least one additional bedroom are considered to be overcrowded:

- There should be no more than two persons per bedroom
- A household of one unattached individual may reasonably occupy a bed-sit (that is, have no bedroom)
- Couples and parents should have a separate bedroom
- Children less than five years of age of different sexes may reasonably share a bedroom
- Children five years of age or over of different sexes should not share a bedroom
- Children less than 18 years of age and of the same sex may reasonably share a bedroom.

Single household members aged 18 years or over should have a separate bedroom (ABS 2011).

The housing occupancy standard used for this report will reflect the culture and preferences of some, but not all, Aboriginal and Torres Strait Islander people. For example, it does not account for the influence of climate and culture on living arrangements, which vary widely across Australia. In climatic conditions such as extreme heat, it is likely that all members of the household will occupy the most comfortable area of the house (DSS 2007). In warmer rural areas, people may live outside their houses rather than inside them at certain times of the year, and the standard does not take into account how verandahs or larger living spaces might be used (Pholeros, Rainow and Torzillo 1993).

The sizes of Aboriginal and Torres Strait Islander households and community populations can fluctuate dramatically. People may move to visit relatives, to avoid adverse weather events, to escape overcrowding or domestic violence, or to travel to access health and social services. A shortage of affordable and flexible housing options may lead travellers to overcrowded homes of relatives', public space dwelling and homelessness (Habibis et al. 2011). Some Aboriginal and Torres Strait Islander Australians reported to the ABS that they have family and cultural responsibilities in providing shelter, and that refusing visitors is considered culturally inappropriate, leading to crowded dwellings (ABS 2013).

Overcrowding in housing

Nationally in 2014-15, the proportion of Aboriginal and Torres Strait Islander Australians of all ages living in overcrowded households was 20.6 per cent. This was a similar result to 2012-13 (22.6 per cent), but lower than in 2008 (27.5 per cent) and 2004-05 (27.0 per cent). From 2004-05 to 2014-15, there were decreases in overcrowding in Queensland (from 29.6 per cent to 20.0 per cent), WA (from 32.7 per cent to 25.4), SA (from 24.1 per cent to 12.9 per cent) and the NT (from 66.2 per cent to 53.0 per cent) (figure 10.1.1).

Figure 10.1.1 Proportion of Aboriginal and Torres Strait Islander people (of all ages) in overcrowded households, 2004-05 to 2014-15^{a,b}

^a Households requiring at least one additional bedroom, based on the Canadian National Occupancy Standard for Housing Appropriateness. ^b Error bars represent 95 per cent confidence intervals around each estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2014-15; table 10A.1.1.

The average number of people per bedroom in Aboriginal and Torres Strait Islander households was 1.1 in 2004-05 and 2008, 1.0 in 2012-13 and 0.8 in 2014-15. These data are also reported by State and Territory, by average number of bedrooms per household and average number of persons per bedroom (table 10A.1.4).

Overcrowding increases with remoteness. In 2014-15, the proportion of Aboriginal and Torres Strait Islander people of all ages living in overcrowded households ranged from 15.3 per cent in major cities up to 49.4 per cent in very remote areas, with a similar trend

observed in 2004-05, 2008 and 2012-13. Over time, overcrowding in very remote areas, decreased from 63.4 per cent in 2004-05 to 49.4 per cent in 2014-15 (figure 10.1.2).

Figure 10.1.2 Proportion of Aboriginal and Torres Strait Islander people (of all ages) in overcrowded households, by remoteness, 2004-05 to 2014-15^{a,b}

^a Households requiring at least one additional bedroom, based on the Canadian National Occupancy Standard for Housing Appropriateness. ^b Error bars represent 95 per cent confidence intervals around each estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2014-15; table 10A.1.2.

Although not directly comparable with survey results, Census data indicate that overcrowding rates among non-Indigenous Australians are relatively low compared with those for Aboriginal and Torres Strait Islander Australians (in 2011, 6.1 per cent compared with 23.4 per cent) (table 10A.1.8)). Census data by Indigenous status, by household size (10A.1.7), and overcrowding in Aboriginal and Torres Strait Islander households are also reported for all jurisdictions by remoteness (10A.1.8) and by tenure type (10A.1.9).

Overcrowding by housing tenure

Rates of overcrowding vary according to housing tenure. In 2014-15, Aboriginal and Torres Strait Islander people of all ages living in rental households had higher overcrowding rates (23.5 per cent) than those living in households that were owned with or without a mortgage (13.0 per cent). Around four in five of those in overcrowded households were living in rental households (table 10A.1.5).

Additional data on housing by tenure type is available in section 9.3.

Overcrowding as a stressor

Nationally, the proportion of Aboriginal and Torres Strait Islander people aged 18 years and over reporting overcrowding as a stressor fell by more than two-thirds from 20.8 per cent in 2002 to 6.5 per cent in 2014-15. Decreases over this period were seen across all remoteness areas, with the largest decrease in very remote areas (from 50.2 per cent to 9.8 per cent) (figure 10.1.3).

Figure 10.1.3 Proportion of Aboriginal and Torres Strait Islander people (18 years and over) reporting overcrowding as a stressor, by remoteness, 2002 to 2014-15^a

^a Error bars represent 95 per cent confidence intervals around each estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2002; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2014-15; table 10A.1.6.

Things that work

Overcrowding can be due to lack of access to adequate, appropriate and well-maintained housing stock (AIHW 2009). Larger households need not be overcrowded, provided sufficient space is available, which includes extra bedrooms, bathrooms, kitchen spaces

and storage space for personal possessions. This requires innovation in the provision of housing, rather than changes to household structure (AHMAC 2012; Healthhabitat 2013).

Aside from additional or improved housing stock, better service responses can help manage overcrowding. This could be done by providing transport or financial assistance to individuals and families to return to home communities (when visiting larger population centres for access to services), supporting host households to manage visitors, providing accessible short-term accommodation, and developing partnerships with health services (for example, to meet the needs of renal dialysis patients) (Habibis et al. 2011).

Future directions in data

The current model of overcrowding used by the ABS, based on the Canadian National Occupancy Standard, is structured around the number of people per bedroom (box 10.1.3). The size and type of housing influences the impact of overcrowding, and the lifespan and amenity of houses. Data on the number of bedrooms, the number and type of areas for storing food, washing people, laundry and sewerage facilities would give a more complete picture. Pholeros and Phibbs (2012) note that crowding could also be examined using a ‘stress model’ where reducing or removing sources of stress may be more helpful. It is desirable to investigate the most suitable concepts for measuring overcrowding in Aboriginal and Torres Strait Islander households, to present a more meaningful picture of how it affects Aboriginal and Torres Strait Islander Australians.

10.2 Rates of disease associated with poor environmental health²

Box 10.2.1 Key messages

- From 2003–2007 to 2010–2014, after adjusting for differences in population age structures, the death rate for Aboriginal and Torres Strait Islander Australians from diseases associated with poor environmental health decreased (from 52.2 to 43.0 per 100 000 population) but was still 1.7 times the non-Indigenous rate (for NSW, Queensland, WA, SA and the NT combined) (tables 10A.2.8–10).
- Nationally in 2014–15, hospitalisation rates for Aboriginal and Torres Strait Islander Australians for diseases associated with poor environmental health:
 - were highest for intestinal infectious diseases (758.3 per 100 000 population), influenza and pneumonia (736.0 per 100 000 population), and bacterial disease (512.1 per 100 000 population) (table 10A.2.1)
 - (after adjusting for population age structures) were higher than for non-Indigenous Australians for all selected diseases (table 10A.2.4)
 - were higher in remote and very remote areas than in non-remote areas for all selected diseases. There was no clear relationship between disease rates and remoteness for non-Indigenous Australians (table 10A.2.4–6).
- From 2004–05 (2008–09 for intestinal infectious diseases) to 2014–15 for NSW, Victoria, Queensland, WA, SA and the NT combined, hospitalisation rates for Aboriginal and Torres Strait Islander Australians for most selected diseases increased (table 10A.2.7).

Box 10.2.2 Measures of rates of disease associated with poor environmental health

There are two main measures for this indicator.

- *Hospitalisation rates for selected types of environmentally based diseases* is defined as the number of people with a disease associated with poor environmental health divided by the population, and is presented as a rate per 100 000 people. Data for this measure are sourced from the AIHW National Hospital Morbidity Database, with the most recent data available for 2014–15 (all jurisdictions; age; remoteness).
- *Death rates for diseases associated with poor environmental health* is defined as the number of deaths associated with poor environmental health divided by the population, and is presented as a rate per 100 000 people. Data for this measure are sourced from the ABS Causes of Death collection, with the most recent available data for 2014 (NSW, Queensland, WA, SA and the NT; sex).

During the late 1800s and early 1900s, most public health efforts focused on the control of infectious diseases, particularly epidemics. In the following century, improvements in

² The Steering Committee notes its appreciation to the Working Group on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the report.

sanitation, drinking water quality, food safety, disease control and housing conditions resulted in large improvements in public health and longevity for most Australians (AIHW 2014; EnHealth Council 2000). However, many rural and remote Aboriginal and Torres Strait Islander communities still struggle to achieve the basic level of environmental health that has been achieved for the rest of the population (EnHealth Council 2000; Knibbs and Sly 2014; McDonald, Bailie and Michel 2013).

Environmental risk factors can be defined as the biological, chemical and physical agents in the natural and built environments that are capable of causing harm (Knibbs and Sly 2014). Aboriginal and Torres Strait Islander Australians may be more likely to be affected by environmental risk factors, and factors that may be particularly relevant include poor housing, household crowding and inadequate waste, sanitation and waste facilities (Australian Indigenous HealthInfoNet 2008; Clifford et al. 2015; McDonald et al. 2008; Melody et al. 2016; Torzillo et al. 2008). Identifying the environmental health challenges within Aboriginal and Torres Strait Islander communities, and targeting factors to modify or reduce their negative impacts could result in significant improvements in health for Aboriginal and Torres Strait Islander individuals, however, more research is required as there is little current evidence from which to draw clear conclusions (Clifford et al. 2015; Knibbs and Sly 2014; Melody et al. 2016).

Hospitalisation rates for selected diseases

The hospitalisation data used in this section reflect more serious cases of diseases, but do not necessarily show the overall incidence of disease, as people may not go to a hospital for treatment. Also, a patient in a remote area may be admitted to hospital whereas the same patient in an urban area might be managed as an outpatient. Hospital data can include some duplication, as patients can have multiple admissions for some chronic conditions, as well as changes in conditions (such as transfer from a medical ward to a rehabilitation centre within a hospital) (AIHW 2014).

For this report, hospitalisations data are presented for the non-Indigenous population from 2012-13 onwards (for prior years the data are presented for 'other' which includes non-Indigenous Australians and those for whom Indigenous status is unknown or not stated). Prior to 2010-11, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have adequate identification of Aboriginal and Torres Strait Islander Australians in hospitalisation data. The attachment tables for this report include hospitalisations data for all jurisdictions for 2012-13 to 2014-15 for Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians, as well as data for the six jurisdictions for 2004-05 to 2014-15 for Aboriginal and Torres Strait Islander Australians and other Australians.

Nationally in 2014-15, hospitalisation rates for Aboriginal and Torres Strait Islander Australians for diseases associated with poor environmental health were highest for intestinal infectious diseases (758.3 per 100 000 population), influenza and pneumonia

(736.0 per 100 000 population), and bacterial disease (512.1 per 100 000 population) (table 10A.2.1). For these three environmental diseases, hospitalisation rates were higher for those aged 65 years and over compared to younger age groups (table 10A.2.2).

In 2014-15, after adjusting for differences in population age structures, hospitalisation rates for diseases associated with poor environmental health for Aboriginal and Torres Strait Islander Australians were 2.3 times higher than for non-Indigenous Australians, and higher in remote and very remote areas than non-remote areas for all disease types. There was no clear correlation between disease rates and remoteness for non-Indigenous Australians (table 10A.2.4).

Data for 2012-13 and 2013-14 on hospitalisation numbers and rates for diseases associated with poor environmental health are available in table 10A.2.1, and by remoteness in tables 10A.2.5–6.

Between 2004-05 and 2014-15, for NSW, Victoria, Queensland, WA, SA and the NT combined, age standardised hospitalisation rates for Aboriginal and Torres Strait Islander Australians:

- increased for influenza and pneumonia (from 1011.7 to 1126.5 per 100 000 population) and bacterial disease (from 545.5 to 842.5 per 100 000 population)
- decreased slightly for asthma (from 318.3 to 296.4 per 100 000 population) (table 10A.2.7).

Between 2008-09³ and 2014-15, for NSW, Victoria, Queensland, WA, SA and the NT combined, age standardised rates for Aboriginal and Torres Strait Islander Australians for intestinal infectious diseases increased (from 716.0 to 985.0 per 100 000 population in 2012-13) (table 10A.2.2).

For comparison between populations, age standardised rates showing the differences in hospitalisations between Aboriginal and Torres Strait Australians and non-Indigenous Australians are presented in figure 10.2.1 for selected disease types, and show hospitalisation rates for Aboriginal and Torres Strait Islander Australians are higher than for non-Indigenous Australians, with similar trends over time.

³ In 2008-09, coding for intestinal infectious diseases changed as a result of changes to gastroenteritis coding in the Australian Modification of the 10th revision of the International Classification of Diseases. Therefore, rates of intestinal diseases cannot be compared with rates for previous years, resulting in a break in the time series. See attachment tables for further caveats to these data.

Figure 10.2.1 Age standardised hospitalisation rates for selected diseases, NSW, Victoria, Queensland, WA, SA, and public hospitals in the NT, 2004-05 to 2014-15^{a, b, c}

^a Directly age standardised using the 2001 Australian population. ^b 'Other' includes 'non-Indigenous' and cases where Indigenous status was 'not stated'. ^c See table 10A.2.7 for further caveats on these data.

Sources: AIHW (unpublished) National Hospital Morbidity Database; table 10A.2.7.

Acute rheumatic fever and trachoma are close to being unknown in the non-Indigenous population but remain at relatively high rates among some populations of Aboriginal and Torres Strait Islander Australians, particularly in areas with poor environmental health coupled with poor hygiene practices (AIHW 2013, 2015; The Kirby Institute, UNSW 2015).

Although based on small numbers, in 2014-15, after adjusting for differences in population age structures, the hospitalisation rate for Aboriginal and Torres Strait Islander Australians for acute rheumatic fever was 43 times the rate for non-Indigenous Australians (table 10A.2.4). Hospitalisation rates for trachoma are suppressed due to the small

numbers, but 2014 surveillance data are available for 125 communities at ‘higher risk’ of trachoma and screened for the condition in NSW (10 communities), WA (58 communities), SA (13 communities) and the NT (44 communities). In 2014, the rates of active trachoma prevalence in children aged 5–9 years were 5.5 per cent in the NT, 4.0 per cent in SA, 2.0 per cent in WA, and 0.0 per cent in NSW, and a total across the four states of 3.7 per cent (The Kirby Institute, UNSW 2015).

Remote Aboriginal communities of northern Australia have had some of the highest reported rates of crusted scabies in the world (Lokuge et al. 2014; Romani et al. 2015). In 2014–15, after adjusting for differences in population age structures, the hospitalisation rate for Aboriginal and Torres Strait Islander Australians for scabies was 51 times the rate for non-Indigenous Australians (table 10A.2.4).

Death rates for diseases associated with poor environmental health

Data on deaths from diseases associated with poor environmental health are available for five jurisdictions (NSW, Queensland, WA, SA and the NT). The sample size of Aboriginal and Torres Strait Islander identification and quality of data from these jurisdictions was considered acceptable for statistical analysis. Data are available in five-year groupings due to the volatility of small numbers each year.

After adjusting for population age structures, the death rate for Aboriginal and Torres Strait Islander Australians from diseases associated with poor environmental health was 1.8 times the non-Indigenous rate in 2003–2007 and 1.7 times the non-Indigenous rate in both 2008–2012 and 2010–2014 (for NSW, Queensland, WA, SA and the NT combined) (tables 10A.2.8–10). These ratios were similar for males and females (tables 10A.2.8–10).

Things that work

Box 10.2.3 provides an example of a program that helps improve environmental health for Aboriginal and Torres Strait Islander Australians, through management of crusted scabies. Scabies is caused by a mite living in the skin, and subsequent skin infections can lead to kidney and heart problems. Crusted scabies, a type of scabies caused by the same mite, is highly contagious, and occurs when a person’s immune system cannot control the number of mites. There is often a reduced life expectancy and a high risk of reoccurrence, and this disease is managed as a chronic disease (Central Australian Rural Practitioners Association 2014).

Box 10.2.3 'Things that work' — Improving environmental health for Aboriginal and Torres Strait Islander Australians

The East Arnhem Scabies Control Program (EASCP) was established in early 2011 as a joint initiative of One Disease, Miwatj Health Aboriginal Corporation and the NT Government Department of Health. The program has three main goals:

1. to eliminate crusted scabies as a public health issue in all participating East Arnhem communities by the end of the third year of the program
2. to document a 50 per cent reduction in scabies and skin sores rates from baseline by the end of the third year of the program in at least three participating communities while aiming for all communities
3. to support related environmental health and regulatory initiatives.

The program was evaluated between August 2011 and June 2013.¹ Seven patients in the three communities under evaluation and seven paired contacts (a household child contact with the same primary residence) were included.

The evaluation found that, compared to the baseline (prior to intervention), there was a significant decrease in total recurrences of crusted scabies (44 per cent) and paired contact presentations for simple scabies (58 per cent).

These results are positive, although the generalisability of the results may be limited by the small sample size (active case finding by the EASCP across 11 remote communities of northern Australia has confirmed 20 cases from early 2011 to April 2014). Despite this limitation, the Central Australian Rural Practitioners Association Standard treatment manual (2014) has been updated to feature the EASCP's model of care.

¹ Although this evaluation was not independent, it was published in the Medical Journal Of Australia (MJA), a leading peer-reviewed general medical journal.

10.3 Access to clean water and functional sewerage and electricity services⁴

Box 10.3.1 Key messages

- Access to clean water, functional sewerage and electricity services are essential services for all communities, affecting outcomes such as education and health.
- Nationally in 2014-15, more than nine in ten Aboriginal and Torres Strait Islander households reported working household facilities (96.7 per cent for washing people, 96.5 per cent with working sewerage facilities, 91.3 per cent for washing clothes and bedding, 92.0 per cent for preparing and storing food (table 10A.3.2)).
- However, one in four Aboriginal and Torres Strait Islander households lived in a dwelling with at least one major structural problem (25.7 per cent), with the proportion higher in very remote areas (37.4 per cent) (table 10A.3.4).
- Compared with non-Indigenous households, Aboriginal and Torres Strait Islander households were more likely to report at least one type of major structural damage to the dwelling (25.7 per cent and 13.6 per cent, respectively), and reported more of each type of structural damage (tables 10A.3.4–5; figure 10.3.2).
- New data on access to clean water, functional sewerage and electricity services for discrete Indigenous communities were not available for this report (the most recent available data are for 2006).

Box 10.3.2 Measures of access to clean water, functional sewerage and electricity services

There are two main measures for this indicator.

- *Access to common/community water, sewerage and electricity services* is defined as the proportion of discrete Indigenous communities with access to common/community water, sewerage and electricity services. There is no current data source available for this measure (the most recent available data are for 2006).
- *Aboriginal and Torres Strait Islander households living in housing of an acceptable standard* is defined as a household with four working facilities and not more than two major structural problems. The data source for this measure is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent data for 2014-15 (all jurisdictions and capital city and balance of state). Supplementary data for the components of working facilities and major structural problems are also reported (all jurisdictions and remoteness). The data from the AATSIHS are 'self-reported' and are based on the respondent's view of their house and its functionality.

Access to clean water, functional sewerage and electricity services are essential services for all communities, affecting services such as education and health, as well as an

⁴ The Steering Committee notes its appreciation to the Working Group on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the report.

individual's health (FaHCSIA and CAT 2010). A clean, adequate and reliable supply of water is required for drinking, cooking and washing, and a functional sewerage system prevents sewage from contaminating drinking water and food (Australian Indigenous HealthInfoNet 2008, 2013). Access to a reliable energy supply (generally electricity or gas) is essential for cooking, refrigeration, and running household appliances, such as washing machines (AHMAC 2012). Adequate disposal of human waste, rubbish removal and power supply are associated with better health outcomes (Osbourne, Baum and Brown 2013).

Access to functional 'health hardware', which supports the healthy living practices, is associated with a positive impact on health, as found in Ware's review of housing and health literature (2013). Health hardware comprise key appliances and structures, and include: 'toilets, lights, and drains to taps, showers and kitchens' (Pholeros et al. 2013).

Literature reviews have found that it is more expensive and logistically more difficult to construct and maintain housing and associated infrastructure in remote areas (Fien and Charlesworth 2012; Ware 2013). Furthermore, concerns have been raised that infrastructure in remote Aboriginal and Torres Strait Islander communities does not meet the standard generally available in equivalent non-Indigenous communities. A 2009-10⁵ audit of municipal and essential services, involving site visits to 86 remote Aboriginal and Torres Strait Islander communities and 14 non-Indigenous communities of comparable size and location, found that there were differences between remote Aboriginal and Torres Strait Islander communities, and remote non-Indigenous communities, stating:

... the level of infrastructure in remote Indigenous communities does not meet the standard generally available in non-Indigenous communities of a similar size and location, and ... services are consistently unreliable and suffer major disruptions ... (DSS 2013).

There is a need for more data allowing comparison between services in Aboriginal and Torres Strait Islander communities and those in equivalent non-Indigenous communities.

In 2009, COAG agreed to the National Affordable Housing Agreement (NAHA), which included an outcome that Aboriginal and Torres Strait Islander Australians should have 'the same housing opportunities as other Australians, and improved housing amenity ... particularly in remote areas and discrete communities' (COAG 2009a).

The NAHA is supported by the National Partnership Agreement on Remote Indigenous Housing (NPARIH), which aims to improve housing in remote communities, including funding for minor repairs and maintenance (COAG 2009b). In 2015, the Department of the Prime Minister and Cabinet reported on progress under the COAG reform agenda, and stated that the NPARIH was on track to achieve its objectives. Since the commencement of NPARIH in 2008 to the end of March 2015, a total of 2662 new houses, and 7051

⁵ The national Municipal and Essential Services Audit (the audit) was agreed to by the Commonwealth, State and NT Governments under the NPARIH in November 2008. The audit was undertaken by a number of audit delivery teams consisting of professional engineers, across each jurisdiction. The Australian Government advised that the audit was conducted in accordance with an audit implementation plan, agreed to by the Commonwealth, State and NT governments during November–December 2009.

refurbishments have been completed (Department of the Prime Minister and Cabinet 2015).

Water, sewerage and electricity services in Aboriginal and Torres Strait Islander communities

Many Aboriginal and Torres Strait Islander Australians live in urban areas where reliable drinking water, sewerage and electricity systems are available to everyone. In rural and remote areas, there is a greater reliance on local or individual household systems, like generators, septic tanks and drinking water sourced from bores and rainwater tanks (Australian Indigenous HealthInfoNet 2013). Access to water can be particularly important for community wellbeing, as water can play ‘... a vital role in the cultural, spiritual, emotional and physical wellbeing of rural Aboriginal communities.’ (Jaravani et al. 2016).

There are no current data available for the Steering Committee’s preferred measure of ‘access to common/community water, sewerage and electricity services’. Previous reports have presented data from the 2001 and 2006 ABS Community Housing and Infrastructure Needs Survey (CHINS) (ABS 2007) (tables 10A.3.8–14), however, these CHINS data predate the introduction of the NAHA and NPARIH, and may not be representative of current conditions.

Aboriginal and Torres Strait Islander households living in housing of an acceptable standard

Reporting on Aboriginal and Torres Strait Islander households living in housing of an acceptable standard is aligned with the related indicator in the National Affordable Housing Agreement (COAG 2009a).

The ‘acceptable standard’ measure is made up of two components:

- working household facilities
- major structural problems.

Nationally in 2014-15, 81.8 per cent of Aboriginal and Torres Strait Islander households reported living in houses of an acceptable standard (with similar results in capital cities and other areas). These data were similar to 2008 (85.4 per cent), following an increase from 2012-13 (77.8 per cent) driven by a rise in the proportion of those in areas outside of capital cities (from 76.2 per cent in 2013-14 to 81.4 per cent in 2014-15) (table 10A.3.1).

Access to household facilities

Nationally in 2014-15, more than nine in ten Aboriginal and Torres Strait Islander households reported working household facilities:

- 96.7 per cent for washing people — similar to 2008 (97.8 per cent)
- 96.5 per cent with working sewerage facilities — similar to 2008 (97.7 per cent)
- 91.3 per cent for washing clothes and bedding — decreased from 2008 (93.4 per cent)
- 92.0 per cent for preparing and storing food — similar to 2008 (93.1 per cent) (table 10A.3.2).

In 2014-15, a lower proportion of Aboriginal and Torres Strait Islander households in very remote areas reported access to working household facilities, for preparing food and washing clothing/bedding, than those in less remote areas (figure 10.3.1).

Figure 10.3.1 Proportion of Aboriginal and Torres Strait Islander households reporting access to working household facilities, by remoteness, 2014-15^a

^a Error bars represent 95 per cent confidence intervals around the estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2014-15; tables 10A.3.3.

Housing with major structural problems

Nationally in 2014-15, one in four Aboriginal and Torres Strait Islander households lived in a dwelling with major structural problems (25.7 per cent) (table 10A.3.4), with a larger proportion of households in very remote areas (37.4 per cent) reporting these issues, compared with households in other areas. The most commonly reported problem (in remote and non-remote areas) was major cracks in walls/floors (10.5 per cent) (table 10A.3.7).

The proportion of Aboriginal and Torres Strait Islander households reporting major structural problems (excluding rising damp, for historical comparisons) in 2014-15 was similar to the proportion in 2008 (26.1 per cent in 2008 and 24.8 per cent in 2014-15), following a decrease from 2012-13 (33.8 per cent) (table 10A.3.4 and 10A.3.6).

In 2014-15, the proportion of Aboriginal and Torres Strait Islander households reporting at least one type of major structural problem was almost twice that for non-Indigenous households, and with higher proportions reported for each type of structural damage (table 10A.3.4–5; figure 10.3.2).

Figure 10.3.2 Dwellings with major structural problems, by problem type, by Indigenous status, 2014-15^a

Sources: ABS (unpublished) 2014-15 National Aboriginal and Torres Strait Islander Social Survey; ABS (unpublished) 2013-14 Survey of Income and Housing; tables 10A.3.4–5.

Future directions in data

Recent data on access to water, sewerage and electricity services are not available. The CHINS was conducted in 1994, 2001 and 2006. There is currently no date for the next CHINS, despite an agreed NPARIH output being ‘improved data collection through a three-yearly CHINS-like collection’ (COAG 2009b). New data for this measure, whether from the CHINS or a comparable survey, are critical to enable ongoing reporting for Aboriginal and Torres Strait Islander access to common/community water, sewerage and electricity services.

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) Households requiring at least one additional bedroom, based on the Canadian National Occupancy Standard for Housing Appropriateness.

(c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Estimates with a relative standard error of 25 per cent to 50 per cent should be interpreted with caution.

(b) 'Housing tenure' refers to the nature of a household's legal right to occupy the dwelling in which the household members usually reside. Tenure is determined according to whether any person living in the household owns the dwelling outright, owns the dwelling but has a mortgage or loan secured against it, is paying rent to live in the dwelling, or has some other arrangement to occupy the dwelling.

(c) Households requiring at least one additional bedroom, based on the Canadian National Occupancy Standard for Housing Appropriateness.

(d) Comprises participants in rent/buy schemes and those living in a household in which payments were being made on mortgages or secured loans towards the purchase of the dwelling.

(e) Includes those occupying households rent free, boarders, other tenure and those under a life tenure scheme.

(f) Includes tenure type not stated.

Average number of persons per bedroom (e)	no.	1.0	0.8	0.8
2001				
Average household size (d)	no.	3.5	2.6	2.6
Average number of persons per bedroom (e)	no.	1.3	0.8	0.8

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) A household with Aboriginal and Torres Strait Islander members is any household that at least one person of any age as a resident at the time of the Census who identified as being of Aboriginal and/ or Torres Strait Islander origin.

(c) Includes households which did not have at least one person of any age as a resident at the time of the Census who identified as being of Aboriginal and/ or Torres Strait Islander origin.

(d) Average household size is the number of people usually resident in occupied private dwellings. Includes partners, and co-tenants (in group households) who were temporarily absent on Census night. A maximum of three temporary absentees can be counted in each household. Excludes 'visitor only' and 'Other not classifiable' households.

(e) Average number of persons per bedroom is applicable to occupied private dwellings. Excludes 'Visitor only' and 'Other not classifiable' households.

Source: ABS (unpublished) derived from the 2001, 2006 and 2011 Census of Population and Housing.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Australia total includes Other Territories.

(c) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness.

The measure assesses the bedroom requirements of a household by specifying that:

- there should be no more than two persons per bedroom
- children less than 5 years of age of different sexes may reasonably share a bedroom
- children 5 years of age or older of opposite sex should have separate bedrooms
- children less than 18 years of age and of the same sex may reasonably share a bedroom
- single households members 18 years or over should have a separate bedroom, as should parents or couples.

Households living in dwellings where this standard cannot be met are considered to be overcrowded.

(d) Includes 'Aboriginal', 'Torres Strait Islander', 'Both Aboriginal and Torres Strait Islander'.

(e) Total for Australia also includes Migratory/Offshore and No Usual Address. For 2001 also includes inadequately described/not stated.

(f) Persons living in overcrowded households as a proportion of all Family, Lone Person and Group Households.

.. Not applicable. — Nil or rounded to zero.

Source: ABS (unpublished) derived from the 2001, 2006 and 2011 Census of Population and Housing.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Australia total includes Other Territories.

(c) Includes 'Aboriginal', 'Torres Strait Islander', 'Both Aboriginal and Torres Strait Islander'.

(d) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness.

The measure assesses the bedroom requirements of a household by specifying that:

- there should be no more than two persons per bedroom
- children less than 5 years of age of different sexes may reasonably share a bedroom
- children 5 years of age or older of opposite sex should have separate bedrooms
- children less than 18 years of age and of the same sex may reasonably share a bedroom
- single households members 18 years or over should have a separate bedroom, as should parents or couples.

Households living in dwellings where this standard cannot be met are considered to be overcrowded.

(e) Also includes households being purchased under a rent/buy scheme.

(f) Includes rented households where the Landlord type was not stated.

(g) Includes households where the Tenure Type was not stated.

(h) Persons living in overcrowded households as a proportion of all Family, Lone Person and Group Households.

– Nil or rounded to zero.

Source: ABS (unpublished) derived from the 2001, 2006 and 2011 Census of Population and Housing.

TABLE 10A.2.1

(a) Data are from public and private hospitals in all jurisdictions.

(b) Categories are based on ICD -10 -AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Any diagnosis was used to select the infectious diseases (ICD-10-AM codes A00-B99), principal diagnosis was used to select the other conditions. There may therefore be overlap between the 'Intestinal infectious diseases' and other categories.

(c) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(d) 'Non-Indigenous' includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

(e) Rates are per 100 000 population. Major cities, inner and outer regional, and remote and very remote rates are calculated using the ABS 2012 Estimated Resident Population by remoteness based on the 2011 Census, and are directly age standardised using the 2001 Australian population.

(f) Rate ratio is the age standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the non-Indigenous hospitalisation rate.

- Nil or rounded to zero. **np** Not published.

Source: AIHW (unpublished) National Hospital Morbidity Database.

- (a) Any diagnosis was used to select the infectious diseases (ICD-10-AM codes A00-B99), principal diagnosis was used to select the other conditions. There may therefore be overlap between the 'Intestinal infectious diseases' and other categories. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases) 10th Revision, Australian Modification.
- (b) Data are reported by State or Territory of usual residence of the patient hospitalised.
- (c) From 2004-05 to 2009-10, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Indigenous identification in hospitalisation data. From 2010-11 onwards, data for all jurisdictions are considered to be of acceptable quality.
- (d) Data are reported for residents of these jurisdictions and exclude separations from private hospitals in the NT.

Table 10A.2.7 Age standardised hospitalisation rates for selected types of environmentally based diseases for Aboriginal and Torres Strait Islander people (per 100 000 population), 2004-05 to 2014-15 (NSW, Victoria, Queensland, WA, SA and NT) (a), (b), (c), (d)

	2014-15	2013-14	2012-13	2011-12	2010-11	2009-10	2008-09	2007-08	2006-07	2005-06	2004-05
(e) In 2008-09 coding for intestinal infectious diseases changed as a result of changes to gastroenteritis coding in the ICD-10-AM. Persons aged 15 years and over, who were previously coded as K52.2 'Allergic and dietetic gastroenteritis and colitis', K52.8 'Other specified non-infective gastroenteritis and colitis', or K52.9 'Non-infective gastroenteritis and colitis, unspecified' could be coded in a newly created category A09.9 'Gastroenteritis and colitis of unspecified origin'. The extent to which the increase for adults represents a real increase in intestinal infectious diseases cannot be determined. Rates for intestinal infectious diseases from 2008-09 onward cannot be compared with rates for previous years.											
(f) Other' includes those identified as non-Indigenous and those with Indigenous status not stated.											
– Nil or rounded to zero. np Not available.

SA	60.0	41.0	49.6	30.2	27.0	28.4
NT	55.3	86.5	73.0	21.0	16.7	19.1
Total (k)	45.8	41.0	43.0	27.5	23.6	25.4

(a) All causes of death data from 2006 onward are subject to a revisions process — once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010-12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).

(b) ICD-10 codes for deaths from conditions associated with poor environmental health include: intestinal infectious diseases (A00-A09); tuberculosis (A15-A19); bacterial disease (A20-A49); trachoma (A71); acute hepatitis A (B15); acute hepatitis B (B16); scabies (B86); acute rheumatic fever (I00-I02); chronic rheumatic heart diseases (I05-I09); acute upper respiratory infections (J00-J06); influenza and pneumonia (J10-J18); asthma (J45) and lung disease due to external agents (J60-J70).

(c) Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These five states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.

(d) Data are presented in five year groupings due to the volatility of small numbers each year.

(e) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.

(f) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

(g) Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Indigenous across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Aboriginal and Torres Strait Islander and non-Indigenous data.

(h) Although most deaths of Aboriginal and Torres Strait Islander people are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these data are likely to underestimate the Aboriginal and Torres Strait Islander all causes mortality rate.

(i) Denominators used in the calculation of rates for the Aboriginal and Torres Strait Islander population are Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Aboriginal and Torres Strait Islander population have been derived by subtracting Aboriginal and Torres Strait Islander population estimates/projections from total estimated resident population and should be used with care, as these data include people for whom Indigenous status was not stated.

(j) Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) Acceptable standard is defined as a household with four working facilities (for washing people, for washing clothes/bedding, for storing/preparing food and sewerage) and not more than two major structural problems.

(c) Balance of state estimates for ACT are not separately available.

(d) Includes not stated.

na Not available.

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) There were differences in the question methodology between NATSISS 2002, 2008 and 2014-15 and AATSIHS 2012-13 when asking about functional household facilities. In 2002, households were asked about the presence of working facilities and in 2008, 2012-13 and 2014-15 households were asked about the absence of working facilities.

(c) In 2002, households were asked if they had adequate kitchen cupboard space as part of the food preparation facilities question. Households were not asked this in 2008, 2012-13 and 2014-15. Therefore, when comparing the proportion of households with working facilities for preparing food between 2002 and both 2008, and 2012-13 and 2014-15, caution should be used.

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) There were differences in the question methodology between NATSISS 2002, 2008, 2014-15 and AATSIHS 2012-13 when asking about functional household facilities. In 2002, households were asked about the presence of working facilities and in 2008, 2012-13 and 2014-15 households were asked about the absence of working facilities.

TABLE 10A.3.3

Table 10A.3.3 Aboriginal and Torres Strait Islander households, access to household facilities, by remoteness areas, 2002, 2008, 2012-13 and 2014-15 (a), (b)

	<i>Unit</i>	<i>Major cities</i>	<i>Inner regional</i>	<i>Outer regional</i>	<i>Total non-remote</i>	<i>Remote</i>	<i>Very remote</i>	<i>Total remote</i>	<i>Australia</i>
--	-------------	---------------------	---------------------------	---------------------------	-----------------------------	---------------	------------------------	-------------------------	------------------

(c) In 2002, households were asked if they had adequate kitchen cupboard space as part of the food preparation facilities question. Households were not asked this in 2008, 2012-13 and 2014-15. Therefore, when comparing the proportion of households with working facilities for preparing food between 2002 and 2008, 2012-13 and 2014-15, caution should be used.

– Nil or rounded to zero.

--	-------------	------------	------------	------------	-----------	-----------	------------	------------	-----------	------------------

(b) In the National Aboriginal and Torres Strait Islander Social Survey, an Aboriginal and Torres Strait Islander household is defined as an occupied private dwelling where at least one permanent resident identifies as being of Aboriginal or Torres Strait Islander origin.

(c) Data are not comparable with the 2008 National Aboriginal and Torres Strait Islander Social Survey.

(d) Sum of components may exceed total as households may have reported more than one type of structural problem.

(e) Includes households that did not state if they had structural problems.

np Not published.

TABLE 10A.3.6

Table 10A.3.6 Dwellings with major structural problems, Aboriginal and Torres Strait Islander households, by State/Territory, 2008 and 2012-13 (non-Indigenous, 2008) (a), (b)

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Australia</i>
(a) Estimates with a relative standard error of 25 per cent to 50 per cent should be interpreted with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use.										
(b) In the Australian Aboriginal and Torres Strait Islander Health Survey an Aboriginal and Torres Strait Islander household is defined as an occupied private dwelling where at least one permanent resident identifies as being of Aboriginal or Torres Strait Islander origin.										
(c) Data are not comparable with the 2008 National Aboriginal and Torres Strait Islander Social Survey.										
(d) Sum of components may exceed total as households may have reported more than one type of structural problem.										
(e) Includes households that did not state if they had structural problems.										
.. Not available. - Nil or rounded to zero.

	<i>Unit</i>	<i>Major cities</i>	<i>Inner regional</i>	<i>Outer regional</i>	<i>Total non-remote</i>	<i>Remote</i>	<i>Very remote (d)</i>	<i>Total remote</i>	<i>Australia</i>
Total with structural problems (excluding rising damp) (f) (g)	±	3.7	4.4	4.0	2.3	7.3	6.4	4.4	2.1
Non-Indigenous households									
Total with structural problems	±	1.4	2.2	3.4	1.0	9.2	1.0

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Estimates with a relative standard error of 25 per cent to 50 per cent should be interpreted with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use.

(b) In the National Aboriginal and Torres Strait Islander Social Survey and the Australian Aboriginal and Torres Strait Islander Health Survey, an Aboriginal and Torres Strait Islander household is defined as an occupied private dwelling where at least one permanent resident identifies as being of Aboriginal or Torres Strait Islander origin. In the Survey of Income and Housing a non-Aboriginal and Torres Strait Islander household is defined as a household containing no permanent residents who identified as being of Aboriginal or Torres Strait Islander origin.

(c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(d) Households in collection districts defined as 'very remote' were excluded from the 2007-08 Survey of Income and Housing.

(e) Includes households that did not state if they had structural problems.

(f) Sum of components may exceed total as households may have reported more than one type of structural problem.

(g) Excludes households that had rising damp as a major structural problem.

(h) In the 2011-12 Survey of Income and Housing (SIH), data on dwellings with major structural problems was not collected. In the SIH this data is collected as part of the additional housing content that is collected every six years. The additional housing content was collected in the 2007-08 and 2013-14 SIH.

.. Not applicable. - Nil or rounded to zero.

All communities	no.	865	123	92	71	19	17	322	1 187	92 960

(a) Data not collected in 'administered' communities. An administered community in the CHINS surveys is a discrete Indigenous community that has a population of less than 50 people and is linked to a larger parent discrete Indigenous community or a Resource Agency for the provision and maintenance of services such as housing, water, power supplies and sewerage.

(b) In the previous 12 months.

(c) Components may not add to totals as more than one response may be specified.

(d) Proportions have been calculated by the Steering Committee for the Review of Government Service Provision. The denominator for all proportions includes administered communities. Proportions are not available for communities with populations less than 50 or the all communities total because data was not collected in 'administered' communities.

- Nil or rounded to zero. **na** Not available.

11 Safe and supportive communities

Strategic areas for action

Safe and supportive families and communities provide a resilient, caring and protective environment, promoting a range of positive outcomes. However, problems in families and communities can contribute to disrupted social relationships, social alienation, alcohol and drug misuse and family violence.

The indicators in this strategic area for action focus on the key factors that contribute to safe and supportive communities:

- alcohol consumption and harm (section 11.1) — excessive alcohol consumption increases an individual's risk of death, disease and injury. Alcohol also contributes to family and community related problems, such as child abuse and neglect, work or financial problems, family breakdown, and violence and crime
- drug and other substance use and harm (section 11.2) — drug and other substance misuse contributes to illness and disease, accident and injury, violence and crime, family and social disruption, and workplace problems
- juvenile diversions (section 11.3) — diversionary alternatives in the juvenile justice system are aimed at reducing reoffending and the negative labelling and stigmatisation associated with formal contact with the criminal justice system
- repeat offending (section 11.4) — it is important that those who have had contact with the criminal justice system have the opportunity to integrate back into the community and lead positive and productive lives
- community functioning (section 11.5) — individual wellbeing is influenced by community wellbeing, and vice versa. Stronger community functioning, as defined by Aboriginal and Torres Strait Islander Australians themselves, will improve social, emotional and economic wellbeing.

Safe and supportive communities can have a positive influence across all the COAG targets and headline indicators. Three headline indicators are particularly associated with breakdown in family and community relationships:

- substantiated child abuse and neglect (section 4.11)
- family and community violence (section 4.12)
- imprisonment and juvenile detention (section 4.13).

Outcomes in the safe and supportive communities strategic area can be affected by outcomes in other strategic areas for action, or can influence outcomes in other areas:

- governance, leadership and culture (chapter 5)
- early child development (chapter 6)
- education and training (chapter 7)
- healthy lives (chapter 8)
- economic participation (chapter 9)
- home environment (chapter 10).

Attachment tables for this chapter are identified in references throughout this chapter by an ‘A’ suffix (for example, table 11A.1.1). These tables can be found on the web page (www.pc.gov.au/oid2016).

11.1 Alcohol consumption and harm¹

Box 11.1.1 Key messages

- Alcohol is a major risk factor affecting the wellbeing of Aboriginal and Torres Strait Islander Australians, their families and the broader community.
- Based on self-report by Aboriginal and Torres Strait Islander Australians aged 15 years and over, in 2014-15:
 - 39.9 per cent reported not consuming alcohol in the previous 12 months (or drank one day a year or less), an increase from 2008 (35.6 per cent) but similar to 2002 (38.3 per cent) (table 11A.1.1)
 - 15.2 per cent reported exceeding lifetime alcohol risk guidelines, a decrease from 19.4 per cent in 2008 and similar to 17.3 per cent in 2002 (figure 11.1.1)
 - 30.8 per cent reported exceeding single occasion risk guidelines in the two weeks prior to interview, lower than 38.2 per cent in 2008 and 35.1 per cent in 2002 (table 11A.1.1).
- Between 2004-05 and 2014-15, after adjusting for differences in population age structures, for NSW, Victoria, Queensland, WA, SA and the NT combined, the acute intoxication hospitalisation rate for Aboriginal and Torres Strait Islander Australians increased from 5.7 to 11.4 times the rate for other Australians (table 11A.1.10).
- For 2010–2014, after adjusting for differences in population age structures, for NSW, Queensland, WA, SA and the NT combined, the alcohol-induced death rate for Aboriginal and Torres Strait Islander Australians was 5 times the rate for non-Indigenous Australians (table 11A.1.15).

In 2013-14, the proportion of Aboriginal and Torres Strait Islander homicides involving both the victim and offender having consumed alcohol at the time of the offence (66.7 per cent — 16 out of 24) was higher than the proportion for non-Indigenous homicides (16.3 per cent — 23 out of 141) (table 11A.1.16).

Box 11.1.2 Measures of alcohol consumption and harm

There is one main measure for this indicator (aligned with the associated National Indigenous Reform Agreement [NIRA] indicator). *Levels of risky alcohol consumption* is defined as the proportion of Australians aged 18 years and over who consume alcohol at risky/high risk levels (more than two standard drinks on any day, based on the concept of 'Lifetime risk of alcohol harm' in the National Health and Medical Research Council [NHMRC] 2009 guidelines).

The most recent available data are from the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS) for 2014-15 (all jurisdictions; remoteness; sex; age). Comparable data are not available for non-Indigenous Australians and therefore the NIRA report does not use NATSISS data to report on alcohol consumption.

(continued next page)

¹ The Steering Committee notes its appreciation to Dr Kyllie Cripps, University of NSW, who reviewed a draft of this section of the report.

Box 11.1.2 (continued)

The NATSISS data in this report focus on people aged 15 years and over, consistent with the ABS NATSISS publication and the Australian Health Ministers' Advisory Council Aboriginal and Torres Strait Islander Health Performance Framework report.

Three supplementary measures are also reported:

- Alcohol related hospitalisations (all jurisdictions; sex; remoteness)
- Alcohol induced deaths (NSW, Queensland, WA, SA and the NT; sex)
- Alcohol involvement in homicides (national).

Alcohol is one of the major risk factors affecting the wellbeing of Aboriginal and Torres Strait Islander Australians (COAG 2012), with harmful alcohol consumption responsible for a considerable burden of death, disease and injury (AIHW 2012; NHMRC 2009). Years of alcohol misuse can lead to chronic diseases, and increase the risk of heart, stroke and vascular diseases, liver cirrhosis, several types of cancers and cognitive impairment (Gao, Ogeil and Lloyd 2014; NHMRC 2009). It also contributes to disability and death indirectly, through accidents, violence, suicide and homicide (AIHW 2014; Calabria et al. 2010). See section 4.9 for information on disability and chronic disease, and section 8.8 for information on suicide and self-harm.

Alcohol-related harm is not limited to drinkers but also affects families, bystanders and the broader community (Intergovernmental Committee on Drugs 2014; NHMRC 2009). Excessive alcohol consumption contributes to workplace problems, child abuse and neglect, financial problems (poverty), family breakdown, interpersonal/domestic violence, and crime (AIHW 2014; Laslett et al. 2010; Wild and Anderson 2007). Alcohol is a significant contributor to violence in Aboriginal and Torres Strait Islander communities (Livingston 2011; Meuleners et al. 2010; Wundersitz 2010). Substantiated child abuse and neglect is covered under section 4.11. Family and community violence is covered under section 4.12.

The National Health and Medical Research Council (NHMRC) guidelines advise not drinking as the safest option for women who are pregnant or planning a pregnancy (NHMRC 2009). Alcohol consumption during pregnancy may cause physical and neurocognitive disorders termed 'fetal alcohol spectrum disorders' (Fitzpatrick et al. 2012; O'Leary et al. 2007). Alcohol consumption during pregnancy, and associated impacts, is discussed in section 6.2.

Levels of risky alcohol consumption

In 2014-15, 39.9 per cent of Aboriginal and Torres Strait Islander Australians aged 15 years and over reported not consuming any alcohol in the previous 12 months (or drank one day a year or less). This was an increase from 2008 (35.6 per cent) but similar to

2002 (38.3 per cent) (table 11A.1.1). A higher proportion of Aboriginal and Torres Strait Islander Australians aged 55 years and over (53.6 per cent) reported not consuming any alcohol in the previous 12 months compared to other adult age groups (table 11A.1.3).

Exceeding lifetime risk guidelines

The 2009 NHMRC guidelines advise that, for healthy men and women, drinking no more than two standard drinks on any day reduces the lifetime risk of harm from alcohol related disease or injury.

Figure 11.1.1 Exceeding lifetime risk guidelines in the previous 12 months^{a, b}

^a Data exclude not stated responses. ^b Data for the 15–17 year old age cohort should be used with caution and are not separately reported in this chart.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2002, 2008 and 2014-15; table 11A.1.3.

Nationally in 2014-15, the proportion of Aboriginal and Torres Strait Islander Australians aged 15 years and over who reported exceeding lifetime risk guidelines:

- was 15.2 per cent, a decrease from 19.4 per cent in 2008 and similar to 17.3 per cent in 2002
- ranged from 11.4 per cent among those aged ‘55 years and over’ to 21.2 per cent among ‘35–44 year olds’
- decreased for those aged 18–24 years from 18.6 per cent in 2002 to 15.2 per cent, whilst other adult age groups did not change significantly over the same period (figure 11.1.1).

Among Aboriginal and Torres Strait Islander Australians in 2014-15, reported rates of alcohol consumption exceeding lifetime risk guidelines were:

- greater for males (23.1 per cent) than for females (8.1 per cent) — both having decreased since 2008 (from 29.7 and 10.2 per cent, respectively) (table 11A.1.1)
- higher in remote areas (21.1 per cent) than other areas, which ranged from 12.0 per cent in major cities to 16.2 per cent in very remote areas (table 11A.1.7).

Single occasion risk

The NHMRC 2009 guidelines advise that, for healthy men and women, drinking no more than four standard drinks on a single occasion reduces the risk of alcohol-related injury arising from that occasion.

Nationally in 2014-15, 30.8 per cent of Aboriginal and Torres Strait Islander Australians reported exceeding the single occasion risk guidelines in the previous two weeks, lower than those reported in 2008 (38.2 per cent) and 2002 (35.1 per cent). A greater proportion of males (40.8 per cent) than females (21.7 per cent) reported exceeding single occasion risk guidelines in the previous two weeks (table 11A.1.1).

The proportion of Aboriginal and Torres Strait Islander Australians aged 15 years and over exceeding single occasion risk was highest in remote areas (39.4 per cent)² (table 11A.1.7).

In 2014-15, a higher proportion of Aboriginal and Torres Strait Islander Australians in non-remote areas (69.6 per cent) reported that alcohol was not a neighbourhood/community problem than in remote areas (36.2 per cent) (section 11.5, table 11A.5.3). Alcohol risk level data by State and Territory, age and non-remote/remote areas are available in tables 11A.1.2–7.

Alcohol related hospitalisations

Data on hospitalisations related to alcohol use are from the AIHW National Hospital Morbidity Database. These data only cover illnesses and conditions directly attributable to alcohol consumption that result in admission to a hospital. They do not include conditions where alcohol may be a contributing factor but where the link is not direct and immediate (various cancers, liver diseases, and chronic gastritis, some suicides and strokes).

For this report, hospitalisations data are presented for the non-Indigenous population from 2012-13 onwards (for prior years the data are presented for ‘other’ which includes non-Indigenous Australians and those for whom Indigenous status is unknown or not stated). Prior to 2010-11, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Aboriginal and Torres Strait Islander

² The difference between remote (39.4 per cent) and outer regional (33.8 per cent) areas was not statistically significant.

identification in hospitalisation data. The attachment tables for this report include hospitalisations data for all jurisdictions for 2012-13 to 2014-15 for Aboriginal and Torres Strait Islander and non-Indigenous Australians, as well as data for the six jurisdictions for 2004-05 to 2014-15 for Aboriginal and Torres Strait Islander and other Australians.

Nationally in 2014-15, the alcohol-related hospitalisation rate for Aboriginal and Torres Strait Islander Australians was 727.8 per 100 000 population (table 11A.1.8). Rates were highest in remote areas (1154.1 per 100 000) and lowest in major cities (566.7 per 100 000) (table 11A.1.11). After adjusting for differences in population age structures, the rate of alcohol-related hospitalisations for Aboriginal and Torres Strait Islander males was four times the rate for non-Indigenous males and the rate for Aboriginal and Torres Strait Islander females was over three times the rate for non-Indigenous females (table 11A.1.9).

In 2014-15, alcohol-related hospitalisations for Aboriginal and Torres Strait Islander Australians were highest for acute intoxication, around 11 times the rate for non-Indigenous Australians (table 11A.1.9). The hospitalisation rate for acute intoxication for Aboriginal and Torres Strait Islander Australians in remote and very remote areas (865.4 per 100 000) was more than three times the rate in major cities (246.6 per 100 000) (table 11A.1.11).

Between 2004-05 and 2014-15, after adjusting for differences in population age structures, for NSW, Victoria, Queensland, WA, SA and the NT combined, the acute intoxication hospitalisation rate for Aboriginal and Torres Strait Islander Australians increased from 5.7 to 11.4 times the rate for other Australians (table 11A.1.10).

Data on hospitalisations related to alcohol use by State and Territory are available in tables 11A.1.13–14.

Alcohol induced deaths

Alcohol is responsible for a considerable burden of death in Australia (NHMRC 2009). Mortality data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Aboriginal and Torres Strait Islander identification and numbers of deaths to support analysis.

For the period 2010–2014, after adjusting for differences in population age structures, for NSW, Queensland, WA, SA and the NT combined, the alcohol-induced death rate for Aboriginal and Torres Strait Islander Australians was 5 times the rate for non-Indigenous Australians (table 11A.1.15).

The majority (around two-thirds) of alcoholic-related deaths for both Aboriginal and Torres Strait Islander and non-Indigenous Australians are from alcoholic liver disease. The rate of deaths from alcoholic liver disease for Aboriginal and Torres Strait Islander females

was 7 times the rate for non-Indigenous females, and for Aboriginal and Torres Strait Islander males it was 4 times the rate for non-Indigenous males (table 11A.1.15).

Alcohol involvement in homicides

The relationship between excessive alcohol consumption, violence, crime and injury is well documented (see section 4.12; Bryant and Willis 2008; Bryant 2009; HREOC 2006; Livingston 2011; Meuleners et al. 2010; Snowball and Weatherburn 2006; Wundersitz 2010). The latest data on alcohol related homicides are for 2013-14, from the Australian Institute of Criminology National Homicide Monitoring Program.

In 2013-14, there were 237 homicide incidents resulting in 247 victims of homicide (section 4.12, tables 4A.12.29 and 4A.12.31). Of the 237 incidents, the Indigenous status of victims and offenders were known in 175 incidents. Among these, 24 homicide incidents involved Aboriginal and Torres Strait Islander Australians as both victims and offenders. In 16 of these incidents (66.7 per cent), both the victim and offender had consumed alcohol at the time of the offence. In comparison, of the 141 homicide incidents involving only non-Indigenous victims and offenders, 23 (16.3 per cent) involved both the victim and offender consuming alcohol (table 11A.1.16).

The number of Aboriginal and Torres Strait Islander homicide incidents fluctuated over the period 1999–2000 to 2013-14. However, the majority of Aboriginal and Torres Strait Islander homicide incidents each year involved alcohol consumption (table 11A.1.16).

Things that work

There is no single solution to the harms associated with alcohol misuse. Moreover, there is a paucity of high quality formal evaluations of interventions of Aboriginal and Torres Strait Islander-specific alcohol misuse (Gray and Wilkes 2010; Wilson et al. 2010). Aboriginal and Torres Strait Islander Australians are aware of the devastating impact of alcohol on their communities and many interventions to address alcohol misuse have been initiated by Aboriginal and Torres Strait Islander Australians themselves. For example, the **Fitzroy Crossing Liquor Restriction** (WA) was highlighted as a case study in previous editions of this report. Another example is the Aboriginal and Torres Strait Islander community in Norseman (WA), where the community became increasingly concerned that heavy alcohol consumption was the main cause of chronic health problems. The Aboriginal and Torres Strait Islander community in Norseman is distributed throughout the township, so the option of declaring themselves dry was not available. However, recognition that certain beverages were particularly associated with heavy drinking led the community to propose restricting the sale of these products (Schineanu, Velandar and Sagers 2010).

An independent mixed method long-term evaluation of the **Norseman Voluntary Liquor Agreement** found there was a significant decrease in rates of burglary, domestic violence

and assaults by Aboriginal and Torres Strait Islander people between the period before the initial restriction (March 2008) and the period after the additional restriction (August 2009). While the total consumption of all recorded beverages, as measured by volume of pure alcohol, did not decline at any point, there were changes in purchasing preferences (Midford, McKenzie and Mayhead 2016). There was agreement that the restrictions should remain in place, but reconsidered in light of changing purchase preferences. The evaluation also recommended a greater focus on social determinants that underpin problematic drinking, particularly education, job skills and employment opportunities (Midford, McKenzie and Mayhead 2016).

Future directions in data

Data on alcohol use are derived from surveys which are limited by sampling, survey administration and questionnaire design and may underestimate actual consumption (Gray and Wilkes 2010; Lee et al. 2014). Results of previous ABS surveys and administrative data collections on use of alcohol and illegal drugs suggest a tendency for respondents to underreport actual consumption levels (ABS 2016), and whilst national surveys may provide a broad indication of the prevalence of alcohol use, any significant regional variation is concealed. Reliable population estimates of alcohol use are fundamental to inform funding and the design of initiatives to prevent and treat harmful use (Lee et al. 2014).

11.2 Drug and other substance use and harm³

Box 11.2.1 Key messages

- In 2014-15, around two-thirds (68.6 per cent) of Aboriginal and Torres Strait Islander adults reported not having used drugs in the previous 12 months (table 11A.2.1).
- The proportion of Aboriginal and Torres Strait Islander adults reporting illicit substance use in the previous 12 months increased from around 23 per cent in all earlier survey periods (2002, 2008 and 2012-13) to 30.8 per cent in 2014-15 (table 11A.2.1). This increase was driven by higher reported non-medical use of 'analgesics and sedatives', by both males (11.3 per cent) and females (14.5 per cent) (figure 11.2.1) and in non-remote areas (table 11A.2.3).
- Between 2004-05 and 2014-15, after adjusting for differences in population age structures, for NSW, Victoria, Queensland, WA, SA and the NT combined, rates of hospitalisation for Aboriginal and Torres Strait Islander Australians increased from 1.4 to 2.3 times the rate for other Australians for drug-related poisoning, and increased from 2.7 to 3.1 times the rate for drug-related mental/behavioural disorders (table 11A.2.10).
- For 2010-2014, after adjusting for differences in population age structures, for NSW, Queensland, WA, SA and the NT combined, the drug-induced death rate for Aboriginal and Torres Strait Islander Australians was 1.9 times the rate for non-Indigenous Australians (table 11A.2.14).
- In 2013-14, a smaller proportion of Aboriginal and Torres Strait Islander homicides had drug involvement (7 out of 24) than non-Indigenous homicides (53 out of 141) (table 11A.2.15).

Box 11.2.2 Measures of drug and other substance use and harm

There is one main measure for this indicator. *Substance use* is defined as the proportion of people aged 18 years and over who reported using illicit substances or misusing licit substances in the previous 12 months. Data are sourced from the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent available data for 2014-15 from the NATSISS (all jurisdictions; sex; age). Data are not available for non-Indigenous Australians or (for the 2004-05 survey) remote areas.

Three supplementary measures are also reported by Indigenous status:

- Drug related hospitalisations (all jurisdictions; sex; remoteness)
- Drug induced deaths (NSW, Queensland, WA, SA and the NT; sex)
- Drug involvement in homicides (national).

The misuse of legal drugs has major negative effects on individuals, families and communities (see section 11.1 'Alcohol consumption and harm' and section 8.4 'Tobacco

³ The Steering Committee notes its appreciation to Dr Kylie Cripps, University of NSW, who reviewed a draft of this section of the report.

consumption and harm'). The use of illicit drugs can affect a person's education, employment and health (including increased illness, disease, accidents and injury). Harmful drug use is associated with family and social disruption, violence and crime (Catto and Thomson 2008, Intergovernmental Committee on Drugs 2014). Property crime, violence, family friction, physical and mental health problems and young people committing suicide are often associated with volatile substance use (Marel, MacLean and Midford 2016). Use of illicit drugs during pregnancy, and associated impacts, is discussed in section 6.2.

In this section, the use of the term 'illicit substance use' refers to use of substances which are illegal to possess (such as heroin) and misuse of substances which are legally available (for example, petrol, glue, paint and prescription drugs). Misuse of legal substances (volatile substance use) can result in sudden death, asphyxiation or neurological and cognitive effects.

Substance use

Nationally in 2014-15, for Aboriginal and Torres Strait Islander Australians aged 15 years and over 30.6 per cent reported⁴ using substances in the 12 months prior to interview (table 11A.2.4). Reported substance use was lower in remote areas (20.9 per cent) than in non-remote areas (33.2 per cent), and higher for males (34.2 per cent) than females (27.3 per cent) (tables 11A.2.5-6). Substance use varied across states and territories (table 11A.2.7).

The rest of this section reports data for Aboriginal and Torres Strait Islander Australians aged 18 years and over (aligned with the NIRA age scope of reporting on rates of current daily smokers and levels of risky alcohol consumption).

In 2014-15, for Aboriginal and Torres Strait Islander adults (in the 12 months prior to interview):

- around two-thirds (68.6 per cent) reported not having used substances
- the proportion reporting illicit substance use increased from 23.1 per cent in 2002 to 30.8 per cent 2014-15
- 'marijuana, hashish or cannabis resin' was the most commonly used illicit drug (19.6 per cent), followed by 'analgesics and sedatives' (13.0 per cent) (table 11A.2.1). This is consistent with the findings from the National Drug Strategy Household Survey, for both the Aboriginal and Torres Strait Islander population and non-Indigenous population — cannabis was the most commonly used illicit drug, followed by illicit use of pharmaceuticals (AIHW 2014).

⁴ Substance use questions were self-completed by respondents in non-remote areas, whereas respondents in remote areas were asked these questions via personal interview.

Figure 11.2.1 Substance use for Aboriginal and Torres Strait Islander adults, by sex^a

^a Relative standard errors and 95 per cent confidence intervals should be considered when interpreting these data, and are available in attachment table 11A.2.2.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2002, 2008, 2014-15; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (NATSIHS component); table 11A.2.2.

In 2014-15, the proportion of Aboriginal and Torres Strait Islander adults reporting illicit substance use in the previous 12 months (30.8 per cent) was higher than in all earlier survey periods (around 23 per cent in 2002, 2008 and 2012-13) (table 11A.2.1). The increase in use was largely driven by higher reported non-medical use of ‘analgesics and sedatives’, by both males (11.3 per cent) and females (14.5 per cent), at 2–3 times the rate of earlier survey periods. The increase was also driven by a doubling of the reported use of ‘amphetamines and speed’ by males (from 3.1 per cent in 2012-13 to 7.0 per cent in 2014-15) (figure 11.2.1). Between 2012-13 and 2014-15, the reported non-medical use of ‘analgesics and sedatives’ tripled across all non-remote areas (from 5.0 per cent to 17.8 per cent in major cities; 4.5 per cent to 16.4 per cent in inner regional areas and 3.7 per cent to 11.9 per cent in outer regional areas) (table 11A.2.3).

Drug related hospitalisations

Data on hospitalisations related to drug use are from the AIHW National Hospital Morbidity Database. These data only cover illnesses and conditions directly attributable to drug use that result in admission to a hospital. They do not include conditions where drug use may be a contributing factor but where the link is not direct and immediate.

For this report, hospitalisations data are presented for the non-Indigenous population from 2012-13 onwards (for prior years the data are presented for ‘other’ which includes non-Indigenous Australians and those for whom Indigenous status is unknown or not stated). Prior to 2010-11, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Aboriginal and Torres Strait Islander identification in hospitalisation data. The attachment tables for this report include hospitalisations data for all jurisdictions for 2012-13 to 2014-15 for Aboriginal and Torres Strait Islander and non-Indigenous Australians, as well as data for the six jurisdictions for 2004-05 to 2014-15 for Aboriginal and Torres Strait Islander and other Australians.

Nationally in 2014-15, the drug-related hospitalisation rate for Aboriginal and Torres Strait Islander Australians:

- was 655.3 per 100 000 population, with similar rates for males and females (table 11A.2.8)
- was highest for mental and behavioural disorders (338.7 per 100 000 population) and poisoning (273.0 per 100 000 population) (table 11A.2.8)
- decreased as remoteness increased, rates in major cities were more than twice those of remote areas (845.3 compared with 384.5 per 100 000 population) (table 11A.2.11).

In 2014-15, after adjusting for differences in population age structures, the hospitalisation rates for Aboriginal and Torres Strait Islander Australians for mental and behavioural disorders and accidental poisoning related to drug use was around three times the rates for non-Indigenous Australians (table 11A.2.9).

Between 2004-05 and 2014-15, after adjusting for differences in population age structures, for NSW, Victoria, Queensland, WA, SA and the NT combined:

- rates of hospitalisation for drug-related poisoning for Aboriginal and Torres Strait Islander Australians increased from 1.4 to 2.3 times the rate for other Australians
- rates of hospitalisation for drug-related mental and behavioural disorders for Aboriginal and Torres Strait Islander Australians increased from 2.7 to 3.1 times the rate for other Australians (table 11A.2.10).

Hospitalisations related to drug use data by State and Territory are available in table 11A.2.13.

Drug induced deaths

Mortality data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Aboriginal and Torres Strait Islander identification and numbers of deaths to support analysis.

For the period 2010–2014, after adjusting for differences in population age structures, for NSW, Queensland, WA, SA and the NT combined, the drug-induced death rate for

Aboriginal and Torres Strait Islander Australians was 1.9 times the rate for non-Indigenous Australians, with the ratio slightly higher for females (2.2:1) compared to males (1.7:1) (table 11A.2.14). Data are available by State and Territory in table 11A.2.14.

Drug involvement in homicides

In 2013-14, there were 237 homicide incidents resulting in 247 victims of homicide (section 4.12, tables 4A.12.29 and 4A.12.31). Of the 237 incidents, the Indigenous status of victims and offenders were known in 175 incidents, among these:

- 24 homicide incidents involved Aboriginal and Torres Strait Islander Australians as both victims and offenders. In five of these incidents, the offender was under the influence of drugs
- 141 homicide incidents involved non-Indigenous Australians as both victims and offenders. Of these incidents, 44 involved the offender under the influence of drugs (of which 18 also involved the victim under the influence of drugs)
- 10 homicide incidents involved a combination of an Aboriginal and Torres Strait Islander Australian and a non-Indigenous Australian as either the victim or the offender. Of these homicides, five involved the offender under the influence of drugs (of which one also involved the victim under the influence of drugs) (table 11A.2.15).

The number of Aboriginal and Torres Strait Islander homicide incidents and the influence of drugs on the victim and/or offender are small and are difficult to interpret. Numbers fluctuated with no clear trend over the period 1999-2000 to 2013-14 (table 11A.2.15).

Things that work

Petrol sniffing remains the most prevalent form of volatile substance use among Aboriginal and Torres Strait Islander Australians in remote communities (Marel, MacLean and Midford 2016). Box 11.2.3 provides an example of how petrol sniffing is being addressed.

Box 11.2.3 Things that work — drug and other substance use and harm

Low aromatic fuel was introduced in the NT and WA in 2006 and has since been introduced in Queensland and SA, to reduce the harmful, risky health behaviour of petrol sniffing, and to prevent associated antisocial behaviour, offending and contact with the criminal justice system. Low aromatic fuel has extremely low levels of aromatics making it less attractive for people to sniff in order to get a 'high'.

The most recent evaluation in 2011–2014 undertaken by the Menzies School of Health and Research found:

- the introduction of low aromatic fuel is linked with a continuing decline in the numbers and frequency of young people sniffing in remote communities

(continued next page)

Box 11.2.3 (continued)

- a reduction of 88 per cent in petrol sniffing across the 17 communities surveyed since 2005–07
- in 17 of the 53 communities surveyed where comparative data were available over time, the total number of people sniffing petrol declined from 647 in 2005–07 to 78 in 2013–14 (d'Abbs and Shaw 2016).

The earlier evaluation emphasised the role of access to services supporting young people to engage in alternative activities that promoted wellbeing (d' Abbs and Shaw 2008 cited in Osborne, Baum and Brown 2013).

Sources: d'Abbs, P. and Shaw, G. 2016, *Monitoring Trends in the Prevalence of Petrol Sniffing in Selected Australian Aboriginal communities 2011–2014: Final Report*, Menzies School of Health Research, NT; d'Abbs, P. and Shaw, G. 2008, *Executive Summary of the Evaluation of the Impact of Opal Fuel*, Commonwealth Department of Health and Ageing; Osborne, K., Baum, F. and Brown, L. 2013, *What works? A review of actions addressing the social and economic determinants of Indigenous health*, Closing the Gap Clearinghouse publication, Issues Paper no. 7 produced for the Closing the Gap Clearinghouse, Australian Institute of Health and Welfare and the Australian Institute of Family Studies, Canberra.

Future directions in data

Data on the use of illicit drugs are derived from surveys which are limited by sampling, survey administration and questionnaire design, and may underestimate actual consumption (Gray and Wilkes 2010; Lee et al. 2014). The sensitive, personal (and sometimes illegal) nature of the behaviours being enquired about may affect respondents' willingness to respond and the nature of the responses. Results of previous ABS surveys and administrative data collections on use of alcohol and illegal drugs suggest a tendency for respondents to underreport actual consumption levels (ABS 2016), and whilst national surveys may provide a broad indication of the prevalence of drug use any significant regional variation is concealed. Reliable population estimates of substance use and dependence are fundamental to inform funding and the design of initiatives to prevent and treat harmful drug use (Lee et al. 2014).

11.3 Juvenile diversions⁵

Box 11.3.1 Key messages

- Diversion of young offenders from the criminal justice system can be a swift and economically efficient response to offending, aimed at reducing reoffending and the negative labelling and stigmatisation of contact with the criminal justice system.
- Rates of diversion from formal criminal justice processes for Aboriginal and Torres Strait Islander young people aged 10–17 years are between two-fifths to two-thirds (0.4 to 0.7 times) the rates for non-Indigenous young people (table 11A.3.2).

Box 11.3.2 Measures of Juvenile diversions

There is one main measure for this indicator. *Juvenile diversions* is defined as the proportion of all alleged young offenders who are diverted from court proceedings (that is, from the formal criminal justice system).

The most recent available data are for 2014-15 (or the 2015 calendar year for some jurisdictions) (NSW, Victoria, Queensland, WA, SA, the NT and the ACT; sex). Data disaggregated by Indigenous status are not available for Tasmania.

Aboriginal and Torres Strait Islander Australians are overrepresented in the criminal justice system, as both victims and offenders. Section 4.11 includes information on child protection and section 4.12 includes information on family and community violence. Section 4.13 includes information on imprisonment and juvenile detention.

Diversion from the youth justice system is a critical factor for addressing the overrepresentation of Aboriginal and Torres Strait Islander young people in the criminal justice system (Stewart et al. 2014). Police cautioning and conferencing processes are swift and economically efficient responses to offending. They are aimed at reducing reoffending and the negative labelling and stigmatisation associated with formal contact with the criminal justice system (see section 11.4 on repeat offending) (Allard et al. 2010; Juodo 2008).

Diversion can occur at any point following initial contact with police — pre-arrest, pre-trial, pre-sentence, post-sentence and pre-release. While diversion involves any process that prevents young people from entering or continuing in the formal criminal justice system, it typically involves pre-court processes such as police cautioning or conferencing (Allard et al. 2010; Juodo 2008; Richards 2010).

Cautioning and conferencing are typically available to first time and non-serious offenders. Sufficient evidence to establish that an offence took place, an admission of guilt and the

⁵ The Steering Committee notes its appreciation to Dr Kyllie Cripps, University of NSW, who reviewed a draft of this section of the report.

young person's consent to engage in the cautioning or conferencing process is required for a diversion to occur (Allard et al. 2010).

Two research studies (on young people who had contact with the youth justice system in NSW, WA, SA; and Queensland) found that, even after controlling for the effects of age, sex, offence type and offending history, Aboriginal and Torres Strait Islander young offenders were less likely than non-Indigenous young offenders to be diverted (Snowball (2008) and Allard et al (2010) cited in Richards (2010)). However, a number of other factors which could not be assessed may explain at least some of this difference, such as whether the young person was willing to plead guilty (a requirement for eligibility for diversion).

State and Territory governments have individual responsibility for youth diversions (table 11A.3.1 outlines the relevant legislation for each jurisdiction). In each jurisdiction except Queensland, a youth is defined as a person aged 10 to 17 years (in Queensland, a youth is defined as a person aged 10 to 16 years). Children under 10 years of age cannot be held legally responsible for their actions (Richards 2011). Differences in programs and data collection mean that data are not comparable across jurisdictions.

For the most recent year of reporting, rates of diversions for Aboriginal and Torres Strait Islander young people are between two-fifths to two-thirds (0.4 to 0.7 times) the rates for non-Indigenous young people. Within most jurisdictions, proportions of juvenile offenders being diverted have fluctuated over time (table 11A.3.2).

New South Wales

New South Wales data are from police records and represent persons of interest — alleged offenders who have come to the attention of NSW Police for a recorded criminal incident. Data in previous reports were reported on a different counting methodology and should not be compared with data in this report.

In 2015 (excluding infringement notices), 27.9 per cent of Aboriginal and Torres Strait Islander alleged young offenders received a diversion by police, this is half the rate of non-Indigenous alleged young offenders receiving a diversion (60.6 per cent) (table 11A.3.2). Rates were relatively steady between 2004 and 2015 (table 11A.3.3).

For Aboriginal and Torres Strait Islander alleged young offenders who were diverted, the most common type of offence was 'theft' (28.7 per cent). For non-Indigenous alleged offenders, the greatest proportion of diversions were for the offence of 'transport regulatory offences' (52.4 per cent) followed by theft (12.3 per cent) (table 11A.3.6).

Victoria

Indigenous status data are based on responses to the ABS Standard Indigenous Question when asked by Victoria Police. Victorian data in previous reports were reported on a different basis and should not be compared with data in this report.

In 2014-15, 14.0 per cent of Aboriginal and Torres Strait Islander alleged young offenders were formally cautioned, around two-fifths the rate of non-Indigenous alleged young offenders (35.1 per cent) (table 11A.3.2). The diversion rate for Aboriginal and Torres Strait Islander alleged young offenders has fluctuated between 14.0 per cent and 25.2 per cent in the time period between 2004-05 and 2014-15 (table 11A.3.7). The diversion rate for non-Indigenous alleged young offenders has declined from a high of 47.1 per cent in 2006-07 to 35.1 per cent in 2014-15 (table 11A.3.7).

In 2014-15, the most common type of offence for both Aboriginal and Torres Strait Islander alleged young offenders and non-Indigenous alleged young offenders was 'property and deception offences' (around 60 per cent) followed by 'offences against the person' (around 25 per cent) (table 11A.3.9). Data by sex and offence type are available in table 11A.3.8 and historical data by type of offence in tables 11A.3.10–19.

Queensland

In 2014-15, 24.1 per cent of Aboriginal and Torres Strait Islander alleged young offenders were cautioned or had a community conference (table 11A.3.2). The diversion rate for Aboriginal and Torres Strait Islander alleged young offenders has fluctuated between 24.0 per cent and 32.0 per cent in the period between 2006-07 and 2014-15 (table 11A.3.20). The diversion rate for non-Indigenous alleged young offenders has decreased from 57.6 per cent in 2006-07 to 44.5 per cent in 2014-15 (table 11A.3.20).

In 2014-15, for all alleged young offenders, the most common types of offence continues to be offences against property including 'unlawful entry' and 'theft' (66.5 per cent for Aboriginal and Torres Strait Islander, and 50.5 per cent for non-Indigenous, alleged young offenders) (table 11A.3.21–29).

Western Australia

In 2014-15, 38.0 per cent of Aboriginal and Torres Strait Islander alleged young offenders were diverted through caution or transferred to a Juvenile Justice Team, compared with 54.7 per cent of non-Indigenous alleged young offenders (table 11A.3.2). The diversion rate for Aboriginal and Torres Strait Islander alleged young offenders has fluctuated between 29.5 per cent and 40.5 per cent in the seven years of reporting from 2008-09. The diversion rate for non-Indigenous alleged young offenders has steadily decreased from 59.9 per cent in 2008-09 to 54.7 per cent in 2014-15 (table 11A.3.30). Data by sex and offence type are available in table 11A.3.31.

South Australia

In 2015, 28.8 per cent of Aboriginal and Torres Strait Islander alleged young offenders were diverted through formal caution or transfer to family conference, compared with 46.7 per cent for non-Indigenous alleged young offenders (table 11A.3.2). The difference between Aboriginal and Torres Strait Islander and non-Indigenous youth diversions has remained similar since 2008 at around 20 percentage points (table 11A.3.32).

In 2015, the most common types of offences for both Aboriginal and Torres Strait Islander and non-Indigenous alleged young offenders was 'breach of custodial/community orders', 'theft', 'property damage and environmental pollution' and 'unlawful entry with intent/burglary', accounting for half of all offences (table 11A.3.34). Data by sex and offence type are available in table 11A.3.33 and historical data by type of major offence in tables 11A.3.35–41.

Australian Capital Territory

In the ACT, the proportion of youth diversions has been calculated on total recorded police contacts with young people, which includes youth cautions, referrals to diversionary conferencing, young people taken into protective custody and charges pertaining to young people.

In 2014-15, 16.1 per cent of Aboriginal and Torres Strait Islander alleged young offenders were diverted, compared with 42.8 per cent of non-Indigenous alleged young offenders (table 11A.3.2). Data on diversions by sex are available in table 11A.3.42.

Northern Territory

Northern Territory police data refer to apprehension cases rather than individual persons, and several cases can relate to the same offender. The Youth Justice Act places a limit of two referrals to diversion. If a youth is not complying with the provisions of the diversion, the matter is referred for prosecution through court (NTFES 2015).

In 2015, 32.6 per cent of Aboriginal and Torres Strait Islander alleged young offenders were diverted, compared with 47.9 per cent of non-Indigenous alleged young offenders (table 11A.3.2). The diversion rate for Aboriginal and Torres Strait Islander alleged young offenders has fluctuated between 24.9 per cent and 43.2 per cent in the period between 2002 to 2015 (table 11A.3.43).

Of the 1766 Aboriginal and Torres Strait Islander alleged youth offenders, 1098 (62.2 per cent) were denied diversion as a result of the seriousness of the offence or reoffending and 92 (5.2 per cent) declined to participate in diversion (table 11A.3.44).

In 2015, the most common offence type for Aboriginal and Torres Strait Islander alleged young offenders was ‘crime against property’ accounting for around three-quarters of all offences (table 11A.3.45).

Things that work

A program that has engaged Aboriginal and Torres Strait Islander alleged young offenders is described in box 11.3.3.

Box 11.3.3 Things that work — juvenile diversions

The **Tiwi Islands Youth Development and Diversion Unit (TIYDDU)** (NT) based in Wurrumiyanga has been operating since 2003. The program provides a 12-week diversion program engaging Tiwi youth (typically first-time youth offenders) in prevention activities that aim to benefit the offender, the victim and the community. The care and support provided to the young people recognises, integrates, and shows respect for Tiwi value and social and cultural authority. Community members were involved in its design and play an important role in its ongoing implementation (Stewart et al 2014; CTGCH 2014).

An independent evaluation of the TIYDDU, conducted in 2011 by the Australian Institute of Criminology (Stewart et al 2014), found it was effective in reducing adverse contact between Tiwi youth and the criminal justice system. Individual re-offence data from NT Police for program participants showed that 20 per cent of participants (13 of 65 young people) had contact with the police for alleged offences in the year following commencement with the program — below what would be expected for this population without the intervention. Data are not available for comparisons with youth that did not participate in the program during this time, and further assessment of the outcomes from this program by comparing with a similar group who did not participate would be desirable.

Qualitative data (based on interviews with program staff, participants, community members and representatives of agencies with which TIYDDU collaborates) found the program was useful in reconnecting young people to cultural norms, was culturally ‘competent’ and directly addressed the factors that contribute to offending behaviour, such as substance misuse, boredom and disengagement from work or education. School attendance data for individuals were requested but unable to be provided due to confidentiality and small numbers.

Future directions in data

Comparable and complete national data are yet to become available to illustrate the nature or level of diversion undertaken by Australian jurisdictions. Whilst data are collected on alleged offenders in the ABS Recorded Crime Offenders collection, the data quality for diversions by Indigenous status is currently not sufficient for national reporting purposes. The Aboriginal and Torres Strait Islander status of an alleged offender is based on

self-identification by the individual who comes into contact with police. Aboriginal and Torres Strait Islander identification is difficult to ascertain where police proceed by way of a penalty/infringement notice, as this method does not usually provide an opportunity for police to ask individuals to self-identify (ABS unpublished).

To assist in explaining the differences in diversion rates between Aboriginal and Torres Strait Islander and non-Indigenous youth, information is also required on whether alleged offenders were denied diversion due to not meeting eligibility criteria, availability of diversion programs or declining to participate in diversion.

11.4 Repeat offending⁶

Box 11.4.1 Key messages

- Repeat offending and re-incarceration are significant contributors to the overrepresentation of Aboriginal and Torres Strait Islander Australians in the youth justice and criminal justice systems.
- Nationally on 30 June 2015, 77.2 per cent of Aboriginal and Torres Strait Islander prisoners and 50.4 per cent of non-Indigenous prisoners had a known prior imprisonment. These proportions have remained relatively unchanged over the last 15 years (figure 11.4.1).
- A higher proportion of Aboriginal and Torres Strait Islander male prisoners (78.1 per cent) than Aboriginal and Torres Strait Islander female prisoners (68.9 per cent) had experienced prior adult imprisonment (table 11A.4.2).
- In 2014-15, 52.8 per cent of Aboriginal and Torres Strait Islander young people returned to youth justice supervision, similar to 2013-14 and 1.6 times the rate of non-Indigenous young people (table 11A.4.5).
- In NSW, Queensland, SA, ACT and the NT in 2014-15, 30 to 49 per cent of Aboriginal and Torres Strait Islander offenders were proceeded against by police on more than one occasion, compared with 15 to 31 per cent of non-Indigenous offenders (table 11A.4.7).

Box 11.4.2 Measures of repeat offending

There is currently no systematic national definition and data collection of repeat offending. This section focuses on the re-incarceration aspect of repeat offending. There are two main measures for this indicator.

- *Adult re-imprisonment* is defined as the proportion of prisoners currently under sentence with known prior adult imprisonment
- *Youth returns to sentenced supervision* is defined as the proportion of young people who return to sentenced supervision.

The most recent available data for adult re-imprisonment are from the ABS Prisoners in Australia collection for 30 June 2015 (all jurisdictions; sex). The most recent available data for returns to sentenced supervision are from the AIHW Juvenile Justice National Minimum Dataset 2014-15 (national).

A supplementary measure on the proportion of offenders who were proceeded against by police on more than one occasion is also reported (NSW, Queensland, SA, ACT and the NT; age; sex).

This section focuses on repeat offending. Imprisonment and juvenile detention are covered under section 4.13. Juvenile diversions are covered under section 11.3.

⁶ The Steering Committee notes its appreciation to Dr Kyllie Cripps, University of NSW, who reviewed a draft of this section of the report.

Repeat offending or recidivism refers to repetitious criminal activity. Repeat offending and re-incarceration are significant contributors to the overrepresentation of Aboriginal and Torres Strait Islander Australians in the youth justice and criminal justice systems (CTGCH 2013; Snowball and Weatherburn 2006). A reduction in the number of repeat offenders can have a significant effect on the overall volume of juvenile contacts with the criminal justice system (Lind 2011). Modest reductions in the rate at which offenders are re-imprisoned would result in substantial savings in prisoner numbers and correctional outlays (Weatherburn et al. 2009).

Many factors contribute to the re-offending behaviour of an individual. Demographic characteristics such as age, sex and Indigenous status are significant predictors of re-offending (Lind 2011; Ringland, Weatherburn and Poynton 2015). Situational factors such as substance abuse, family problems, peer delinquency and school related problems (levels of school attendance/truancy, or suspension or expulsion) have also been found to be significant predictors of re-offending (Ringland, Weatherburn and Poynton 2015), which are generally more prevalent for Aboriginal and Torres Strait Islander than non-Indigenous Australians (see for example, sections 4.5, 4.11, 11.1 and 11.2).

Common reasons for Aboriginal and Torres Strait Islander prisoners' return to custody whilst on parole include breaching parole conditions, committing further offences, lack of employment, lack of housing, substance abuse and domestic violence (Apted, Hew and Sinha 2013).

The true level of repeat offending is underestimated, as not all offences are necessarily detected or recorded by police, and court convictions do not necessarily result in contact with corrective services (Payne 2007; Richards 2011). Repeat offending can also be overestimated as an offender on remand will not necessarily be convicted and sentenced for a particular offence (Payne 2007).

Adult re-imprisonment

In the absence of actual re-offending data, studies use criminal justice data and define repeat offending as re-apprehension, re-conviction or re-imprisonment. Re-imprisonment is the most serious outcome of the criminal justice process and research has found that the strongest predictor of a return to prison was the number of prior imprisonment terms (Wundersitz 2010).

Nationally on 30 June 2015, 77.2 per cent of Aboriginal and Torres Strait Islander prisoners and 50.4 per cent of non-Indigenous prisoners had a known prior imprisonment. These proportions have remained relatively unchanged over the past 15 years (figure 11.4.1).

Figure 11.4.1 **Proportion of prisoners with known prior adult imprisonment under sentence, at 30 June^a**

^a In 2005, data were not available for the ACT and for a National total.

Source: ABS (2015) *Prisoners in Australia, 2015*, Cat. no. 4517.0; table 11A.4.1.

Nationally, the proportion of Aboriginal and Torres Strait Islander male (78.1 per cent) and female (68.9 per cent) prisoners with known prior adult imprisonment was 1.5 and 1.8 times that of non-Indigenous male (51.3 per cent) and female (39.3 per cent) prisoners (table 11A.4.2).

Youth returns to sentenced supervision

Most young people who have a supervised sentence⁷ have only one, and never return to sentenced youth justice supervision. However, 26.8 per cent of Aboriginal and Torres Strait Islander young people who had initially been sentenced to community-based supervision and 41.8 per cent of those initially sentenced to detention had received a total of 5 or more supervised sentences before they turned 18 years of age (AIHW 2015, AIHW 2016). Data are presented for returns over three time frames:

- in 2014-15, during the entire time for which a young person is eligible to return to *youth justice supervision*, 52.8 per cent of Aboriginal and Torres Strait Islander young people returned to sentenced supervision, similar to 2013-14 and 1.6 times the rate of non-Indigenous young people (table 11A.4.5)

⁷ There are two types of supervised sentences: supervised community-based sentence and sentence of detention. The two combined are referred to as sentenced youth justice supervision.

-
- within 12 months of release from *detention* — in 2014-15, Aboriginal and Torres Strait Islander young males returned to detention (78.7 per cent) at a similar rate as non-Indigenous young males (76.7 per cent). A greater proportion of Aboriginal and Torres Strait Islander young females returned to detention (56.3 per cent) than non-Indigenous females (42.1 per cent) similar to patterns in 2013-14 (table 11A.4.6)
 - data are available on returns within 6 months, but are subject to fluctuation. In 2014-15, Aboriginal and Torres Strait Islander young people returned to community-based supervision at 1.5 times the rate of non-Indigenous young people (table 11A.4.6).

Offenders proceeded against more than once by police

People first enter the justice system when they are investigated by police for allegedly committing an offence. They may be proceeded against by police — have a legal action against them — via court actions or non-court actions. An offender can be proceeded against by police multiple times during a given period.

Comparable data are available for NSW, Queensland, SA, ACT and the NT. In 2014-15, for these five jurisdictions, 30 to 49 per cent of Aboriginal and Torres Strait Islander offenders were proceeded against by police on more than one occasion, compared with 15 to 31 per cent of non-Indigenous offenders (table 11A.4.7). Aboriginal and Torres Strait Islander offenders proceeded against by police were younger than non-Indigenous offenders for both males and females in NSW, Queensland, SA and for males in the ACT and NT (table 11A.4.8).

Things that work

The Standing Committee on Social Issues (2008) found that a major factor leading to recidivism was the lack of suitable support available to ex-offenders attempting to integrate themselves into society. Services that aim to support Aboriginal and Torres Strait Islander offenders who have experienced imprisonment can enhance rehabilitative outcomes and the reintegration process, by helping offenders remain in contact, and involved, with the community. These services can include; visits by elders, contact with community liaison officers, official Aboriginal and Torres Strait Islander visitors and access to chaplains (including specified Aboriginal and Torres Strait Islander chaplains) (Willis and Moore 2008).

Diversion programs aim to reduce reoffending and reduce dependency on drugs and alcohol in view of their large contribution to offending (and reoffending) (CTGCH 2013). Box 11.4.3 describes an example of a diversion program that has shown reductions in recidivism.

Box 11.4.3 Things that work — repeat offending

In NSW, the **Magistrates Early Referral into Treatment (MERIT)** drug diversion program provides adult defendants in local courts with the option of undertaking formal drug treatment while on bail. The program is available in 65 local courts across NSW covering around 80 per cent of defendants. Participation in the program is voluntary. In 2009, approximately 19 per cent of MERIT participants were Aboriginal and/or Torres Strait Islander (Howard and Martire 2012).

MERIT is a tailored, case management program that diverts defendants with demonstrable drug problems to an intensive three-month drug treatment program, and occurs prior to sentencing. Lulham (2009) compared a cohort of 2396 defendants who participated in the MERIT program in the two years to 30 June 2005 (18 per cent Aboriginal and Torres Strait Islander) with a comparison group of defendants (15 per cent Aboriginal and Torres Strait Islander) and found that completion of the program reduced reoffending by 12 per cent over a two-year follow-up period. No comparable decline was noted among those who failed to complete the program.

Whilst an audit by the NSW Auditor-General in 2007-08 agreed that the MERIT program was suitable for Aboriginal and Torres Strait Islander defendants, it found that they faced issues with access to, and completion of, the MERIT program. An Aboriginal Practice Checklist to improve access was developed and trialled by seven MERIT teams in 2006. Whilst completion rates for Aboriginal and Torres Strait Islander defendants in these areas increased from 55 to 73 per cent, the Checklist has not been implemented by all MERIT teams (Public Accounts Committee 2010).

MERIT program also cited in (CTGCH 2013), *Diverting Indigenous offenders from the criminal justice system*, Resource sheet no. 24 produced for the Closing the Gap Clearinghouse; NIDAC (2012), *An economic analysis for Aboriginal and Torres Strait Islander offenders Prison vs residential treatment*, Australian National Council on Drugs research paper 24, Canberra.

Future directions in data

There is no systematic national definition or data collection which provides information about the prevalence of prior detention among juvenile detainees. The Australasian Juvenile Justice Administrators is overseeing several research projects to develop national youth justice policy, research and data capabilities. The Australian Bureau of Statistics is working with corrective services agencies to explore ways to improve prisoner flow data to build a more accurate picture of incarceration. There also needs to be more rigorous evidence of effectiveness and evaluation of efforts to reduce imprisonment.

11.5 Community functioning⁸

Box 11.5.1 Key messages

- Community functioning is defined as the ability and freedom of community members and communities to determine the context of their lives and to translate their capabilities into positive actions towards a valued life.
- Themes important to community functioning are: connectedness to country, land and history, culture and identity; resilience; leadership; having a role, structure and routine; feeling safe; and vitality. Whilst there is no overall measure of community functioning, considering outcomes across the six themes builds an overall picture.

Box 11.5.2 Measures of community functioning

There is no main measure for this indicator. Community functioning is a complex concept and includes analysis of a range of factors. Descriptors and findings are reported for:

- the six themes of community functioning
- selected variables contributing to each community functioning theme.

Themes and findings are drawn from the work undertaken for the Australian Health Ministers' Advisory Council Aboriginal and Torres Strait Islander Health Performance Framework (ATSIHPF). The most recent available data are from the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS) for 2014-15 (national; remoteness).

Community functioning is defined as the ability and freedom of community members and communities to determine the context of their lives (physical, social, cultural, spiritual and organisational) and to translate their knowledge, skills, and understanding (capabilities) into positive actions towards a valued life (AIHW 2015; OATSIH 2004). The conversion of capabilities into functioning is influenced by the values and personal characteristics of individuals, families and communities, and the environment in which they live. Different cultures will give greater or lesser priority to different aspects of functioning (AHMAC 2012, 2015). Aboriginal and Torres Strait Islander understandings of community and community functioning differ from Western understandings (Taylor et al. 2011). Community functioning for Aboriginal and Torres Strait Islander Australians should be assessed within a framework that reflects their values.

Workshops led by Aboriginal facilitators, on behalf of the work program for the ATSIHPF report⁹, developed the concept of community functioning with Aboriginal and Torres Strait Islander Australians in 2008 and 2010. Participants identified a number of key themes and weighted these according to their relative value (table 11.5.1). The multiple constructs in

⁸ The Steering Committee notes its appreciation to Dr Kyllie Cripps, University of NSW, who reviewed a draft of this section of the report.

⁹ This work program was based in the Department of Health until 2013, and is now based in the Department of the Prime Minister and Cabinet.

combination build an overall picture of community functioning for Aboriginal and Torres Strait Islander Australians.

Table 11.5.1 Themes contributing to community functioning

<i>Measure of functioning/ Weight (per cent)</i>	<i>Descriptor</i>
Connectedness to country, land and history, culture and identity (25 per cent)	<ul style="list-style-type: none"> • Being connected to country, land, family and spirit • Strong and positive social networks with Aboriginal and Torres Strait Islander Australians • Strong sense of identity and being part of a collective (knowing where you are from, who is your family) • Sharing; giving and receiving; trust; love; looking out for others • Engaged/communicative
Resilience (20 per cent)	<ul style="list-style-type: none"> • Coping with the internal and external world • Power to control choices and options • Ability to proceed in public without shame • Optimising what you have • Challenge injustice and racism, stand up when required • Cope well with difference, flexibility and accommodating • Ability to walk in two worlds • Engaged in decision making • External social contacts
Leadership (20 per cent)	<ul style="list-style-type: none"> • Strong elders in family and community, both male and female • Role models, both male and female • Strong direction, vision • The 'rock', someone who has time to listen and advise
Having a role, structure and routine (15 per cent)	<ul style="list-style-type: none"> • Having a role for self: participation, contributing through paid and unpaid roles • Capabilities and skills derived through social structures and experience through non-formal education • Knowing boundaries and acceptable behaviours • Sense of place — knowing your place in family and society • Being valued and acknowledged • Disciplined
Feeling safe (10 per cent)	<ul style="list-style-type: none"> • Lack of physical and lateral violence • Safe places • Emotional security • Cultural competency • Relationships that can sustain disagreement
Vitality (10 per cent)	<ul style="list-style-type: none"> • Community infrastructure • Access to services • Education • Health • Income • Employment

Findings for community functioning themes

A summary of key findings using data from the 2014-15 NATSISS is outlined for each community functioning theme. Further survey results of selected variables contributing to community functioning themes are available in table 11A.5.1, with 2002 and 2008 data reported where comparable. Data by remoteness areas are in table 11A.5.3 for 2014-15 and table 11A.5.6 for 2008.

Connectedness to country, land and history, culture and identity

Nationally in 2014-15, for Aboriginal and Torres Strait Islander Australians:

- 74.1 per cent recognised their homelands, similar to 71.7 per cent in 2008 and 70.0 per cent in 2002. A higher proportion of Aboriginal and Torres Strait Islander Australians in remote (83.9 per cent) and very remote (90.8 per cent) areas recognised homelands compared to those in major cities (67.4 per cent)
- 62.3 per cent identified with a clan or language group, similar to 62.1 per cent 2008
- 94.6 per cent had contact with family or friends outside the household at least once per week, similar to 94.0 per cent in 2008
- 82.4 per cent had friends to confide in
- 89.7 per cent feel able to have a say with family and friends, some or more of the time. A higher proportion of Aboriginal and Torres Strait Islander Australians in major cities (91.4 per cent) felt able to have a say compared to those in remote (87.6 per cent) and very remote areas (83.8 per cent) (tables 11A.5.1 and 11A.5.3).

Refer to sections 5.1 ‘Valuing Indigenous Australians and their cultures’, 5.7 ‘Participation in community activities’ and 5.8 ‘Access to traditional lands and waters’ for further information.

Resilience

Nationally in 2014-15, for Aboriginal and Torres Strait Islander Australians:

- 85.9 per cent did not avoid situations due to past unfair treatment
- 89.4 per cent felt they were able to find general support from outside the household
- 59.1 per cent had provided support to someone outside their household in the last four weeks
- 80.8 per cent agreed their doctor could be trusted and 70.4 per cent agreed that the local school could be trusted. A higher proportion of Aboriginal and Torres Strait Islander Australians in major cities (83.3 per cent) felt their doctor could be trusted compared to those in remote (79.9 per cent) and very remote areas (76.2 per cent), with the direction

reversed for trust in their local school (72.7 per cent in remote areas and 81.9 per cent in very remote areas, compared to 67.9 per cent in major cities)

- 19.9 per cent had involvement with an Aboriginal or Torres Strait Islander organisation, similar to 18.2 per cent 2008
- 96.9 per cent of adults participated in sport/social/community activities in the last 12 months (tables 11A.5.1 and 11A.5.3).

Refer to sections 5.1 ‘Valuing Indigenous Australians and their cultures’ and 5.7 ‘Participation in community activities’ for further information.

Leadership

Nationally in 2014-15, for Aboriginal and Torres Strait Islander Australians:

- 43.8 per cent of children aged 4–14 years had spent time with an Aboriginal or Torres Strait Islander leader or elder in the last week (table 11A.5.1).

Refer to section 5.4 ‘Case studies in governance’ for further general information on leadership and governance.

Having a role, structure and routine

Nationally in 2014-15, for Aboriginal and Torres Strait Islander Australians:

- 77.1 per cent had lived in only one dwelling in the last 12 months or longer
- 95.5 per cent of children aged 0–14 years had participated in informal learning activities with their main carer in the last week (table 11A.5.1).

Feeling safe

Nationally in 2014-15, for Aboriginal and Torres Strait Islander Australians:

- 77.7 per cent had not experienced physical and/or threatened violence in the last 12 months, similar to 75.3 per cent in 2008
- 84.0 per cent felt safe at home alone after dark
- 54.3 per cent of children aged 2–14 years were taught Indigenous culture at school
- 96.8 per cent had not been incarcerated in the last five years (91.2 per cent had never been incarcerated in their lifetime) (table 11A.5.1).

Vitality

- 55.0 per cent had no disability or (restrictive) long-term health condition

- 66.4 per cent had low/moderate level of psychological distress
- 75.3 per cent could easily get to places needed, similar to 73.8 per cent 2008 (table 11A.5.1).

Refer to sections 5.3 ‘Engagement with services’, 4.3 ‘Early childhood education’, 4.4 ‘Reading, writing and numeracy’, 4.6 ‘Year 12 attainment’, 4.7 ‘Employment’, 4.8 ‘Post-secondary education’, 4.9 ‘Disability and chronic disease’, 4.10 ‘Household and individual income’, and chapter 8 ‘Healthy lives’ for further information on factors connected to vitality.

Things that work

Box 11.5.3 provides an example of a cultural healing program that has been found to increase the capacity of participants to exert greater control over their health and wellbeing.

Box 11.5.3 Things that work — community functioning

The **Family Wellbeing Program** was developed in 1993 by Adelaide-based Aboriginal and Torres Strait Islander Australians and was originally delivered at a community level, where Aboriginal people could come together over lunch and discuss issues and learn to cope with grief and loss in new ways. Through the action of grassroots community networks, the program has transferred to 56 sites across most states and territories, to more than 3300 participants, 91 per cent of whom were Aboriginal and Torres Strait Islander Australians (Monson-Wilbraham 2015). The central objective of Family Wellbeing is to develop people’s skills and capacity to move from a position of disempowerment to empowerment. It is a cultural healing program that aims to enhance participants’ awareness, resilience and problem-solving ability, to improve their sense of wellbeing and to help others (Tsey and Every 2000). The program is now an accredited six-month Certificate II in Family Wellbeing course delivered by TAFE SA, Batchelor Institute of Indigenous Tertiary Education (NT) and James Cook University (Queensland) (Monson-Wilbraham 2015). The qualification is an education and counselling skills program focused on dealing with grief, loss and family violence (Tsey and Every 2000).

A synthesis of seven formative evaluations of the program, which involved a total of 148 adult and 70 student participants, concluded that it increased the capacity of participants to exert greater control over their health and wellbeing (Tsey et al. 2010 cited in CTGCH 2013). (However, there was no evidence presented of positive changes occurring at the broader, community level.)

Future directions in data

Data required to inform the findings for community functioning themes are only available every six years. There is no main measure for this indicator and no single national quantitative measure that demonstrates the strengths and capabilities of Aboriginal and Torres Strait Islander Australian families and communities.

11A.1 Alcohol consumption and harm

- Table 11A.1.1** Alcohol risk levels, Aboriginal and Torres Strait Islander persons aged 15 years and over, by sex, Australia (crude rates) 2002, 2008 and 2014-15
- Table 11A.1.2** Alcohol risk levels, Aboriginal and Torres Strait Islander persons, by non-remote/remote, by sex, Australia (crude rates) 2014-15
- Table 11A.1.3** Alcohol risk levels, Aboriginal and Torres Strait Islander persons, by age, Australia (crude rates) 2002, 2008 and 2014-15
- Table 11A.1.4** Alcohol risk levels, Aboriginal and Torres Strait Islander persons, by non-remote/remote, by age, Australia (crude rates) 2014-15
- Table 11A.1.5** Alcohol risk levels, Aboriginal and Torres Strait Islander persons aged 15 years and over (crude rates), State and Territory, 2002, 2008 and 2014-15
- Table 11A.1.6** Alcohol risk levels, Aboriginal and Torres Strait Islander persons aged 15 years and over (crude rates), by non-remote/remote, State and Territory, 2014-15
- Table 11A.1.7** Alcohol risk levels, Aboriginal and Torres Strait Islander persons aged 15 years and over (crude rates), by remoteness, Australia, 2014-15
- Table 11A.1.8** Hospital separations related to alcohol use (number and crude rate per 100 000 population), Aboriginal and Torres Strait Islander persons, by sex, Australia, 2012-13 to 2014-15
- Table 11A.1.9** Hospital separations related to alcohol use (age standardised rate per 100 000 population), by sex, Australia, 2012-13 to 2014-15
- Table 11A.1.10** Hospital separations related to alcohol use (age standardised rate per 100 000 population), NSW, Victoria, Queensland, WA, SA and public hospitals in the NT, 2004-05 to 2014-15
- Table 11A.1.11** Hospital separations related to alcohol use, Aboriginal and Torres Strait Islander persons (numbers and crude rate per 100 000), by remoteness areas, Australia, 2012-13 to 2014-15
- Table 11A.1.12** Hospital separations related to alcohol use (age standardised rate per 100 000), by remoteness areas, Australia, 2012-13 to 2014-15
- Table 11A.1.13** Hospital separations related to alcohol use, Aboriginal and Torres Strait Islander persons (number and crude rate per 100 000 population), by State and Territory, 2012-13 to 2014-15
- Table 11A.1.14** Hospital separations related to alcohol use (age standardised rate per 100 000 population), by State and Territory, 2012-13 to 2014-15
- Table 11A.1.15** Deaths related to alcohol use (age standardised rate per 100 000), by sex, by Indigenous status, NSW, Queensland, WA, SA and the NT, 2010-2014
- Table 11A.1.16** Alcohol involvement in Aboriginal and Torres Strait Islander and non-Indigenous homicide incidents 1999-2000 to 2013-14

11A.2 Drug and substance use and harm

- Table 11A.2.1** Substance use for Aboriginal and Torres Strait Islander people aged 18 years and over, by substance used, Australia, 2002, 2004-05, 2008, 2012-13 and 2014-15
- Table 11A.2.2** Substance use for Aboriginal and Torres Strait Islander people aged 18 years and over, by sex, by substance used, 2002, 2008, 2012-13 and 2014-15
- Table 11A.2.3** Substance use for Aboriginal and Torres Strait Islander people aged 18 years and over, by remoteness areas, by substance used, 2002, 2004-05, 2008, 2012-13 and 2014-15
- Table 11A.2.4** Aboriginal and Torres Strait Islander people (aged 15 years and over) reporting substance use in the last 12 months, by age and sex, 2014-15
- Table 11A.2.5** Substance use for Aboriginal and Torres Strait Islander people aged 15 years and over, by remote/non-remote, by substance used, 2014-15

Attachment contents

Table 11A.2.6	Substance use for Aboriginal and Torres Strait Islander people (aged 15 years and over), by sex, by substance used, 2014-15

Exceeded lifetime risk guidelines (e)	%	2.6	2.7	2.6	1.6	1.5	1.3	1.7	1.5	1.4

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) Data exclude not stated responses.

(c) Abstained is defined as those who did not drink alcohol in the previous 12 months or persons who drink one day a year or less.

(d) Risk level calculated on exceeding the National Health and Medical Research Council (NHMRC) Australian Alcohol Guidelines 2009. For short-term/single occasion risk this is 5 or more standard drinks on any day over last 2 weeks. Guideline 2: For healthy men and women, drinking no more than four standard drinks on a single occasion reduces the risk of alcohol related injury arising from that occasion.

(e) Risk level calculated on exceeding the NHMRC Australian Alcohol Guidelines 2009. For lifetime risk this is more than 2 standard drinks on any day. Guideline 1: For healthy men and women, drinking no more than two standard drinks on any day reduces the lifetime risk of harm from alcohol-related disease or injury.

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Estimates with a relative standard error of 25 per cent to 50 per cent should be used with caution; estimates with a relative standard error greater than 50 per cent (reported as np) are considered too unreliable for general use.

(b) Data exclude not stated responses.

(c) Abstained is defined as those who did not drink alcohol in the previous 12 months or persons who drink one day a year or less.

(d) Risk level calculated on exceeding the National Health and Medical Research Council (NHMRC) Australian Alcohol Guidelines 2009. For short-term/single occasion risk this is 5 or more standard drinks on any day over last 2 weeks. Guideline 2: For healthy men and women, drinking no more than four standard drinks on a single occasion reduces the risk of alcohol related injury arising from that occasion.

(e) Risk level calculated on exceeding the NHMRC Australian Alcohol Guidelines 2009. For lifetime risk this is more than 2 standard drinks on any day. Guideline 1: For healthy men and women, drinking no more than two standard drinks on any day reduces the lifetime risk of harm from alcohol-related disease or injury.

TABLE 11A.1.8

Table 11A.1.8 **Hospital separations related to alcohol use (number and crude rate per 100 000 population), Aboriginal and Torres Strait Islander persons, by sex, Australia, 2012-13 to 2014-15 (a), (b), (c), (d)**

	<i>Number</i>			<i>Crude rate per 100 000 (e)</i>		
	<i>Males</i>	<i>Females</i>	<i>Persons (f)</i>	<i>Males</i>	<i>Females</i>	<i>Persons (f)</i>
(a)	ICD-10-AM codes F10, K70, K75 and T51 based on principal diagnosis. External cause codes X45, X65 and Y15 based on any external cause reported. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).					
(b)	Categories may not add to total as there may be overlap between principal diagnosis and external cause categories.					
(c)	Includes separations from public and private hospitals in all states and territories.					
(d)	Data exclude separations for Newborns without qualified days, Hospital boarders and Posthumous organ procurement.					
(e)	Rates are calculated using ABS backcast population estimates and projections based on the 2011 Census.					
(f)	Persons data include records with sex not stated or indeterminate.

(a) ICD-10-AM codes F10, K70, K75 and T51 based on principal diagnosis. External cause codes X45, X65 and Y15 based on any external cause reported. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).

(b) Directly age-standardised using the Australian 2001 standard population.

Table 11A.1.10 Hospital separations related to alcohol use (age standardised rate per 100 000 population), NSW, Victoria, Queensland, WA, SA and public hospitals in the NT, 2004-05 to 2014-15 (a), (b), (c)

	2014-15	2013-14	2012-13 (d)	2011-12	2010-11	2009-10	2008-09	2007-08	2006-07	2005-06	2004-05
(c)	From 2004-05 to 2009-10, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Aboriginal and Torres Strait Islander identification in hospitalisation data. Data are for residents of these jurisdictions, and exclude separations from private hospitals in the NT. From 2010-11 onwards, data for all jurisdictions are considered to be of acceptable quality (see previous table).										
(d)	Some data have been revised for WA for 2012-13 affecting counts of separations with principal diagnoses in the F chapter.										
(e)	'Other' includes hospitalisations of non-Indigenous people and those for whom Indigenous status was not stated.										
(f)	Rate ratio is the age standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the 'other Australians' hospitalisation rate (which includes Indigenous status not reported).

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). ICD-10-AM (fifth edition) codes F10, K70, K75 and T51 based on principal diagnosis. External cause codes X45, X65 and Y15 based on any external cause reported. Overlapping may exist between separations by toxic effect of alcohol and separations based on external causes X45, X65, or Y15.

(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.

TABLE 11A.1.11

Table 11A.1.11 **Hospital separations related to alcohol use, Aboriginal and Torres Strait Islander persons (numbers and crude rate per 100 000), by remoteness areas, Australia, 2012-13 to 2014-15 (a), (b)**

TABLE 11A.1.12

Table 11A.1.12 **Hospital separations related to alcohol use (age standardised rate per 100 000), by remoteness areas, Australia, 2012-13 to 2014-15 (a), (b)**

	2014-15			2013-14			2012-13 (c)		
	Major cities	Inner and outer regional	Remote and very remote	Major cities	Inner and outer regional	Remote and very remote	Major cities	Inner and outer regional	Remote and very remote
Alcoholic liver disease (K70)	6.2	5.3	5.1	5.5	5.1	5.9	5.7	5.2	6.4
Total	2.8	3.7	7.1	3.1	3.7	7.9	3.7	3.8	7.4

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). ICD-10-AM (fifth edition) codes F10, K70, K75 and T51 based on principal diagnosis. External cause codes X45, X65 and Y15 based on any external cause reported. Overlapping may exist between separations by toxic effect of alcohol and separations based on external causes X45, X65, or Y15.

(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.

(c) Some data have been revised for WA for 2012-13 affecting counts of separations with principal diagnoses in the F chapter.

(d) Rates per 100 000 population are calculated using ABS Estimated Resident Population at 30 June at the start of each financial year by remoteness classification from the 2011 Census. Rates were directly age standardised to the 2001 Australian population.

(e) Non-Indigenous includes hospitalisations where Indigenous status was recorded as non-Indigenous and for WA only where Indigenous status was not stated.

(f) Rate ratio is the age standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

(a) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in *Causes of Death, Australia, 2014* (cat. no. 3303.0).

TABLE 11A.1.15

Table 11A.1.15 **Deaths related to alcohol use (age standardised rate per 100 000), by sex, by Indigenous status, NSW, Queensland, WA, SA and the NT, 2010–2014 (a), (b), (c), (d), (e), (f), (g)**

	Aboriginal and Torres Strait Islander			Non-Indigenous			Rate ratio (j)	Rate difference (k)
	Deaths (no.)	Rate per 100 000 (h)	Variability band (±)	Deaths (no.)	Rate per 100 000 (h)	Variability band (±)		
(b)	Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only, which are considered to have adequate levels of Aboriginal and Torres Strait Islander identification in mortality data. Data for these jurisdictions over-represent Aboriginal and Torres Strait Islander populations in less urbanised and more remote locations, and should not be assumed to represent the experience in the other jurisdictions.							
(c)	Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.							
(d)	Although most deaths of Aboriginal and Torres Strait Islander Australians are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these statistics are likely to underestimate the Aboriginal and Torres Strait Islander mortality rate. It is also difficult to exactly identify the difference between the Aboriginal and Torres Strait Islander and non-Indigenous mortality rates because of these data quality issues.							
(e)	Cells with small values have been randomly assigned to protect the confidentiality of individuals, so some totals will not equal the sum of their components. Cells with a zero value have not been affected.							
(f)	These data exclude 65 registered deaths where the Indigenous status was not stated over the period 2010–14.							
(g)	Care should be taken when interpreting mortality rates for Queensland due to recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.							
(h)	Directly age-standardised using the 2001 Australian standard population, by 5-year age group up to 75+.							
(i)	Population data between Census years are based on assumptions about past and future levels of fertility, mortality and migration, and have a degree of uncertainty.							
(j)	Rate ratio is the mortality rate for Aboriginal and Torres Strait Islander Australians divided by the mortality rate for non-Indigenous Australians.							
(k)	Rate difference is the mortality rate for Aboriginal and Torres Strait Islander Australians minus the mortality rate for non-Indigenous Australians.

(a) Homicide includes murder and manslaughter, but excludes driving causing death. Data reflects information available at the time of reporting and is subject to change.

(b) Where an offender has been identified. Excludes Indigenous status and alcohol presence where this was unknown. In the case of multiple offenders, table includes the primary victim and offender only (based on AIC NHMP incident classification).

(c) Aboriginal and Torres Strait Islander homicides are where both victims and offenders of homicide are either Aboriginal and/or Torres Strait Islander Australians.

(d) Non-Indigenous homicides are where both victims and offenders are not Aboriginal and /or Torres Strait Islander. Includes victims and offenders who are Caucasian, Asian and Maori/Pacific Islanders.

Table 11A.1.16 **Alcohol involvement in Aboriginal and Torres Strait Islander and non-Indigenous homicide incidents 1999-2000 to 2013-14 (a), (b)**

	<i>Aboriginal and Torres Strait Islander (c)</i>		<i>Non- Indigenous (d)</i>		<i>Inter-racial (e)</i>		<i>Total</i>	
	<i>Unit</i>	<i>no.</i>	<i>%</i>	<i>no.</i>	<i>%</i>	<i>no.</i>	<i>%</i>	<i>%</i>

(e) Inter-racial homicides are where either the victim or the offender is Aboriginal and Torres Strait Islander Australian. Includes homicides involving: an Aboriginal and Torres Strait Islander offender and non-Indigenous victim, and non-Indigenous offender and an Indigenous victim.

– Nil or rounded to zero.

Table 11A.2.1 Substance use for Aboriginal and Torres Strait Islander people aged 18 years and over, by substance used, Australia, 2002, 2004-05, 2008, 2012-13 and 2014-15 (a), (b)

	2014-15	2012-13	2008	2004-05	2002
(a)	Cells in this table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Estimates with a relative standard error of 25 per cent to 50 per cent should be used with caution; estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use.				
(b)	The substance use questions are comparable across the 2002, 2008 and 2014-15 NATSISS and the 2012-13 NATSIHS. However, when comparing between surveys, it should be noted that there are differences in the proportion of people who did not accept the substance use form (6 per cent in 2002, 9 per cent in 2008, 5 per cent in 2012-13 and 9 per cent in 2014-15). Also, in 2014-15, people were only asked about their use of substances in the last 12 months and not whether they had ever used substances.				
(c)	Includes pain killers, tranquilisers and sleeping pills.				
(d)	Includes heroin, cocaine, petrol, LSD/synthetic hallucinogens, naturally occurring hallucinogens, ecstasy/designer drugs, and other inhalants. Includes methadone for non-medical purposes in 2008, 2012-13 and 2014-15.				
(e)	Sum of components may be more than total as people may have reported more than one type of substance used.				
(f)	This category comprises people who accepted the substance use form but did not state if they had ever used substances.				
(g)	People who accepted the substance use form.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Estimates with a relative standard error of 25 per cent to 50 per cent should be used with caution; estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use.

TABLE 11A.2.3

Table 11A.2.3 **Substance use for Aboriginal and Torres Strait Islander people aged 18 years and over, by remoteness areas, by substance used, 2002, 2004-05, 2008, 2012-13 and 2014-15 (a), (b)**

	<i>Major cities</i>	<i>Inner regional</i>	<i>Outer regional</i>	<i>Non-remote total</i>	<i>Remote</i>	<i>Very remote</i>	<i>Remote total</i>	<i>Australia</i>
(b)	The substance use questions are comparable across the 2002, 2008 and 2014-15 NATSISS and the 2012-13 NATSIHS. However, when comparing between surveys, it should be noted that there are differences in the proportion of people who did not accept the substance use form (6 per cent in 2002, 9 per cent in 2008, 5 per cent in 2012-13 and 9 per cent in 2014-15). Also, in 2014-15, people were only asked about their use of substances in the last 12 months and not whether they had ever used substances.							
(c)	Includes pain killers, tranquilisers and sleeping pills.							
(d)	Includes heroin, cocaine, petrol, LSD/synthetic hallucinogens, naturally occurring hallucinogens, ecstasy/designer drugs, and other inhalants. Includes methadone for non-medical purposes in 2008, 2012-13 and 2014-15.							
(e)	Sum of components may be more than total as people may have reported more than one type of substance used.							
(f)	This category comprises people who accepted the substance use form but did not state if they had ever used substances.							
(g)	People who accepted the substance use form.

(a) The ICD-10-AM codes for poisoning, mental/behavioural disorders and 'other' are for principal diagnosis only. The ICD-10-AM external cause codes used for 'accidental poisoning' are based on any external cause reported. This may lead to overlap between 'accidental poisoning' and the other categories. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).

(b) Directly age-standardised using the Australian 2001 standard population.

(c) From 2004-05 to 2009-10, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Aboriginal and Torres Strait Islander identification in hospitalisation data. Data are for residents of these jurisdictions, and exclude separations from private hospitals in the NT. From 2010-11 onwards, data for all jurisdictions are considered to be of acceptable quality (see previous table).

(d) 'Other' includes hospitalisations of non-Indigenous people and those for whom Indigenous status was not stated.

(e) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the 'other Australians' hospitalisation rate (which includes Indigenous status not reported).

Table 11A.2.10 **Hospital separations related to drug use, age standardised rate (per 100 000 population), NSW, Victoria, Queensland, WA, SA and public hospitals in the NT, 2004-05 to 2014-15 (a), (b), (c)**

Total	845.3	578.5	384.5	764.8	499.3	368.8	720.0	485.1	348.0

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). ICD-10-AM codes for poisoning, mental/behavioural disorders and other conditions are based on Principal diagnoses. External cause codes for accidental poisoning are based on any external cause reported. This may lead to overlap between 'accidental poisoning' and the other categories.

(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(c) Data are for public and private hospitals in all jurisdictions.

(d) Rates per 100 000 population are calculated using ABS Estimated Resident Population at 30 June preceding the reference year by remoteness classification from the 2011 Census.

np Not published.

Females	14.6	7.6	5.4	21.7	5.8	10.3	4.5	4.9	5.1	4.9	2.1	4.7
Persons	16.8	9.1	9.4	24.4	6.1	12.3	6.4	6.7	7.1	6.5	4.1	6.5
Variability bands (±)												
Males	9.7	8.3	12.4	27.6	9.9	5.0	1.0	1.2	1.7	2.0	6.2	0.6
Females	9.1	7.8	9.2	23.7	11.2	4.7	0.7	0.9	1.3	1.5	3.0	0.5
Persons	6.7	5.9	7.9	18.0	7.8	3.5	0.6	0.8	1.1	1.3	3.6	0.4

- (a) Causes of death attributable to drug-induced mortality are based on codes of the International Statistical Classification of Diseases and Related Health Problems, 10th Revision (ICD-10). See Appendix 2, Tabulation of Selected Causes of Death in *Causes of Death, Australia, 2014*, cat. no. 3303.0.
- (b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in *Causes of Death, Australia, 2014* (cat. no. 3303.0).
- (c) Data based on reference year.
- (d) Data are presented in five-year groupings due to the volatility of small numbers each year.
- (e) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.
- (f) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.
- (g) Denominators used in the calculation of rates for the Aboriginal and Torres Strait Islander population are Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Aboriginal and Torres Strait Islander population have been derived by subtracting the Aboriginal and Torres Strait Islander population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.

Table 11A.2.14 **Drug-induced deaths (age standardised rate per 100 000 population), by sex, by Indigenous status, NSW, Queensland, WA, SA and the NT, 2010–2014 (a), (b), (c), (d), (e), (f), (g), (h)**

	<i>Aboriginal and Torres Strait Islander (i)</i>						<i>Non-Indigenous</i>					
	<i>NSW</i>	<i>Qld (j)</i>	<i>WA</i>	<i>SA</i>	<i>NT</i>	<i>Total (k)</i>	<i>NSW</i>	<i>Qld (j)</i>	<i>WA</i>	<i>SA</i>	<i>NT</i>	<i>Total (k)</i>
(h)	Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These five states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.											
(i)	Data on deaths of Aboriginal and Torres Strait Islander people are affected by differing levels of coverage of deaths identified as Aboriginal and Torres Strait Islander across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Aboriginal and Torres Strait Islander and non-Indigenous data.											
(j)	Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.											
(k)	Total includes data for NSW, Queensland, WA, SA and the NT only.

	<i>Unit</i>	<i>no.</i>	<i>%</i>	<i>no.</i>	<i>%</i>	<i>no.</i>	<i>%</i>	<i>no.</i>	<i>%</i>
(b) Where an offender has been identified. Excludes cases where Indigenous status of victim or offender, or drug involvement is unknown. In the case of multiple offenders, table includes the primary victim and offender only (based on AIC NHMP incident classification).									
(c) Aboriginal and Torres Strait Islander homicides are where both victims and offenders of homicide are either Aboriginal and/or Torres Strait Islanders.									
(d) Non-Indigenous homicides are where both victims and offenders are not Aboriginal and Torres Strait Islander. Includes victims and offenders who are Caucasian, Asian and Maori/Pacific Islanders.									
(e) Inter-racial homicides are where either the victim or the offender is Indigenous. Includes homicides involving: an Aboriginal and Torres Strait Islander offender and non-Indigenous victim, and non-Indigenous offender and an Aboriginal and Torres Strait Islander victim.									

– Nil or rounded to zero.

Table 11A.3.1 **State and Territory legislation on juvenile diversions**

S/T	Legislation	Scope
NSW	<i>Young Offenders Act 1997</i>	Young offenders can be diverted using warnings, police cautions and youth justice conferences. Warnings apply for the least serious offences, while more serious offences may elicit cautions, conferences and finally court for the most serious offences. Infringement notices consisting of an on the spot fine can be issued for certain offences.
VIC	Not legislated	Cautioning of offenders is left to the discretion of police officers. Only the court can refer a juvenile to a restorative process – <i>Children, Youth and Families Act 2005</i> .
QLD	<i>Youth Justice Act 1992</i>	Diversionary methods include 'caution' and 'community conference' as alternatives to 'arrest', 'notice to appear', 'summons' or 'warrant'.
WA	<i>Young Offenders Act 1994</i>	Under the Act, police officers can issue young offenders with a formal written caution, or the matter can be transferred to a Juvenile Justice Team (JJT) via police or court referral. Where the matter is referred to a JJT, young people are held accountable for their offending behaviour through meetings with their families, victims and police. No criminal conviction is recorded against the young person.
SA	<i>Young Offenders Act 1993</i>	Legislates for a three tiered system of diversion, involving informal cautions, formal cautions and family conferences
Tas	<i>Youth Justice Act 1997</i>	Under the Act, a juvenile must agree to the convening of a community conference and must sign an undertaking to attend the conference. The juvenile, the relevant police officer and the victim (if present at the conference) must agree on the outcome of a community conference.
ACT	<i>Crimes (Restorative Justice) Act 2004</i>	The Act allows for juveniles to be referred by the police, during the court process, or post sentence. The Act stipulates that an offender is deemed eligible for restorative justice if they 'accept responsibility for the commission of the offence' and agree to take part in a restorative justice process.
NT	<i>Youth Justice Act</i>	The scheme consists of verbal warnings, written warnings, formal cautions, family conferences and victim/offender conferences.

- (a) Juvenile diversion is defined as the number of juveniles who would otherwise be proceeded against (that is, taken to court) but who are diverted by police as a proportion of all juvenile offenders formally dealt with by police. The term diverted includes diversions of offenders away from the courts by way of: community conference, diversionary conference, formal cautioning by police, family conferences and other diversionary programs (for example, to drug assessment/treatment). Offenders who would not normally be sent to court for the offence detected and are treated by police in a less formal manner (for example, issued warnings or infringement notices) are excluded.
- (b) NSW data are for calendar years. The proportion of juvenile diversions are calculated excluding infringement notices. Data will differ to those reported in table 11A.3.3.
- (c) Historical data for Victoria differ from previous Reports as data are now compiled by the Crime Statistics Agency Victoria. Victoria data does not include restorative conferences used by courts.
- (d) Only those offenders whose age, sex and Indigenous status were identified are included.
- (e) WA juvenile diversions include formal cautions and referrals to Juvenile Justice Teams.
- (f) Prior to 1 July 2007, the recording of the racial identity of the alleged offender largely reflected the apprehending officer's opinion based on the physical appearance of the individual. From 1 July 2007, South Australia Police adopted the standard ABS question on Indigenous status for alleged offenders. Juvenile diversions include both formal cautions and transfers to a family conference.
- (g) Data disaggregated by Indigenous status are not available for Tasmania.
- (h) ACT proportion of juvenile diversions has been calculated on total recorded police contacts with juveniles comprising juvenile cautions, referrals to diversionary conferencing, juveniles taken into protective custody and charges pertaining to juveniles.
- (i) Data refers to apprehension cases rather than individual persons, therefore, there may be a number of cases that relate to one person.

Proportion diverted	%	28.2	65.5	66.8	57.5

- (a) This table represents persons of interest (POIs) or alleged offenders who have come to the attention of NSW Police for a recorded criminal incident (driving offences are excluded). Some POIs are formally proceeded against to court and some are proceeded against other than to court whilst others are not proceeded against. The POIs included in the table above have all been proceeded against. POIs are not a count of unique offenders. Where an individual is involved in multiple criminal incidents throughout the year they will appear as a POI multiple times.
- (b) Under the *Young Offenders Act 1997* (NSW), when police apprehend a young person they must first consider whether the young person is entitled to be diverted under the Act by way of warning, caution or youth justice conference.
- (c) Previous reports have included juvenile offenders initially proceeded against to court by Police and then referred to Youth Justice Conference or given a caution by the court under the *Young Offenders Act*. They are now counted as being proceeded against to court by Court Attendance Notice as that was the method of proceeding used by the Police. Consequently data in this report is not comparable with data in previously published reports.
- (d) Driving offences have been excluded.
- (e) Since mid-2008, police have issued compliance notices for breaches of liquor licensing regulations/legislation. Commonly these are for relatively minor breaches eg. fail to display regulated signs.
- (f) Data on warnings is only available from January 2010 onwards due to changes in how warnings are recorded.
– Nil or rounded to zero.

(a) Indigenous status data are based on responses to the ABS Standard Indigenous Question, when asked by Victoria Police at the time of the incident.

(b) Percentages are based on the proportion of young offenders cautioned each time they are proceeded against by police in a financial year. If an alleged offender is proceeded against more than once within the financial year, they will be recorded for each incident separately.

(c) Data for historical years have been revised and should not be compared to data reported in previous Overcoming Indigenous Disadvantage Reports.

Proportion of offenders who were eligible, but declined to participate in diversion	%	na	na	na	na	na	na

(a) Indigenous status data are based on responses to the ABS Standard Indigenous Question, when asked by Victoria Police at the time of the incident.

(b) Percentages are based on the proportion of young offenders cautioned each time they are proceeded against by police in a financial year. If an alleged offender is proceeded against more than once within the financial year, they will be recorded for each incident separately.

na Not available. – Nil or rounded to zero.

(a) WA juvenile diversions include formal cautions and referrals to Juvenile Justice Teams (JJT).

(b) Indigenous status is based on data recorded in the 'Ethnic Appearance' field of the FrontLine Incident Management System. This field is completed on the basis of the attending police officer's subjective assessment of a person's appearance and is recorded for operational purposes only. Care should be exercised in the interpretation of statistics obtained from this field, as a subjective assessment means it is possible that a person attributed to a particular ethnic group does not belong to that group.

Table 11A.3.31 **WA, proportion of juvenile alleged offenders diverted, by type of offence, by Indigenous status, by sex, 2013-14 and 2014-15 (a), (b), (c)**

	<i>Unit</i>	<i>Aboriginal and Torres Strait Islander</i>			<i>Non-Indigenous</i>		
		<i>Male</i>	<i>Female</i>	<i>Persons</i>	<i>Male</i>	<i>Female</i>	<i>Persons</i>
Proportion of offenders who were eligible, but declined to participate in diversion	%	na	na	na	na	na	na

- (a) WA juvenile diversions include formal cautions and referrals to Juvenile Justice Teams (JJT).
- (b) Indigenous status is based on data recorded in the 'Ethnic Appearance' field of the FrontLine Incident Management System. This field is completed on the basis of the attending police officer's subjective assessment of a person's appearance and is recorded for operational purposes only. Care should be exercised in the interpretation of statistics obtained from this field, as a subjective assessment means it is possible that a person attributed to a particular ethnic group does not belong to that group.
- (c) The total number of juvenile diversions and the total number of offenders is based on a count of offenders who were processed for an offence in one or more of the offence categories. As a consequence, if an offender was processed for a crime against property and a drug offence in the same incident, then the offender would be counted twice. If the offender was processed for two offences that fall under the one offence category e.g. crime against property, the offender is only counted once. If the same offender is processed on another occasion in relation to another incident, they are counted again. As a result of this counting rule, the number of juvenile diversions and total offenders will be higher in this table compared with Table 11A.3.30.

(a) Prior to 1 July 2007 the recording of the racial identity of the alleged offender largely reflected the apprehending officer's opinion based on the physical appearance of the individual. From 1 July 2007, South Australia Police adopted the standard ABS question on Indigenous status for alleged offenders.

(b) Juvenile diversions include both formal cautions and transfers to a family conference.

(c) This report differs to previous ones due to a different data extraction method used. The previous reports were based on OCSAR's Crime and Justice publications. The current report is based on an extract of SA Police apprehension data relating to individuals aged 10 to 17 at the time of the alleged offence. The classification system has also changed from previous reports. This report is based on the Australian and New Zealand Standard Offence Classification (ANZSOC). More information on ANZSOC can be found on the Australian Bureau of Statistics website <http://www.abs.gov.au/>. The counting unit is consistent with previous reports and is based on unique apprehension reports per individual.

(d) Numbers of juvenile apprehensions exclude those offences with an unknown method of processing and non-offence matters.

Source: Office of Crime Statistics and Research (unpublished) Attorney-General's Department, South Australia. Data from 2004 and 2005 are based on *Crime and Justice in South Australia - Juvenile Justice 2005* and *Crime and Justice in South Australia - Juvenile Justice 2006*. Data from 2006 to 2015 are based on an extract of police apprehension data.

Total	24.9	15.7	40.6	46.5	100.0	3 620	100.0

(a) Prior to 1 July 2007 the recording of the racial identity of the alleged offender largely reflected the apprehending officer's opinion based on the physical appearance of the individual. From 1 July 2007, South Australia Police adopted the standard ABS question on Indigenous status for alleged offenders.

(b) The 'Total' includes those offenders with either a 'withdrawn' or 'unknown' outcome.

— Nil or rounded to zero.

(a) Prior to 1 July 2007 the recording of the racial identity of the alleged offender largely reflected the apprehending officer's opinion based on the physical appearance of the individual. From 1 July 2007, South Australia Police adopted the standard ABS question on Indigenous status for alleged offenders.

(b) The 'Total' includes those offenders with either a 'withdrawn' or 'unknown' outcome.

— Nil or rounded to zero.

(a) Prior to 1 July 2007 the recording of the racial identity of the alleged offender largely reflected the apprehending officer's opinion based on the physical appearance of the individual. From 1 July 2007, South Australia Police adopted the standard ABS question on Indigenous status for alleged offenders.

(b) The 'Total' includes those offenders with either a 'withdrawn' or 'unknown' outcome.

— Nil or rounded to zero.

(a) Data refers to apprehension cases rather than individual persons, therefore, there may be a number of cases that relate to one person.

(b) Aboriginal and Torres Strait Islander data are based on self-identification by the juvenile.

(c) Where cases did not result in a diversion, these cases either proceeded to court or were resolved in some other manner (it is not an indicator of the number of matters referred to the courts).

Source: Northern Territory Police (unpublished).

2000										
Prior imprisonment										
Aboriginal and Torres Strait Islander	%	72.9	77.5	79.4	72.5	89.3	66.7	66.7	81.1	76.2
Non-Indigenous	%	48.0	59.6	60.9	37.5	66.1	56.7	39.8	24.9	52.1

(a) Prisoners who have had previous imprisonment in another State or Territory may not be counted as having prior imprisonment. Some states and territories may also include episodes on remand as prior imprisonment. See glossary of *Prisoners in Australia* (ABS Cat. no. 4517.0) for complete definition of prior imprisonment.

(b) Excludes breaches of periodic detention orders greater than 3 months.

(c) Prior to 2009, persons sentenced to full-time custody by the ACT were usually held in New South Wales prisons. A new prison facility to house ACT people sentenced to full-time custody, the Alexander Maconochie Centre, began taking prisoners on 30 March 2009. As at 30 June 2009, all ACT prisoners held in New South Wales prisons had been relocated to the new Alexander Maconochie Centre.

(d) Includes prisoners whose prior imprisonment status is unknown.

(a) Due to perturbation, component cells may not add to published totals. As such, published proportions may add to more or less than 100 per cent.

(b) Excludes offenders with a penalty notice as their principal method of proceeding (see Explanatory Notes), Cat. No. 4519.0.

Table 11A.4.7 **Proportion of offenders who were proceeded against by police, by number of times offenders were proceeded during the reference period, by Indigenous status, NSW, Queensland, SA, ACT, NT, 2008-09 to 2014-15 (a), (b)**

	<i>Unit</i>	<i>2014-15</i>	<i>2013-14</i>	<i>2012-13</i>	<i>2011-12</i>	<i>2010-11</i>	<i>2009-10</i>	<i>2008-09</i>
--	-------------	----------------	----------------	----------------	----------------	----------------	----------------	----------------

(c) In some instances, Indigenous status was obtained by ACT Police without giving the offender the opportunity to self-identify. However, the proportion of records not obtained via self-identification was low, and the impact on the data was minimal (see ABS Explanatory Notes).

12 Outcomes for Torres Strait Islander people¹

Box 12.1 Key messages

- The most recent available data are from the ABS 2014-15 National Aboriginal and Torres Strait Islander Social Survey (NATSISS). As a sample survey, it is subject to sampling error, which makes it difficult to detect differences between results if the size of the standard errors are large compared to the size of the difference between the results. For this reason, although not as recent, supplementary data from the 2011 ABS Census are also reported in this section.
- In 2014-15, for many indicators, national outcomes for Torres Strait Islander people² were similar to those for Aboriginal Australians, including for: post-secondary education attainment (table 12A.1.2); personal income (table 12A.1.6); home ownership (table 12A.1.7); and psychological distress (table 12A.1.8).
- However, the proportion of Torres Strait Islander people aged 20–24 years with year 12 or above (79.7 per cent) was significantly higher than for Aboriginal Australians (59.8 per cent), and was similar to that for non-Indigenous Australians (87.9 per cent) (tables 12A.1.1 and 4A.6.1).
- Analysis of 2011 Census data compared outcomes for Torres Strait Islander and Aboriginal Australians, nationally and across remoteness areas.
 - The proportion of Torres Strait Islander people in the Torres Strait Region³ with year 12 or above, was similar to that for non-Indigenous Australians nationally (86 per cent and 87 per cent respectively) and well above that for Aboriginal Australians across all remoteness areas (table 12A.1.9 and figure 12.1)
 - As remoteness increased, outcomes for Aboriginal people decreased (as reflected in reporting across many indicators in this report). However, this is not the situation for Torres Strait Islander people, where for employment and post-school education (and particularly for year 12 or above), outcomes are similar or better in very remote areas compared to non-remote areas (tables 12A.1.9–11).

Torres Strait Islander people continue to maintain a unique cultural identity. They are a separate people in origin, history and way of life, with many cultural connections to New

¹ The Steering Committee notes its appreciation to Dr Felecia Watkin Lui, James Cook University, who reviewed a draft of this section of the report.

² In this chapter, Torres Strait Islander people is used to refer to those people who identify as Torres Strait Islander only or Aboriginal and Torres Strait Islander.

³ The Torres Strait Region is classified as a very remote area, based on the ABS classification for remoteness used in this report.

Guinea and nearby islands (AIATSIS 2008; Shnukel 2001). There is great diversity in Torres Strait Islander communities, their languages and traditions. There is also regional variability across Torres Strait Islander communities, including differences between those living on the Torres Strait islands, in mainland Australia and in remote versus urban communities.

In the 2011 Census, there were 548 370 people identified as being of Aboriginal and/or Torres Strait Islander origin. Of these people, 90 per cent were of Aboriginal origin only, 6 per cent were of Torres Strait Islander origin only and 4 per cent identified as being of both Aboriginal and Torres Strait Islander origin. People who identified as being of Torres Strait Islander origin only and as being both Aboriginal and Torres Strait Islander account for 9.5 per cent of the Indigenous population (52 616 people, hereafter referred to as Torres Strait Islander people). The majority of Torres Strait Islander people lived in Queensland (62.6 per cent) and 85 per cent live outside of the Torres Strait. The Indigenous regions with the largest count of Torres Strait Islander people were Cairns-Atherton (15 per cent), Brisbane (12 per cent) and Townsville-Mackay (12 per cent) (ABS 2012). Torres Strait Islander people living on the mainland retain close ties with families and communities in the Torres Strait (Lui 2012; Lui et al. 2016).

In 2014-15, a greater proportion of the Torres Strait Islander only population aged 15 years and over spoke an Australian Indigenous language (34.8 per cent) and spoke an Australian Indigenous language as their main language at home (23.6 per cent) compared with 16.3 per cent and 9.0 per cent of Aboriginal only Australians respectively (ABS 2016).

12.1 Selected outcomes for Torres Strait Islander people

Torres Strait Islander people make up a very small proportion of the Australian population (0.3 per cent), making it difficult to report reliable data from sample surveys at a disaggregated level. In this chapter, data reported for 'Torres Strait Islander' people include both people who identified as 'Torres Strait Islander only' and people who identified as 'Both Aboriginal and Torres Strait Islander'. For comparison purposes, data for 'Aboriginal' Australians in this chapter have been limited to people who identified as 'Aboriginal only'.

This chapter presents a selection of results for Torres Strait Islander and Aboriginal only Australians from the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS) 2014-15, with non-Indigenous comparators from the ABS General Social Survey (GSS) 2014 and the ABS Survey of Education and Work (SEW) 2014. NATSISS data disaggregated into three geographical areas (Torres Strait Indigenous region, Queensland [including the Torres Strait Indigenous region] and the Balance of Australia [which comprises the remainder of Australia]) are available in the attachment tables (tables 12A.1.4–7).

This chapter also presents outcomes for the Torres Strait Islander population in the Torres Strait Region using Census data (which measures the total population and therefore does not have sampling error). Census data are reported under Torres Strait Region outcomes below.

Year 12 or post-secondary education

‘Halving the gap in year 12 or equivalent attainment rates for Aboriginal and Torres Strait Islander Australians aged 20–24 years by 2020’ is one of the COAG targets (see section 4.6 for further information on year 12 attainment). Nationally in 2014-15:

- over three-quarters of the Torres Strait Islander population aged 20–24 years (79.7 per cent) had attained at least a year 12 or equivalent or Certificate level II or above, similar to the non-Indigenous population (87.9 per cent⁴) and significantly higher than the Aboriginal population (59.8 per cent) (tables 12A.1.1 and 4A.6.1).
- around half of the Torres Strait Islander population aged 20–64 years (51.2 per cent) had a non-school qualification at Certificate level III or above or were currently studying, similar to the Aboriginal population (45.5 per cent), and both significantly lower than the non-Indigenous population (70.0 per cent⁵) (tables 12A.1.2 and 4A.8.7).

Further information on the population aged 18 years and over who had completed year 12 or a post-secondary qualification at Certificate level III or above as their highest level of education are available in table 12A.1.4, with results not significantly different between Torres Strait Islander adults across the three geographic areas or with Aboriginal adults.

Between 2004-05 and 2014-15, there were no statistically significant changes in the proportions of Torres Strait Islander adults who had completed year 12 as their highest level of education. Similar to Aboriginal adults and non-Indigenous adults, there was an increase over this time period for Torres Strait Islander adults who had completed post-secondary qualifications at Certificate level III or above (from 24.7 per cent in 2004-05 to 41.2 per cent in 2014-15) (table 12A.1.4).

Employment to population ratio

‘Halving the gap in employment outcomes between Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians within a decade’ [by 2018] is one of the COAG targets (see section 4.7 for further information). Nationally in 2014-15:

⁴ NIRA reporting uses the ABS Survey of Education and Work (SEW) non-Indigenous population data. The 2014 SEW estimates 86.4 per cent for the non-Indigenous population aged 20–24 years (SCRGSP forthcoming) – compared to 87.9 per cent from the GSS (table 4A.6.1).

⁵ NIRA reporting uses the ABS Survey of Education and Work (SEW) non-Indigenous population data. The 2014 SEW estimates 64.3 per cent for non-Indigenous population aged 20–64 years (SCRGSP forthcoming) – compared to 70.0 per cent from the GSS (table 4A.8.7).

-
- around two-thirds of the Torres Strait Islander population aged 15–64 years (68.7 per cent) participated in the labour force, higher than the Aboriginal labour force participation rate (60.2 per cent) but lower than the non-Indigenous participation rate (79.8 per cent) (table 12A.1.3 and table 4A.7.12).
 - around half of the Torres Strait Islander population aged 15–64 years (53.2 per cent) were employed, similar to the Aboriginal employment rate (47.8 per cent) but both significantly lower than the non-Indigenous employment rate (74.8 per cent) (table 12A.1.3 and table 4A.7.1).
 - around one-fifth of the Torres Strait Islander labour force aged 15–64 years (21.9 per cent) were unemployed, similar to the Aboriginal unemployment rate (20.6 per cent), both significantly higher than the non-Indigenous unemployment rate (6.2 per cent) (table 12A.1.3 and table 4A.7.8).

From 2004-05 to 2014-15, there were no statistically significant changes in labour force participation rates for the Torres Strait Islander population aged 18–64 years and for the Aboriginal population aged 18–64 years. However, there was an increase in unemployment rates for Torres Strait Islander people (from 13.8 per cent to 23.7 per cent) and Aboriginal Australians (from 12.7 per cent to 18.3 per cent) (table 12A.1.5).

Income

This section reports data based on individual weekly income of people aged 18 years and over. People are ranked from lowest to highest, with those with the lowest 20 per cent of incomes in quintile 1 (lowest quintile), to those with the highest 20 per cent of incomes in quintile 5 (highest quintile).

In 2014-15, income distributions were similar for Torres Strait Islander adults and Aboriginal adults (lowest quintile — 27.0 and 22.2 per cent respectively; middle three quintiles — 65.9 and 69.9 per cent respectively; and highest quintile — 6.6 and 8.0 per cent respectively). There was a greater proportion of non-Indigenous adults (21.2 per cent) at the highest income distribution quintile than for Torres Strait Islander adults and Aboriginal adults (table 12A.1.6).

From 2004-05 to 2014-15, there were no statistically significant changes in income distributions for Torres Strait Islander adults and Aboriginal adults. However, there was a change in income distributions for non-Indigenous adults (an increase in the middle three quintiles and a decrease in the proportions in the lowest quintile) (table 12A.1.6).

Home ownership

In 2014-15, the proportion of Torres Strait Islander adults living in a home owned with or without a mortgage (28.9 per cent) was similar to that for Aboriginal adults (29.0 per cent),

both significantly lower than for non-Indigenous adults (69.0 per cent) (table 12A.1.7 and table 9A.3.2).

Between 2004-05 and 2014-15, there were no statistically significant changes in home ownership rates for Torres Strait Islander adults (32.6 per cent in 2004-05 and 28.9 per cent in 2014-15). There was an increase for Aboriginal adults from 24.6 per cent in 2004-05 to 28.8 per cent in 2008, with no significant change in 2014-15. For non-Indigenous adults, rates fluctuated over this period between 65.9 per cent and 71.8 per cent (tables 12A.1.7).

Psychological distress

In 2014-15, the proportion of Torres Strait Islander adults reporting high/very high levels of psychological distress (34.1 per cent) was similar to that of Aboriginal adults (32.6 per cent), with both rates higher than those for non-Indigenous adults (12.3 per cent). This trend was similar to previous survey years (table 12A.1.8).

Torres Strait Region outcomes

In 2011, around 17 per cent of the Torres Strait Islander population in Queensland lived in the Torres Strait Region (5787 people), representing 77 per cent of the population of the region⁶. An additional 2 per cent of the population in the Torres Strait Region is of Aboriginal origin only (ABS unpublished). This section focuses on the outcomes for Torres Strait Islander people by remoteness area (including the very remote area of the Torres Strait region) compared to the Aboriginal population.

Given the small size of the Torres Strait Islander population, results from sample surveys often have high sampling errors which make it difficult to determine real differences between other population groups and by remoteness area. The rest of this section focuses on Census data, with the most recent available for 2011 — data are reported nationally by remoteness area, including separately for the Torres Strait Region (tables 12A.1.9–11). Survey and Census data are not directly comparable.

Nationally in 2011, for people aged 20–24 years, 54 per cent of Aboriginal and Torres Strait Islander Australians had completed year 12 or above compared with 86 per cent for non-Indigenous Australians (section 4.6). In very remote areas, 77 per cent of the Torres Strait Islander population aged 20–24 years had attained year 12 or above compared with 25 per cent for Aboriginal Australians. In the Torres Strait Region, 86 per cent of Torres Strait Islander people had attained year 12 or above, greater than Torres Strait Islander and

⁶ The Torres Strait Region (for Census purposes) includes the Torres Strait Islands, islands between Cape York and Papua New Guinea, and does not include Bamaga and Seisa (mainland Torres Strait Islander communities at the tip of Cape York), although this area is part of the Torres Strait Regional Authority's area of responsibility.

Aboriginal Australians in all other remoteness areas nationally and similar to the national proportion for the non-Indigenous population (table 12A.1.9).

In addition, the proportion of Torres Strait Islander people aged 20–24 years with year 12 or above was greater across all geographic areas than for Aboriginal people aged 20–24 years (where year 12 attainment declined as remoteness increased) (figure 12.1).

Figure 12.1 20–24 year olds with year 12 or equivalent or AQF Certificate II or above, 2011

Source: ABS Census 2011 tablebuilder; table 12A.1.9.

Nationally in 2011, for people aged 20–64 years, 30 per cent of Aboriginal and Torres Strait Islander Australians had a Certificate level III or above compared with 56 per cent of non-Indigenous Australians (section 4.8). For Torres Strait Islander people, the proportion remained fairly constant across remoteness areas, whereas for Aboriginal Australians it decreased as remoteness increased.

In very remote areas, 29 per cent of Torres Strait Islander people aged 20–64 years had a Certificate level III or above (similar to the proportion in the Torres Strait Region) compared with 12 per cent for Aboriginal people (figure 12.2), but still considerably below the proportion for the non-Indigenous people in very remote areas (52 per cent) (table 12A.1.10).

Figure 12.2 **20–64 year olds with non-school qualification (AQF Certificate III or above), 2011**

Source: ABS Census 2011 tablebuilder; table 12A.1.10.

Figure 12.3 **Employment-to-population ratio, 15–64 year olds, 2011**

Source: ABS Census 2011 tablebuilder; table 12A.1.11.

Nationally in 2011, for people aged 15–64 years, the Aboriginal and Torres Strait Islander employment-to-population ratio was 46 per cent compared with the non-Indigenous ratio of 72 per cent (section 4.7). In very remote areas, the ratio was higher for Torres Strait Islander people (60 per cent) than Aboriginal people (37 per cent). In the Torres Strait

Region, the Torres Strait Islander employment-to-population ratio was 63 per cent, greater than the ratio for Aboriginal and Torres Strait Islanders in all other remoteness areas (figure 12.3), but around 20 percentage points below the non-Indigenous ratios across all remoteness areas (table 12A.1.11).

Things that work

Whilst there is a lack of publicly available research and evaluation of programs that may be contributing to the positive outcomes in the Torres Strait Region (for the year 12, post school education and employment indicators reported in this section), high-level principles and practices that underpin successful outcomes for Aboriginal and Torres Strait Islander Australians are outlined in chapter 3, case studies in good governance are outlined in section 5.4, and community functioning themes are discussed in section 11.5.

12.2 Attachment tables

Attachment tables for this chapter are identified in references throughout this chapter by an ‘A’ suffix (for example, table 12A.1.1). These tables can be found on the web page (www.pc.gov.au/oid2016).

RSE = Relative standard error. **CI** = Confidence interval.

- (a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (b) Estimates with a relative standard error of 25 per cent to 50 per cent should be used with caution.
- (c) For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.
- (d) Includes persons who identified as being of both Aboriginal and Torres Strait Islander origin.
- (e) Queensland includes the Torres Strait Region.
- (f) Persons who identified as being of Aboriginal origin only.

RSE = Relative standard error. **CI** = Confidence interval.

- (a) Long term health conditions are based on International Classification of Diseases (ICD). Data on long term health conditions from the ABS NATSISS (2008 and 2014-15) are based on a short module and are not comparable to data from the ABS health surveys which use the long module and provide a better estimate of prevalence.
- (b) Includes people who identified as being of both Aboriginal and Torres Strait Islander origin.
- (c) People who identified as being of Aboriginal origin only.
- (d) Totals for Aboriginal and Torres Strait Islander people exclude a small number of people who were not present at interview and for whom responses were provided by a proxy.
- (e) Based on scores from the modified Kessler Psychological Distress Scale (K5). Denominator for Psychological distress excludes not applicable and no score.
- na** Not available.

13 Measuring factors that improve outcomes

Analysing the relationship between different factors and measures of wellbeing provides insight into possible ways that outcomes could be improved, and where interventions may be targeted most effectively.

In line with the broadening of focus from *overcoming disadvantage* to *improving wellbeing* (a key development for the previous edition of this report, see section 2.2 in chapter 2 for more information), this chapter has changed from previous editions and now focuses on contributors to positive outcomes in place of the previous focus on multiple disadvantage.

Aboriginal and Torres Strait Islander Australians experience poorer outcomes on average than non-Indigenous Australians for the indicators covered in this report. While not discounting that disadvantage, it is also important to acknowledge the unique aspects and strengths of Aboriginal and Torres Strait Islander cultures in terms of connection to land, culture, spirituality and ancestry, and family, kinship, and community which contribute to resilience and can moderate the impact of stressful life events (Zubrick et al. 2014).

Researchers are increasingly using large datasets such as the Census, national survey collections, and administrative data collections, to examine the relationships between characteristics of Aboriginal and Torres Strait Islander Australians and associated outcomes (see CAEPR (2013) for a range of examples).

Different aspects of wellbeing often seem to occur together — for example, education may be linked with employment outcomes, and both may be linked with income.

- Section 13.1 presents information on the interactions between selected proxy measures of the COAG targets, headline indicators and other indicators. The data do not indicate cause and effect relationships between different indicators — that is, the data do not demonstrate that an outcome in one area is the cause of another outcome — rather, they show where there are relationships between different factors. (For more information about the type of data required to measure causality see Biddle 2014 and Productivity Commission 2013).
- Section 13.2 presents the results of recent research by the Productivity Commission into factors associated with outcomes in literacy and numeracy for primary school students.

13.1 Interactions between measures of wellbeing¹

Box 13.1.1 Key messages

- This chapter presents information on the associations between different factors that can help improve outcomes. By identifying some of these factors Aboriginal and Torres Strait Islander people and governments may be able to more effectively target policies or programs to improve outcomes.
- Section 13.1 presents descriptive statistics drawing on selected education and employment measures in this report, and their interaction with other factors.
- Nationally in 2014-15, for, Aboriginal and Torres Strait Islander Australians:
 - there were strong associations between having a non-school qualification and employment, higher incomes, living in uncrowded households and other positive outcomes (figure 13.1.1)
 - the proportion with a non-school qualification who were employed and had high incomes was similar in remote and non-remote areas (figure 13.1.1)
 - those who were employed were more likely than those who were unemployed, to have higher incomes, live in uncrowded households and were less likely to be a daily smoker, though for some factors these results varied by remoteness (figure 13.1.2; tables 13A.1.4, 13A.1.5, 13A.1.7 and 13A.1.9).

This section examines interactions between different measures of wellbeing for Aboriginal and Torres Strait Islander Australians. Section 2.2 in chapter 2 provides more information on the concept of wellbeing and its measurement. Where a particular population with a particular characteristic also experiences another characteristic, the two aspects are assumed to be linked or associated in some way; for example, high levels of educational attainment appear to be linked with higher employment rates.

The approach to measuring associations between various indicators is described in box 13.1.2. Data are drawn from the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS) 2014-15.

¹ The Steering Committee notes its appreciation to Dr Nicholas Biddle, Centre for Aboriginal Economic Policy Research, who reviewed a draft of this section of the report.

Box 13.1.2 **Measuring associations between the selected proxy measures of the COAG targets, headline indicators and strategic change indicators/areas**

The analysis in this section looks at outcomes in education and employment against selected measures of wellbeing using data from the ABS NATSISS 2014-15. Subgroups (age, sex and remoteness) with different education and employment characteristics are compared against selected indicators of disadvantage.

<i>Selected measures of wellbeing</i>	<i>COAG target/ headline indicator/strategic change indicator/area</i>
Highest year of school was year 10 or above	4.6 Year 12 attainment
Employment	4.7 Employment
Unemployment	4.7 Employment
Not in the labour force	4.7 Employment
Without a non-school qualification	4.8 Post-secondary education
Has profound or severe core activity restriction	4.9 Disability and chronic disease
In the highest quintile of equivalised gross weekly household income	4.10 Household and individual income
In the 2 nd to 4th quintiles of equivalised gross weekly household income	4.10 Household and individual income
In the lowest quintile of equivalised gross weekly household income	4.10 Household and individual income
Arrested in the last 5 years	4.13 Imprisonment and juvenile detention
Whether ever incarcerated	4.13 Imprisonment and juvenile detention
Had unfair experience in the last 12 months because Aboriginal or Torres Strait Islander	5.1 Valuing Indigenous Australians and their cultures
Has difficulty communicating with English speakers	5.3 Engagement with services
Whether can attend or participate in cultural events	5.7 Participation in community activities
Has good/very good or excellent self-assessed health status	8.1 Access to primary health care
Has fair/poor self-assessed health status	8.1 Access to primary health care
Current daily smoker	8.4 Tobacco consumption and harm
Has low/moderate psychological distress (K5)	8.7 Mental health
Has high/very high psychological distress (K5)	8.7 Mental health
Living in a home owned by someone in the household	9.3 Home ownership
Principal source of personal income was wages and salary (includes own Incorporated business)	9.4 Income support

(continued next page)

Box 13.1.2 (continued)

Principal source of personal income was government pension, allowance or benefits

9.4 Income support

Living in an uncrowded household

10.1 Overcrowding in housing

Alcohol consumption did not exceed 2009 lifetime risk NHMRC guidelines

11.1 Alcohol consumption and harm

Alcohol consumption exceeded 2009 lifetime risk NHMRC guidelines

11.1 Alcohol consumption and harm

The analysis:

- classifies the population into various subgroups; (for example has a non-school qualification or has no non-school qualification; is employed or is unemployed)
- compares the proportions of people in each population subgroup who experience other outcomes (for example, comparing the proportions of people *with* and *without* a non-school qualification living in an uncrowded household).

This section provides a brief overview of the data, with more information available in the attachment tables. The analysis in this section shows proportions of people with particular combinations of characteristics shown in the attachment tables, and is different to the multivariate econometric analysis used in section 13.2. As with other sections in this report, only statistically significant differences are highlighted in the text.

Non-school qualifications

In 2014-15, Aboriginal and Torres Strait Islander Australians aged 20–64 years *with* a non-school qualification² were more likely than those *without* a non-school qualification to experience other positive outcomes, including:

- being employed (62.1 per cent compared with 39.8 per cent)
- having wages and salary (including own incorporated business) as their principal source of income (52.3 per cent compared with 33.6 per cent)
- living in a high income household³ (10.7 per cent compared with 2.8 per cent)
- living in a home owned by someone in the household (34.6 compared with 19.8 per cent)
- having left school after completing year 10 or above (83.7 per cent compared with 65.1 per cent) (table 13A.1.1).

² Non-school qualifications in this section includes all qualifications from certificate I and above. This differs from section 4.8, where data are restricted to qualifications of certificate III and above.

³ Defined as the highest quintile of equivalised gross weekly household income (see section 4.10 for detail).

Figure 13.1.1 Aboriginal and Torres Strait Islander Australians aged 20–64 years non-school qualification status — with selected characteristics, 2014-15^{a,b}

^a See table 13A.1.3 for more information on caveats to these data. ^b Error bars represent 95 per cent confidence intervals around each estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2014-15; table 13A.1.3.

Figure 13.1.1 shows interactions between selected outcomes for Aboriginal and Torres Strait Islander Australians with and without non-school qualifications in 2014-15 by remoteness.

- For those *with* a non-school qualification, the proportions by employment and income type were not significantly different between remote and non-remote areas — proportions in uncrowded households and homes owned by residents were higher in non-remote areas than remote areas.
- For those *without* a non-school qualification, the proportions employed or with a wage income, living in uncrowded households or homes owned by residents were higher in non-remote areas than non-remote areas.

For more information about associations between non-school qualifications and other factors (including disaggregation by age and sex) see tables 13A.1.1–3. For more information about non-school qualifications in general, see section 4.8 ‘Post-secondary education — participation and attainment’.

Employment, unemployment and participation in the labour force

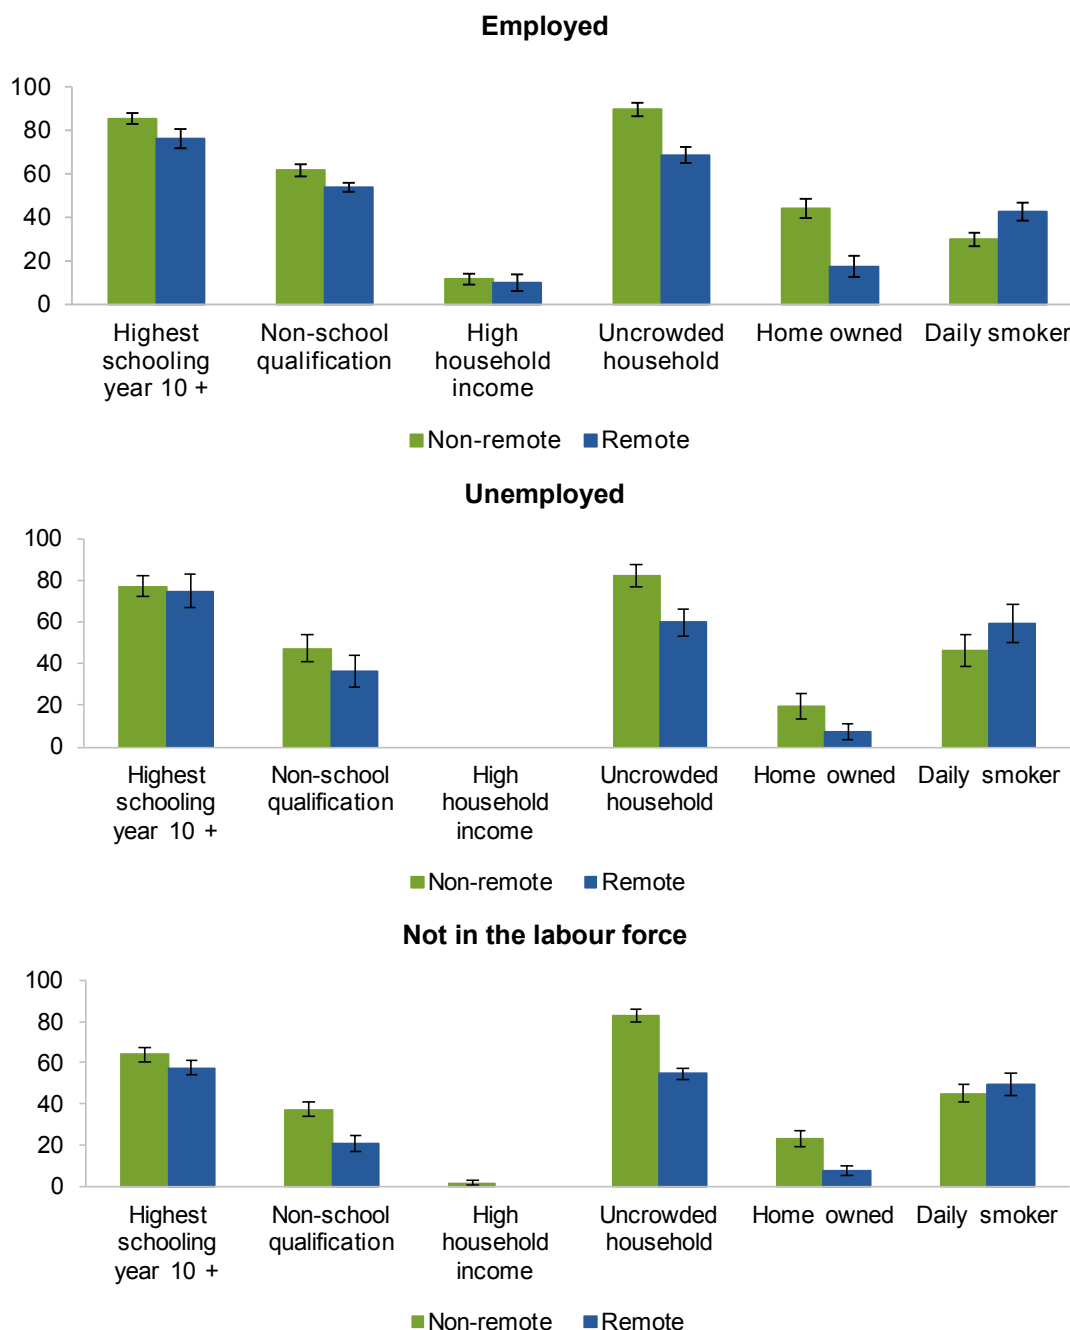

Nationally in 2014-15, Aboriginal and Torres Strait Islander Australians who were employed were more likely to have higher incomes, higher educational attainment, live in uncrowded households, live in homes owned by a member of the household and less likely to be a daily smoker, compared to those who were unemployed or not in the labour force (figure 13.1.2; tables 13A.1.1 and 13A.1.7).

In 2014-15, for Aboriginal and Torres Strait Islander Australians aged 15–64 years, those who were *employed* were more likely than those who were *unemployed* to:

- have a non-school qualification (60.4 per cent, compared to 45.3 per cent [32.5 per cent for those not in the labour force]), except for those in remote areas who have been employed for less than 12 months (47.4 per cent)
- have completed schooling to year 10 or above (83.8 compared to 77.1 per cent), except for those employed in remote areas (76.3 per cent, with 75.0 per cent for unemployed people in remote areas)
- be living in an uncrowded household (86.6 per cent compared to 76.5 per cent), except for those employed in remote areas (68.7 per cent, with 59.9 per cent for unemployed people in remote areas)
- live in a home owned by a member of the household ((39.7 per cent compared to 16.8 per cent) (tables 13A.1.4, 13A.1.5, 13A.1.7 and 13A.1.9).

Those who were employed were less likely than those who were unemployed to be daily smokers (32.0 per cent compared to 50.2 per cent) — in both non-remote (33.5 per cent compared to 46.5 per cent) and remote areas (42.7 per cent compared to 59.4 per cent) (tables 13A.1.4, 13A.1.5, 13A.1.7 and 13A.1.9).

13.2 Factors related to primary education achievement⁴

Box 13.2.1 Key messages

- The Productivity Commission recently undertook a research project that used quantitative analysis to examine the factors that contribute to the literacy and numeracy achievement of Aboriginal and Torres Strait Islander primary school students (and, for comparison, non-Indigenous students).
- For both Aboriginal and Torres Strait Islander students and non-Indigenous students, most of the variation in achievement is attributable to student-level characteristics (things that vary between students in a school, like demographic background) rather than school-level characteristics (things that vary between schools, like staff numbers and school fees paid).
- Socioeconomic status explains more of the variation in literacy and numeracy achievement than any other characteristic observed in the dataset for both Aboriginal and Torres Strait Islander students and non-Indigenous students.
 - But characteristics observed in the dataset collectively explain less than one-third of the total variation in student achievement. Most of the unexplained variation is due to differences between students (rather than between schools).
 - These results mesh with findings from the broader education literature — children have individually different learning styles and needs that are not readily categorised according to demographic characteristics.
- Even after observed characteristics are taken into account, Aboriginal and Torres Strait Islander students have lower test scores, on average, than non-Indigenous students. This means there are factors unobserved in the data that explain differences in achievement.
- There are some schools where Aboriginal and Torres Strait Islander students do considerably better (and worse) than might be expected given their characteristics and those of the school they attend. Insights from the systematic evaluation of high (and low) achieving schools could shed light, in a cost effective way, on what works best to lift achievement of Aboriginal and Torres Strait Islander students.

Formal education is central to life outcomes. Higher levels of educational attainment can facilitate better health, more secure and higher paying jobs and a much lower likelihood of living in poverty. Literacy and numeracy skills developed through education are fundamental to a person's quality of life — and to educational attainment. Without the ability to read, for example, many things in life are more difficult.

Primary schooling is a critical period for the development of literacy and numeracy skills. Most Aboriginal and Torres Strait Islander students finish primary school with a good foundation for further learning, but many do not (section 4.4). Education research suggests that there is a range of factors that might influence education achievement. These include characteristics of the broader social environment in which a child lives, the school they attend, their peers, teachers and family, and of the students themselves. Many of these

⁴ The production of the PC research report from which the material in this section is sourced included an external review process.

characteristics lie outside the control of education policy makers, schools or teachers. But to the extent that characteristics of this type tend to be associated with achievement, an understanding of that association might help in the development of education policy targeting improved achievement.

Examining the contributors to literacy and numeracy achievement

The Productivity Commission recently undertook a research project examining factors that contribute to the literacy and numeracy achievement of Aboriginal and Torres Strait Islander primary school students (and, for comparison, of non-Indigenous students). Drawing on newly available national quantitative data, the project used statistical analysis to address the following questions:

- What are the relative contributions of school-level characteristics (variables that are constant across individual schools) and student-level characteristics (variables that are specific to each student) to Aboriginal and Torres Strait Islander primary school students' literacy and numeracy achievement?
- Among school-level characteristics and student-level characteristics, what matters most to literacy and numeracy achievement?
- Are the most important contributors to literacy and numeracy achievement the same for Aboriginal and Torres Strait Islander and non-Indigenous primary school children?

This analysis was supplemented with a literature review around the question of what works best to improve literacy and numeracy achievement among Aboriginal and Torres Strait Islander primary school students.

This section provides a summary of this research. The full report, *Indigenous Primary School Achievement*, is available on the Commission's website (PC 2016).

About the dataset

The project made use of data for primary school students from the Australian Curriculum, Assessment and Reporting Authority (ACARA). These data include information for 2013 and 2014 about the literacy and numeracy achievement of all Australian Year 3 and Year 5 students who participated in the National Assessment Program — Literacy and Numeracy (NAPLAN) tests in those years, along with information about student and family demographics and characteristics of the schools these students attended.⁵

While students cannot be personally identified, information for each student and the school they attend can be linked — which permits a richer analysis than would be possible if data

⁵ The numbers presented in this report may differ slightly from those published in ACARA's National Report on Schooling due to an updated dataset.

were available only for students or only for schools. The data cover all Australian primary school students and thus support analysis of achievement among Aboriginal and Torres Strait Islander students. In 2014, for example, the data included about 290 000 Year 5 students in total, about 14 600 of whom were Aboriginal and Torres Strait Islander students.

While the ACARA data contain useful information, and support policy relevant insights, only a subset of the characteristics thought to be associated with education achievement are measured — or observed — in the dataset (first column in figure 13.2.1). Measures for some of the unobserved characteristics exist in other data sources but were not available for the project, or not available for all students (second column in figure 13.2.1). For some other unobserved characteristics, data do not exist (third column in figure 13.2.1). Two sets of observed characteristics are defined for the statistical analysis — school-level characteristics (shaded green) and student-level characteristics (shaded blue).

Grouping of characteristics in the statistical analysis:

■ School-level ■ Student-level ■ Unobserved

^a The figure provides examples of characteristics. It is not an exhaustive list. ^b The figure categorises unobserved characteristics according to whether relevant information exists at a national level. Unobserved data that exist include data that are believed to be held in administrative records. ^c LBOTE is an abbreviation for 'language background other than English'.

Insights from the analysis

Simple analysis of the dataset indicates that there is wide variation in literacy and numeracy achievement among both Aboriginal and Torres Strait Islander primary school students and non-Indigenous primary school students (figure 13.2.2). But Aboriginal and Torres Strait Islander students are much more likely to record lower scores, and less likely to record higher scores, than non-Indigenous students. Aboriginal and Torres Strait Islander students are also less likely to meet national minimum standards for literacy and numeracy than non-Indigenous students (see section 4.4 for more information).

Figure 13.2.2 Distribution of reading scores for Aboriginal and Torres Strait Islander students and non-Indigenous students (Year 5, 2014)

Source: Productivity Commission estimates based on ACARA data (unpublished).

Many commentators focus on gaps in educational achievement between Aboriginal and Torres Strait Islander and non-Indigenous students in remote and very remote areas (particularly in the Northern Territory), with Aboriginal and Torres Strait Islander primary school students in these areas on average achieving well below non-Indigenous primary school students. But gaps in literacy and numeracy achievement between Aboriginal and Torres Strait Islander primary school students and non-Indigenous primary school students are present across all regions (and across all states and territories). Further, remote and

very remote students make up a relatively small share (20 per cent) of all Aboriginal and Torres Strait Islander primary school students (figure 13.2.3).

When the contributions of Aboriginal and Torres Strait Islander students in different parts of the country to the national gap are assessed, no single geographic area makes a dominant contribution (figure 13.2.4).

Figure 13.2.3 Gaps in education achievement by remoteness and the proportion of Aboriginal and Torres Strait Islander year 5 students by remoteness area, 2014^{a,b}

^a Excludes 1975 Aboriginal and Torres Strait Islander students (14 per cent) and 16 454 non-Indigenous students (6 per cent) who either did not participate in the reading test or had no defined region. ^b 'NMS' is an acronym for national minimum standard.

Breaking down the variation in achievement

Using a regression-technique called ‘multi-level modelling’, the variation in achievement described above can be broken down into four groups:

- explained student-level variation (variation between students within a school that can be explained by student-level characteristics in the dataset)
- unexplained student-level variation (variation between students within a school that cannot be explained by student-level characteristics in the dataset)
- explained school-level variation (variation between schools that can be explained by school-level characteristics in the dataset)
- unexplained school-level variation (variation between schools that cannot be explained by school-level characteristics in the dataset).

Figure 13.2.5 show this breakdown for the literacy and numeracy achievement of students in Year 5.

Figure 13.2.5 **Shares of total variation in achievement by Indigenous status (Reading and numeracy, Year 5, 2013 and 2014 pooled)^a**

^a Explained student or school-level variation is attributable to characteristics observed within the ACARA data. Unexplained variation is associated with unobserved characteristics.

Source: Productivity Commission estimates based on ACARA data (unpublished).

Student-level characteristics matter more to achievement than school-level characteristics

- For both Aboriginal and Torres Strait Islander students and non-Indigenous students, most of the variation in achievement is attributable to student-level, rather than school-level characteristics. Many prior studies that do not separate students by Indigenous status have reached similar results (Gemici, Lim and Karmel 2013; Lamb 2015; Lamb et al. 2004; Lokan, Greenwood and Cresswell 2008; Marks 2010; Nous Group 2011; Rothman and McMillan 2003).
- However, for Aboriginal and Torres Strait Islander students, (explained and unexplained) school-level variation accounts for a somewhat larger share than for non-Indigenous students.
 - This is due largely to students in very remote areas, where about 40 per cent of the variation in achievement among Aboriginal and Torres Strait Islander students is attributable to schools.
 - This could be because Aboriginal and Torres Strait Islander students within each very remote community share similar social and family influences, or it could be

because schools are smaller in very remote areas, so students attending the same school are more likely to have been taught by the same teachers.⁶

- While school-level characteristics account for a small share of total variation overall, this does not necessarily mean that the influence of school-level initiatives on achievement is permanently limited. It may be possible for schools to have more influence than they do.
- There are some schools where students do better than their characteristics would suggest (see below). If there were more schools where this was the case, there might be less variation in student achievement, students' characteristics might make a smaller contribution to variation in achievement, and the contribution of schools might be larger.

Much of the variation in achievement is unexplained

Overall, much of the total variation in student achievement remains unexplained by the characteristics observed in the ACARA data.

- Student- and school-level characteristics observed in the ACARA data explain, at most, 30 per cent of the total variation, for both Aboriginal and Torres Strait Islander students and non-Indigenous students.
- This is not just a function of the relatively limited range of student- and school-level characteristics observed in the ACARA dataset. Other research, using datasets with richer information about schools and students, and looking only at the general student population, has only been able to explain at most about half of the variation in student achievement.
- Linking more information with the current ACARA data would enable richer analysis of student achievement, but it is likely that a large share of the variation in student achievement would remain unexplained — and our understanding of what might work best to lift achievement may not be markedly advanced by data of this type. A key reason for this is that student achievement tends to vary widely for each characteristic considered (it does not cluster on the basis of particular characteristics)
- The conclusion that a large share of variation in achievement is associated with unobserved student-level characteristics is well-established in the relevant literature. As discussed further below, it meshes with the view from the literature about what works best to lift achievement — strategies that target the learning needs of individual students.

⁶ The influence of teachers on achievement will be reflected at a school level, to the extent that it is constant across schools, and at a student level to the extent that it is specific to each student. Therefore, school-level variation may capture the effects of teaching more in very remote areas

Socio-economic status accounts for some but not all of the explained variation in achievement

A technique called dominance analysis was used to examine which of the school- and student-level characteristics observed within the ACARA data made the largest contribution to explaining variation in student achievement.

The results (figure 13.2.6) suggest that:

- for both Aboriginal and Torres Strait Islander students and non-Indigenous students, characteristics related to socioeconomic status⁷ (at a student and school level) are among the largest contributors. For Aboriginal and Torres Strait Islander students, these characteristics account for 10 per cent of total variation in achievement. For non-Indigenous students, these characteristics account for 13 per cent of total variation in achievement
- for Aboriginal and Torres Strait Islander students, other characteristics are also large contributors. Particularly, school attendance rates (accounting for nearly 5 per cent of total variation) and the percentage of Aboriginal and Torres Strait Islander students within a school (accounting for about 4 per cent of total variation).

While the analysis suggests that social disadvantage (reflected in socio-economic status and the percentage of Aboriginal and Torres Strait Islander students within a school) is a key factor in Aboriginal and Torres Strait Islander students' achievement, it is important to remember that most (about 70 per cent) of variation in achievement remains unexplained.

⁷ Student-level socioeconomic status was captured with variables that indicate a student's parents' occupation and highest level of education. School-level socioeconomic status was captured with variables for percentage of parents by highest education level and percentage of parents by occupation at a student's school, school fees and parent contributions per student (standardised by school sector) interacted with school sector.

Figure 13.2.6 **Relative importance of different observed characteristics in explaining NAPLAN reading achievement^{a,b}**

Year 5, 2013 and 2014 pooled

^a Results presented are general dominance statistics, which reflect the average contribution of a set of observed characteristics to the model's total variation. ^b The relative importance of calendar year was not examined, but was included in all dominance analysis regressions. Calendar year explained 1 per cent or less of the variation in NAPLAN scores. ^c Student socioeconomic status (SES): mother's and father's highest education level, mother's and father's occupation. ^d School socioeconomic status (SES): percentage of mothers and fathers by highest education level, percentage of mothers and fathers by occupation, school fees and parent contributions per student (standardised by school sector) interacted with school sector. ^e Other characteristics: school sector, combined school indicator, average class size, non-teaching staff per student, number of enrolments, percentage of students with a language background other than English, test participation rate, student mobility indicator. ^f School finances per student: recurrent funding (less school fees), capital income deductions, capital expenditure.

Aboriginal and Torres Strait Islander students have lower test scores on average, even after accounting for differences in observed characteristics

Even after other observed characteristics are taken into account, Aboriginal and Torres Strait Islander primary school students have lower test scores on average than non-Indigenous students (figure 13.2.7).

- Taking into account observed characteristics, the test scores of Aboriginal and Torres Strait Islander students in metropolitan areas are lower, on average, than those of non-Indigenous students in those areas.
- Aboriginal and Torres Strait Islander students are further behind their non-Indigenous peers, holding other characteristics equal, the more remote the region in which they attend school.
- In contrast, after taking other characteristics into account, non-Indigenous students in more remote areas have higher test scores than their metropolitan peers.

Figure 13.2.7 **Differences in achievement, holding other observed characteristics equal (reading and numeracy, Year 5, 2013 and 2014 pooled)^{a,b,c}**

^a Regression coefficients on Indigenous status and on Indigenous \times remoteness interaction terms have been summed together where relevant to produce these estimates. ^b Vertical lines represent 95 per cent confidence intervals. ^c Relationships for categorical variables should be interpreted relative to the default category noted in the subtitle.

Source: Productivity Commission estimates based on ACARA data (unpublished).

This suggests that Aboriginal and Torres Strait Islander students have characteristics that are unobserved in the ACARA data that result in differences in achievement relative to

non-Indigenous students. What these might be is unclear. Among many possible explanations from the literature on Aboriginal and Torres Strait Islander education (but typically untested using large-scale datasets, if at all) are the effects of: relatively low rates of attendance at a student level⁸; speaking Aboriginal English; relatively high rates of hearing loss; relatively low expectations for achievement among Aboriginal and Torres Strait Islander students, their parents and their teachers; discrimination by peers, teachers or school systems; and a lack of acknowledgment of, and support for, Aboriginal and Torres Strait Islander culture among teachers and within schools.⁹

Differences in observed characteristics can only explain about half of the gap in achievement

In 2014, the mean reading score for Year 5 Aboriginal and Torres Strait Islander students was 426, and for non-Indigenous students it was 506 — a gap of 80 points.

A statistical technique called Blinder-Oaxaca decomposition was used to examine the extent to which gaps in reading and numeracy test scores between Aboriginal and Torres Strait Islander students and non-Indigenous students was because the two groups had different characteristics (for example, different socioeconomic backgrounds) or because the association between their characteristics and achievement was different (for example, if coming from a low socioeconomic background has a smaller association with achievement for one group).

The results suggest that differences in observed characteristics account for about half of the gap in average test scores. In other words, if the average Aboriginal and Torres Strait Islander student had the same observed characteristics as the average non-Indigenous student, the gap between their test scores would be half as large.

Some schools defy expectations

There are some schools where the analysis suggests that Aboriginal and Torres Strait Islander students do considerably better than might be expected given their characteristics and the observed characteristics of those schools, and some where they do considerably worse.¹⁰ Perhaps there is something about the culture in these schools, the school leadership

⁸ Hancock et al. (2013, p. 169), using data including measures of attendance at a student level for all Western Australian students (both Indigenous and non-Indigenous), concluded that ‘higher rates of absence are uniformly associated with progressively worse achievement’. Using data from the Longitudinal Survey of Australian Youth (Year 9 students), Biddle (2014) concluded that lower levels of attendance among Aboriginal and Torres Strait Islander students accounted for about 20 per cent of the achievement gap with non-Indigenous students.

⁹ Chapter 4 of the PC research report, includes an overview of key literature sources (PC 2016).

¹⁰ Controlling for observed student-level and school-level characteristics, thirteen schools were identified as performing within the top five per cent in *both* reading and numeracy tests for both Year 3 and Year 5 Aboriginal and Torres Strait Islander students. A further 33 schools were identified as performing within the top five per cent on either reading *or* numeracy tests for both Year 3 and Year 5 Aboriginal and Torres Strait Islander students.

or teacher quality that contribute. The Commission cannot discern why this is so from the ACARA data and all schools in the dataset are de-identified. However, if they were identified, they could be systematically examined to see if there is something that could be learned from them. Before undertaking this work however, it would be useful to cross check the results from this analysis using other methods of examining school performance to secure confidence that the schools identified for evaluation really are particularly effective, or ineffective, over time in educating Aboriginal and Torres Strait Islander students.

Insights from the literature on what works

The broader education literature suggests that the key to improving student achievement, for all students, is high quality instruction — including assessment of each child’s learning needs, identification of strategies to meet them and evaluation of the effectiveness of those strategies, that is, individualised instruction. This emphasis on the importance of individualised instruction for improving achievement aligns with the observation from analysis of the ACARA data that unobserved student characteristics are the main contributor to variation in student achievement. According to the literature, high quality instruction is facilitated by:

- effective use of data in assessing where students are at and evaluating the impact of teaching interventions
- high expectations (including a student’s expectations of him or herself)
- positive student wellbeing
- strong student–teacher relationships
- supportive school and system leadership, including with respect to professional development of the teaching workforce.

While the education literature does not tend to be specific to Aboriginal and Torres Strait Islander students, there is no evidence to suggest that the fundamentals of what works best in supporting achievement for Aboriginal and Torres Strait Islander students is any different to those for non-Indigenous students. But, as discussed in the statistical analysis above, Aboriginal and Torres Strait Islander students do have unobserved characteristics that differ from those of non-Indigenous students.

To effectively individualise instruction for Aboriginal and Torres Strait Islander students, teachers need to take into account the particular challenges (and opportunities) faced by these students. The available evidence suggests that a culture of high expectations in schools and strong student–teacher, and community, relationships are particularly important to Aboriginal and Torres Strait Islander students’ achievement. Recognition of, and support for, culture are also important.

Some policy-related observations

The ACARA data used in the study contribute markedly to the national education evidence base. That said, the newly available data are only a subset of the characteristics thought to matter to student achievement. Gaps in the evidence base remain. In part, these gaps could be filled with information held by states and territories (figure 13.2.1). Information about student health and individual attendance rates are noteworthy examples. But, it is unclear whether understanding of how to improve achievement would be markedly advanced by richer national-level data alone.

The fact that much of the variation in student achievement is a function of unexplained differences between students suggests that a ‘one size fits all’ approach to improving achievement is unlikely to be effective for Aboriginal and Torres Strait Islander students. Different students bring different things to the classroom. And just because a student has a certain set of observed characteristics (for example, a low socioeconomic background) does not predestine them to lower achievement. Strategies that target the needs of individual Aboriginal and Torres Strait Islander students, whatever their background characteristics, are likely to be particularly important in improving achievement.

Despite a long history of policy attention, large disparities in educational achievement persist between Aboriginal and Torres Strait Islander students and non-Indigenous students. Better evaluation of initiatives is clearly needed. Given the importance of unobserved factors to variation in achievement, insights from evaluation of high and low achieving schools (the achievement ‘outliers’) could shed light, in a cost effective way, on what works best to lift achievement of Aboriginal and Torres Strait Islander students. While there are some isolated published instances of outlier school evaluation, the findings of this project suggests that systematic evaluation of schools that do a particularly good job of educating Aboriginal and Torres Strait Islander students is needed to better inform policy development to reduce the gap in educational achievement.

NHMRC = National Health and Medical Research Council.

(a) Non-school qualifications are awarded for educational attainments other than those of pre-school, primary or secondary education. Includes from Certificate I to Postgraduate degree. Includes a small number of people aged 20–24 years who were still at school.

(b) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Equivalised household income quintile boundaries for the total population were derived from the 2014-15 National Health Survey and adjusted for Consumer Price Index (CPI) increases between the 2014-15 enumeration period of the National Health Survey and the 2014-15 enumeration period of the National Aboriginal and Torres Strait Islander Social Survey. These are lowest quintile \$0-\$435 per week; second quintile \$436-\$675 per week; third quintile \$676-\$1 018 per week; fourth quintile \$1 019-\$1 550 per week; highest quintile \$1 551 or more per week.

(d) Proportion based on people in households in which income was stated (133 900, 122 300, 256 300).

(e) Proportion based on people for whom income was stated (177 500, 166 800, 344 300).

(f) Based on the Canadian National Occupancy Standard for Housing Appropriateness. Includes households with one or more spare bedrooms and households with no additional bedrooms required/spare. Excludes not known. Proportion based on people for whom housing utilisation could be determined (176 900, 165 300 and 342 100).

(g) Includes households that own their dwelling outright, have a mortgage outstanding on their dwelling or are in a shared equity scheme.

(h) Denominator for proportion excludes people whose Kessler score was unable to be determined.

(i) For more information see the 2009 NHMRC guidelines.

– Nil or rounded to zero.

NHMRC = National Health and Medical Research Council.

- (a) Non-school qualifications are awarded for educational attainments other than those of pre-school, primary or secondary education. Includes from Certificate I to Postgraduate degree. Includes a small number of people aged 20–24 years who were still at school.
- (b) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (c) Equivalised household income quintile boundaries for the total population were derived from the 2014-15 National Health Survey and adjusted for Consumer Price Index (CPI) increases between the 2014-15 enumeration period of the National Health Survey and the 2014-15 enumeration period of the National Aboriginal and Torres Strait Islander Social Survey. These are lowest quintile \$0-\$435 per week; second quintile \$436-\$675 per week; third quintile \$676-\$1018 per week; fourth quintile \$1019-\$1550 per week; highest quintile \$1 551 or more per week.
- (d) Proportion based on people in households in which income was stated (133 900, 122 300, 256 300).
- (e) Proportion based on people for whom income was stated (177 500, 166 800, 344 300).
- (f) Based on the Canadian National Occupancy Standard for Housing Appropriateness. Includes households with one or more spare bedrooms and households with no additional bedrooms required/spare. Excludes not known. Proportion based on people for whom housing utilisation could be determined (176 900, 165 300 and 342 100).
- (g) Includes households that own their dwelling outright, have a mortgage outstanding on their dwelling or are in a shared equity scheme.
- (h) Denominator for proportion excludes people whose Kessler score was unable to be determined.
- (i) For more information see the 2009 NHMRC guidelines.

– Nil or rounded to zero. np Not published.

NHMRC = National Health and Medical Research Council.

- (a) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (b) Includes time in current job not known.
- (c) Non-school qualifications are awarded for educational attainments other than those of pre-school, primary or secondary education. Includes from Certificate I to Postgraduate degree. Includes a small number of people aged 15–24 years who were still at school.
- (d) Equivalised household income quintile boundaries for the total population were derived from the 2014-15 National Health Survey and adjusted for Consumer Price Index (CPI) increases between the 2014-15 enumeration period of the National Health Survey and the 2014-15 enumeration period of the National Aboriginal and Torres Strait Islander Social Survey. These are lowest quintile \$0-\$435 per week; second quintile \$436-\$675 per week; third quintile \$676-\$1 018 per week; fourth quintile \$1 019-\$1 550 per week; highest quintile \$1 551 or more per week.
- (e) Proportion based on people in households in which income was stated (37 400, 57 300, 52 300, 146 900).
- (f) Proportion based on people for whom income was stated (54 400, 78 000, 69 000, and 201 000).
- (g) Proportion based on people for whom housing utilisation could be determined (53 600, 77 700, 69 400 and 200 600). Excludes not known.
- (h) Includes households that own their dwelling outright, have a mortgage outstanding on their dwelling or are in a shared equity scheme.
- (i) Denominator for proportion excludes people whose Kessler score was unable to be determined.
- (j) For more information see the 2009 NHMRC guidelines.
- Nil or rounded to zero. .. Not applicable. np Not applicable.

NHMRC = National Health and Medical Research Council.

- (a) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (b) Includes time in current job not known.
- (c) Non-school qualifications are awarded for educational attainments other than those of pre-school, primary or secondary education. Includes from Certificate I to Postgraduate degree. Includes a small number of people aged 15–24 years who were still at school.
- (d) Equivalised household income quintile boundaries for the total population were derived from the 2014-15 National Health Survey and adjusted for Consumer Price Index (CPI) increases between the 2014-15 enumeration period of the National Health Survey and the 2014-15 enumeration period of the National Aboriginal and Torres Strait Islander Social Survey. These are lowest quintile \$0-\$435 per week; second quintile \$436-\$675 per week; third quintile \$676-\$1 018 per week; fourth quintile \$1 019-\$1 550 per week; highest quintile \$1 551 or more per week.
- (e) Proportion based on people in households in which income was stated (37 400, 57 300, 52 300, 146 900).
- (f) Proportion based on people for whom income was stated (54 400, 78 000, 69 000, and 201 000).
- (g) Proportion based on people for whom housing utilisation could be determined (53 600, 77 700, 69 400 and 200 600). Excludes not known.
- (h) Includes households that own their dwelling outright, have a mortgage outstanding on their dwelling or are in a shared equity scheme.
- (i) Denominator for proportion excludes people whose Kessler score was unable to be determined.
- (j) For more information see the 2009 NHMRC guidelines.
- Nil or rounded to zero. .. Not applicable np. Not published.

NHMRC = National Health and Medical Research Council.

- (a) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (b) Includes employed people.
- (c) Non-school qualifications are awarded for educational attainments other than those of pre-school, primary or secondary education. Includes from Certificate I to Postgraduate degree. Includes a small number of people aged 15–24 years who were still at school.
- (d) Equivalised household income quintile boundaries for the total population were derived from the 2014-15 National Health Survey and adjusted for Consumer Price Index (CPI) increases between the 2014-15 enumeration period of the National Health Survey and the 2014-15 enumeration period of the National Aboriginal and Torres Strait Islander Social Survey. These are lowest quintile \$0-\$435 per week; second quintile \$436-\$675 per week; third quintile \$676-\$1018 per week; fourth quintile \$1 019-\$1550 per week; highest quintile \$1551 or more per week.
- (e) Proportion based on people in households in which income was stated (39 800, 125 200 and 311 700).
- (f) Proportion based on people for whom income was stated (53 100, 162 300, and 417 100).
- (g) Based on the Canadian National Occupancy Standard for Housing Appropriateness. Includes households with one or more spare bedrooms and households with no additional bedrooms required/spare. Excludes not known. Proportion based on people for whom housing utilisation could be determined (52 300, 161 100, and 414 200).
- (h) Includes households that own their dwelling outright, have a mortgage outstanding on their dwelling or are in a shared equity scheme.
- (i) Denominator for proportion excludes people whose Kessler score could not be determined.
- (j) For more information see the 2009 NHMRC guidelines.
- Nil or rounded to zero. .. Not applicable. np Not published.

Appendix 1 COAG Communiqués

Extract from COAG Communiqué 3 November 2000

Aboriginal reconciliation

The Council committed itself to an approach based on partnerships and shared responsibilities with Indigenous communities, programme flexibility and coordination between government agencies, with a focus on local communities and outcomes. It agreed priority actions in three areas:

- investing in community leadership initiatives;
- reviewing and re-engineering programmes and services to ensure they deliver practical measures that support families, children and young people. In particular, governments agreed to look at measures for tackling family violence, drug and alcohol dependency and other symptoms of community dysfunction; and
- forging greater links between the business sector and Indigenous communities to help promote economic independence.

Extract from COAG Communiqué 5 April 2002

Reconciliation

The Council also agreed to commission the Steering Committee for the Review of Commonwealth/State Service Provision to produce a regular report against key indicators of Indigenous disadvantage. This report will help to measure the impact of changes to policy settings and service delivery and provide a concrete way to measure the effect of the Council's commitment to reconciliation through a jointly agreed set of indicators.

Extract from COAG Communiqué 14 July 2006

Generational Commitment

COAG agreed that a long-term, generational commitment is needed to overcome Indigenous disadvantage. COAG agreed the importance of significantly closing the gap in outcomes between Indigenous people and other Australians in key areas for action as identified in the *Overcoming Indigenous Disadvantage: Key Indicators Report* (OID) released by COAG in 2003.

COAG has agreed to establish a working group to develop a detailed proposal for generational change including specific, practical proposals for reform which reflect the diversity of circumstances in Australia.

The working group will consider how to build clearer links between the OID framework, the National Framework of Principles for Delivering Services to Indigenous Australians, the COAG Reconciliation Framework and the bilateral agreements between the Commonwealth and State and Territory Governments. The working group will report back to COAG by December 2006.

Extract from COAG Communiqué 13 April 2007

Indigenous Generational Reform

COAG requested that the Indigenous Generational Reform Working Group prepare a detailed set of specific, practical proposals for the first stage of cumulative generational reform for consideration by COAG as soon as practicable in December 2007. National initiatives will be supported by additional bi-lateral and jurisdiction specific initiatives as required to improve the life outcomes of young Indigenous Australians and their families.

COAG also agreed that urgent action was required to address data gaps to enable reliable evaluation of progress and transparent national and jurisdictional reporting on outcomes. COAG also agreed to establish a jointly-funded clearing house for reliable evidence and information about best practice and success factors.

Extract from COAG Communiqué 20 December 2007

Indigenous Australia

COAG agreed the 17 year gap in life expectancy between Indigenous and non-Indigenous Australians must be closed¹.

COAG today agreed to a partnership between all levels of government to work with Indigenous communities to achieve the target of closing the gap on Indigenous disadvantage. COAG committed to:

- closing the life expectancy gap within a generation;
- halving the mortality gap for children under five within a decade²; and
- halving the gap in reading, writing and numeracy within a decade.

COAG has also agreed that States and Territories will report transparently on the use of their Commonwealth Grants Commission funding which is on the basis of Indigenous need funding for services to Indigenous people.

Extract from COAG Communiqué 3 July 2008

Indigenous Reform — Closing the Gap

Leaders agreed to sustained engagement and effort by all governments over the next decade and beyond to achieve the Closing the Gap targets for Indigenous people.

COAG agreed that the Working Group on Indigenous Reform (WGIR) should continue to develop reform proposals for improving community safety, remote service delivery and Indigenous economic development and active welfare for consideration in October 2008. In addition, COAG requested the WGIR, in conjunction with other Working Groups, to report to COAG in December 2008 on how COAG's broader reform agenda will deliver an integrated strategy on closing the gap for all Indigenous people.

¹ The ABS has since revised life expectancy data for Indigenous Australians. However, the COAG target to halve it within a generation remains.

² The ABS has since revised the Indigenous population projections and total population estimates which are required to calculate the mortality rates. However, the COAG target to halve the gap within a decade remains.

Extract from COAG Communiqué 29 November 2008

National Indigenous Reform Agreement

COAG agreed to the National Indigenous Reform Agreement (NIRA) which captures the objectives, outcomes, outputs, performance measures and benchmarks that all governments have committed to achieving through their various National Agreements and NPs in order to close the gap in Indigenous disadvantage. The NIRA provides an overarching summary of action being taken against the closing the gap targets as well as the operation of the mainstream national agreements in health, schools, vocational education and training (VET), disability services and housing and several NPs. The NIRA will be a living document, refined over time based on the effectiveness of reforms in closing the gap on Indigenous disadvantage.

Closing the Gap COAG Meeting in 2009

In October 2008, COAG agreed to convene a dedicated meeting in 2009 on closing the gap on Indigenous disadvantage.

COAG has asked for advice on how the NPs and National Agreements will collectively lead to a closing of the gap and what further reforms are needed. In addition to this, COAG has asked for a Regional and Urban Strategy to coordinate the delivery of services to Indigenous Australians and examine the role that private and community sector initiatives in education, employment, health and housing can make to the success of the overall strategy.

Revised framework of the Overcoming Indigenous Disadvantage Report

In April 2002, COAG commissioned the Productivity Commission's Steering Committee for the Review of Government Service Provision to produce a regular report against key indicators of Indigenous disadvantage, with a focus on areas where governments can make a difference. The resulting Overcoming Indigenous Disadvantage (OID) Report has been published every two years since 2003.

COAG agreed to a new framework for the OID Report that is aligned with the closing the gap targets.

Extract from COAG Communiqué 30 April 2009

Coordinator-General for Remote Indigenous Services

COAG agreed to the operating arrangements for the Coordinator-General for Remote Indigenous Services (the Coordinator General). The Coordinator-General will work with coordinators identified by Commonwealth agencies and State and Northern Territory coordinators-general to coordinate planning for, and monitor the delivery of, programs and services in the 26 locations selected under the Remote Service Delivery National Partnership (NP) agreed by COAG at its November 2008 meeting.³

Extract from COAG Communiqué 2 July 2009

As agreed at its meeting in Perth last October, COAG focused today on its Closing the Gap commitments in relation to Indigenous disadvantage.

The Chair of the Productivity Commission, Mr Gary Banks AO, gave a presentation to COAG on the findings of the report *Overcoming Indigenous Disadvantage: Key Indicators 2009*. The report shows that while there has been some progress against the Closing the Gap targets, such as infant mortality, employment and home ownership, overall the gap between Indigenous and non-Indigenous Australians remains unacceptable. This presentation coincided with the joint launch of the report by the Minister for Families, Housing, Community Services and Indigenous Affairs, the Hon Jenny Macklin MP, and Mr Banks.

Given this context, COAG agreed that effective implementation of the existing National Agreements and National Partnership Agreements was vital to close the gap in Indigenous outcomes. As part of COAG's increasing focus on implementation issues, particular effort will be needed on Indigenous outcomes.

This work will be supported by the Coordinator-General for Remote Indigenous Services, Mr Brian Gleeson, who has recently been appointed and will report to Minister Macklin and COAG. The Coordinator-General's role is to cut through bureaucratic blockages and red tape, and to make sure services are delivered in remote communities.

While the Productivity Commission's Report has framed the significant work to be undertaken, each First Minister gave a presentation to COAG on programs that are working within each jurisdiction to demonstrate the critical success factors that underpin Closing the Gap.

³ The role and function of the Coordinator General concluded in January 2014. The Department of Prime Minister and Cabinet took over responsibility for overseeing the requirements under the NP until it expired on 30 June 2014.

In addition, COAG asked the Working Group on Indigenous Reform to prepare a national strategy to improve food security for Indigenous people living in remote Australia before the end of 2009, adopted a National Integrated Strategy for Closing the Gap, agreed to a Closing the Gap: National Indigenous Education Statement, and signed a Closing the Gap: National Partnership Agreement on Remote Indigenous Public Internet Access. COAG also agreed to a Closing the Gap; National Urban and Regional Service Delivery Strategy to address Indigenous disadvantage in urban and regional locations.

National Integrated Strategy for Closing the Gap in Indigenous Disadvantage

The National Integrated Strategy for Closing the Gap in Indigenous Disadvantage, which COAG endorsed, identifies how investment of additional funds under existing COAG agreements will make a real difference in addressing Indigenous disadvantage. As part of the Integrated Strategy, the Commonwealth is to provide an additional \$46.4 million over four years to fund work undertaken by national data agencies, such as the Australian Bureau of Statistics and the Australian Institute of Health and Welfare, to improve the evidence base and address data gaps.

Closing the Gap: National Urban and Regional Service Delivery Strategy

To close the gap, there will need to be a concerted effort by government among the 75 per cent of Indigenous Australians who live in urban and regional locations across Australia.

COAG therefore agreed to a Closing the Gap: National Urban and Regional Service Delivery Strategy, which commits governments to coordinate and target the substantial funding provided under mainstream and Indigenous-specific programs to address Indigenous disadvantage in urban and regional locations.

Extract from COAG Communiqué 7 December 2009

Report from the Coordinator-General for Remote Indigenous Services

COAG noted the first report from the Coordinator-General for Remote Indigenous Services had been launched on 4 December 2009. The Report recommends improved coordination of Commonwealth and State service delivery in the 29 priority remote communities, particularly in efforts to improve community governance, education and training, delivery of renal health services and reporting. COAG has requested the WGIR

report in early 2010 on actions taken to address the recommendations contained in the report.

Extract from COAG Communiqué 19 April 2010

COAG noted the Working Group on Indigenous Reform's progress status report addressing the recommendations of the 4 December 2009 report of the Coordinator-General for Remote Indigenous Services.

In noting the report from the Working Group, COAG restated its commitment to closing the gap on Indigenous disadvantage and to continued active consideration of the needs of the 29 priority communities under the National Partnership on Remote Service Delivery when implementing COAG National Partnerships relevant to remote communities. COAG also committed to continuing its monitoring of progress of the National Partnership on Remote Service Delivery through existing mechanisms.

Extract from COAG Communiqué 13 February 2011

COAG adopted a streamlined agenda built around five themes of strategic importance that lie at the intersection of jurisdictional responsibilities:

- a long-term strategy for economic and social participation;
- a national economy driven by our competitive advantages;
- a more sustainable and liveable Australia;
- better health services and a more sustainable health system for all Australians
- Closing the Gap on Indigenous disadvantage.

COAG renewed its commitment to strong ongoing monitoring and reporting of important national initiatives to ensure that they meet their goals and are delivered in a timely way. As part of the emphasis placed on implementation, governments committed to prioritising the passage of legislation to give effect to agreements reached by COAG.

Extract from COAG Communiqué 13 December 2013

Improving outcomes for Indigenous Australians

More needs to be done to ensure Indigenous Australians can access the same quality of services and have the same opportunities as other Australians.

There is no quick fix, and governments will need to focus on all areas of policy to make a difference, including education, health, housing, economic development and employment, in urban, regional and remote Australia.

In recent years, school attendance for Indigenous children in some areas has gone backwards. That is unacceptable.

While a lot of work is already underway across governments, COAG agreed an immediate, stronger focus is required to keep kids in schools and ensure safer communities.

COAG agreed to a range of measures to improve Indigenous school attendance, including:

- minimum school attendance benchmarks;
- publishing twice-yearly data on school attendance for all students broken down by Indigenous and non-Indigenous;
- ‘no-excuses’ messaging campaign;
- support and compliance, such as truancy officers, to ensure children attend school; and
- conducting audits of attendance, including on-the-spot audits.

All governments agreed to work together on additional strategies to improve Indigenous school attendance in remote schools and communities, recognising this will lead to better outcomes.

Recognising that each State’s circumstances are different, COAG agreed that some flexibility in support and compliance measures may be needed.

Indigenous Australians, like all Australians, have a right to live in communities safe from violence and abuse.

There are some remote Indigenous communities (with populations greater than 300) with no permanent police presence and where nearby police cannot respond quickly.

COAG agreed to work together to ensure these communities are safe, including through establishing a permanent police presence in some additional communities.

Extract from COAG Communiqué 2 May 2014

Improving outcomes for Indigenous Australians

COAG noted early evidence of success in the work of all jurisdictions working with communities to improve school attendance of Indigenous children. But there is still more to do.

COAG agreed the new five-year target of Closing the Gap between Indigenous and non-Indigenous school attendance, and to ensure it is met, COAG agreed to:

- the Commonwealth and the States and Territories, in partnership with communities, developing specific strategies by no later than 31 October 2014, to improve school attendance where the attendance rate for Indigenous children is below 80 per cent;
- each State and Territory monitoring Indigenous students' attendance rates in schools where they are below 80 per cent at least every month;
- each State and Territory undertaking on-the-spot audits of school attendance information before the end of the year; and
- public reporting of school attendance information, recognising privacy issues, later in 2014, and then twice yearly from 2015 onwards.

COAG also agreed to work more closely with Indigenous communities and take practical approaches to target action and investment to agreed local priorities. As a result, communities and local leaders should be more engaged and better able to share the responsibility for setting priorities and improving outcomes in their own communities.

Extract from COAG Communiqué 10 October 2014

Indigenous Affairs

COAG agreed jurisdictions need to work together to ensure Indigenous people have access to the same opportunities as non-Indigenous people.

All governments agreed that greater effort is required to meet our educational targets for Indigenous children and this will require commitment and integrated action at a community level. COAG agreed to further actions to improve Indigenous students' school attendance and to share evidence of actions that work to improve school attendance. The Commonwealth will work bilaterally with states on:

- more regular reporting of school attendance where there are significant attendance issues, so attendance remains a focus and evidence-based action is taken quickly if rates do not increase;
- effective use of truancy measures, so parents and communities see a direct consequence if they fail to ensure their children attend school; and
- aligning and integrating each government's efforts.

COAG acknowledged there are already many accomplished teachers and principals working in regional and remote schools. COAG asked Education Ministers to report on strategies to attract and retain quality teachers and school leaders to regional and remote

schools. A progress report on this, and school attendance, will be provided to COAG at its first meeting in 2015.

COAG noted Mr Andrew Forrest's report to the Commonwealth, *Creating Parity – The Forrest Review*, on his review of Indigenous training and employment programmes. Jurisdictions noted his key finding that a decent education provides a strong basis for parity in employment outcomes.

The Forrest Review makes broad and ambitious recommendations to the Commonwealth on areas of Commonwealth, state and shared responsibility. COAG discussed priority areas and agreed to identify areas that would benefit from bilateral action, with agreements to be finalised by the end of the year.

COAG noted that the Commonwealth, the Northern Territory and Queensland will urgently investigate Indigenous land administration and land use to enable traditional owners to readily attract private sector investment and finance to develop their own land with new industries and businesses to provide jobs and economic advancement for Indigenous people. The Commonwealth, Northern Territory and Queensland will report on this issue to the first COAG meeting in 2015.

Extract from COAG Communiqué, 17 April 2015

Improving Outcomes for Indigenous Australians

All governments agreed that sustained long-term action is still required to address Indigenous disadvantage. The Prime Minister's 2015 Closing the Gap Report showed that governments are only on track to meet two of the Closing the Gap targets. The Commonwealth, states and territories will work in partnership with local communities to develop 'local solutions for local circumstances', noting this is a focus of the recent Empowered Communities Report developed by Indigenous leaders.

The Commonwealth, states and territories will cooperate bilaterally on priority areas, building on and supporting existing initiatives. This includes:

- plans to improve school attendance and educational outcomes of Indigenous students, focusing on low attendance schools including in urban and regional areas;
- identifying actions to improve Indigenous employment and economic participation and capacity building opportunities across the country, including immediate labour market opportunities; and
- improving community safety in areas such as:
 - action on alcohol and substance misuse,

-
- steps to reduce contact by Indigenous people with the criminal justice system (both as offenders and victims), and
 - improving policing in remote communities.

COAG agreed that national effort is required in further priority areas including early childhood education, early years and maternal health, and will consider strategies to improve outcomes in these areas at its meeting later in the year.

COAG also agreed the report of the investigation into Indigenous land administration and use would be provided to the late 2015 COAG meeting.

Extract from COAG Communiqué, 11 December 2015

Indigenous economic development

Leaders agreed to the development of a new strategic framework that puts Indigenous economic participation at the heart of the national agenda, recognising that economic participation underpinned by cultural participation leads to improved social outcomes. The framework will drive genuine cooperation, including with Indigenous leaders, to ensure we learn from and share what works. It will also support an increased focus on place-based solutions. This will support increased economic independence and reduced reliance on welfare, and help achieve Closing the Gap targets.

Early childhood and school education are both critical in opening future economic opportunities for Indigenous children. COAG agreed to prioritise and accelerate efforts in this area, and set a new early childhood education Closing the Gap target of 95 per cent enrolment for all Indigenous four year olds by 2025, extending beyond the expired 2013 target for remote communities.

COAG welcomed Northern Territory Chief Minister Giles's proposal for more targeted national and bilateral action to boost Indigenous participation. Leaders will discuss a range of actions at their next meeting, featuring innovative approaches to procurement that promote entrepreneurialism and real jobs.

COAG considered the report of the investigation into Indigenous land administration and use that it commissioned in October last year. To better enable Indigenous land owners and native title holders to use rights in land for economic development, jurisdictions will implement the recommendations of this report subject to their unique circumstances and resource constraints.

All jurisdictions reaffirmed their shared commitment to the recognition of Aboriginal and Torres Strait Islander peoples in the Commonwealth Constitution, and noted the Commonwealth's announcement of a Referendum Council to lead a significant national

consultation process on recognition. COAG noted the importance of state and territory governments being engaged in this national consultation process, and Premiers and Chief Ministers agreed to participate.

Extract from COAG Communiqué, 1 April 2016

Indigenous economic development

COAG welcomed progress toward an Indigenous Economic Development Framework. Leaders agreed it is important to engage with Indigenous leaders and communities to support its further development.

COAG discussed and supported Indigenous procurement policies as they can provide better opportunities for Indigenous Australians to engage in the economy, increase employment prospects, and be less reliant on welfare.

Leaders will work in partnership to develop strategies to improve educational outcomes for Indigenous students. Leaders noted that if a further 640 Indigenous children, nation-wide, met the Year 3 reading national minimum standard, we could halve the gap.

Leaders also agreed to work in partnership with Indigenous leaders and communities, consistent with the principles of empowering communities. This is important to securing better informed decisions and transparency around government efforts to improve community outcomes.

There are still disproportionately high incarceration and re-offending rates for Indigenous Australians. COAG further agreed to develop ways to address barriers to employment on release and to support Indigenous people as they transition from incarceration to employment. The Commonwealth will undertake initiatives with states, drawing on existing programs.

Appendix 2 Aboriginal and Torres Strait Islander populations and language use

This appendix provides contextual data on the Aboriginal and Torres Strait Islander and non-Indigenous Australian populations, to aid interpretation of data elsewhere in the report. It complements the contextual information presented in chapter 3. This appendix also contains 2011 Census data on Indigenous language use. Data from the 2016 Census are anticipated to be available from late 2017.

Aboriginal and Torres Strait Islander population

Population estimates in this report are based on 2011 Census of Population and Housing counts, adjusted for net undercount as measured by the ABS Post Enumeration Survey (ABS 2013).

Figure A2.1 **Proportion of the population in each age group, 2011**

Source: ABS 2013, *Estimates of Aboriginal and Torres Strait Islander Australians, June 2011*, Cat. no. 3238.0.55.001; table A.1.

According to estimates of the Australian population in 2011:

- the Aboriginal and Torres Strait Islander population had a very different age structure to the non-Indigenous population. The Aboriginal and Torres Strait Islander population tended to be younger, with 35.9 per cent aged 0–14 years, compared to 18.4 per cent of the non-Indigenous population (figure A2.1)
- the proportion of the Aboriginal and Torres Strait Islander population aged 75 years and over was 1.0 per cent, compared with 6.5 per cent of the non-Indigenous population (figure A2.1)
- the different age structures of the populations was also reflected in their median (midpoint) ages. The median age of the Aboriginal and Torres Strait Islander population was 21.8 years, compared with a median age of 37.6 years for the non-Indigenous population (table A.1).

Figure A2.2 Proportion of the population in each remoteness area, 2011

Source: ABS 2013, *Estimates of Aboriginal and Torres Strait Islander Australians, June 2011*, Cat. no. 3238.0.55.001; table A.2.

The two populations also differed in their geographic distribution. In 2011, although the majority of both populations lived in major cities and regional areas, a much higher proportion of the Aboriginal and Torres Strait Islander population lived in remote and very remote areas (21.3 per cent, compared with 1.7 per cent of the non-Indigenous population (figure A2.2).

Figure A2.3 **Proportion of each State and Territory population who were Aboriginal and Torres Strait Islander, 2011**

Source: ABS 2013, *Estimates of Aboriginal and Torres Strait Islander Australians, June 2011*, Cat. no. 3238.0.55.001; table A.2.

The proportion of the population who were Aboriginal and Torres Strait Islander differed across jurisdictions. The NT had the highest proportion of its population who were Aboriginal and Torres Strait Islander (29.8 per cent) and Victoria had the lowest (0.9 per cent) (figure A2.3).

The largest proportion of the national Aboriginal and Torres Strait Islander population lived in NSW (31.1 per cent). Other jurisdictions with relatively large Aboriginal and Torres Strait Islander populations (greater than 10 per cent) were Queensland, WA and the NT (see chapter 3, figure 3.3.1; table A.2).

Data on Aboriginal and Torres Strait Islander population estimates and projections from 2001–2014 can be found in table A.3.

Use of Indigenous languages

The use of Indigenous languages is relevant to many areas of the report, but particularly the ‘Governance, leadership and culture’ strategic area (chapter 5). It is estimated that around 250 languages were spoken by Aboriginal and Torres Strait Islander Australians prior to European settlement, but today only around 120 languages are still spoken (AIATSIS and FATSIL 2005; Marmion, Obata and Troy 2014).

Although language revitalisation and maintenance is crucial to preserving and strengthening traditional culture and people's identity and wellbeing (see section 5.5), a lack of proficiency in English can create barriers to education (section 7.1 and 7.3), employment (section 4.6) and access to services (section 8.1 on primary health care). The indicator on engagement with services (section 5.3) includes information on difficulty understanding, or being understood by, service providers.

Figure A2.4 Language spoken at home by Aboriginal and Torres Strait Islander people, 2011^a

^a Aboriginal and Torres Strait Islander people who did not state what language they spoke at home are excluded from the analysis.

Source: ABS (unpublished) 2011 Census of Population and Housing; table A.4.

Nationally in 2011, 11.6 per cent of the Aboriginal and Torres Strait Islander population spoke an Indigenous language at home. This proportion varied across states and territories. The NT had the highest proportion (64.7 per cent) and Tasmania had the lowest (0.3 per cent) (figure A2.4).

The proportion of Aboriginal and Torres Strait Islander Australians who spoke an Indigenous language at home also differed across remoteness areas and age groups. Very remote areas had the highest proportion of Indigenous language speakers (61.5 per cent) and inner regional areas had the lowest proportion (1.0 per cent) (figure A2.5).

Figure A2.5 **Proportion of Aboriginal and Torres Strait Islander people who spoke an Indigenous language at home, by remoteness area and age, 2011^a**

^a Aboriginal and Torres Strait Islander people who did not state what language they spoke at home are excluded from the analysis.

Source: ABS (unpublished) 2011 Census of Population and Housing; table A.5.

Figure A2.6 **Aboriginal and Torres Strait Islander people who spoke an Indigenous language at home, by remoteness area and English proficiency, 2011**

Source: ABS (unpublished) 2011 Census of Population and Housing; table A.5.

The majority of Aboriginal and Torres Strait Islander Australians who spoke an Indigenous language at home also spoke English well or very well (81.6 per cent). However, one in six Indigenous language speakers said they did not speak English well, or at all (figure A2.6). Children aged 0–14 years accounted for more than half (59.7 per cent) of all people who spoke an Indigenous language at home and who did not speak English well or at all (table A.5).

Attachment tables

Attachment tables are identified in references throughout this appendix by an ‘A’ prefix (for example, table A.2 is table 2 in the attachment tables for this appendix). These tables can be found on the web page (www.pc.gov.au/oid2016).

Table A.2 **Estimated resident population, by remoteness areas and Indigenous status, 2011 (a)**

	<i>Unit</i>	<i>Aboriginal and Torres Strait Islander</i>	<i>Non-Indigenous</i>	<i>Total</i>
Remote	%	7.7	1.2	1.4
Very Remote	%	13.7	0.5	0.9
Total	%	100.0	100.0	100.0

(a) Some states and territories do not have all five remoteness classifications.

(b) For confidentiality purposes, the outer regional and remote areas of Victoria have been combined.

(c) Data for Tasmania available to age 65 years and over only. There is no major cities area in Tasmania. For confidentiality purposes, the outer regional, remote and very remote area have been combined.

(d) For the ACT, major cities and the inner regional areas have been combined. The ACT does not have outer regional, remote or very remote areas.

(e) The NT does not have major cities or inner regional areas.

(f) Includes other territories.

(a) Includes persons with no usual address and persons enumerated in migratory collection districts, as a result components may not add to total.

(b) Includes cases where language spoken at home was stated but proficiency in spoken English was not stated.

(c) Includes persons whose language spoken at home was inadequately described.

(d) Excludes persons whose language spoken at home was not stated.

– Nil or rounded to zero.

Appendix 3 Data limitations

This appendix is designed to assist readers in their interpretation of data used in this report. General information on the different types of data sources (Census, sample surveys and administrative data) is included in chapter 3, along with specific information on the ABS Census of Population and Housing and the ABS Aboriginal and Torres Strait Islander household surveys. Information on other key collections used in this report is provided below.

ABS mortality data

Caution should be exercised when undertaking analysis of Aboriginal and Torres Strait Islander deaths data, particularly trends in mortality.

The registration of deaths is the responsibility of registrars in individual states and territories. State and Territory registrars supply this information to the ABS for compilation into aggregate mortality statistics. Although it is considered that most Aboriginal and Torres Strait Islander deaths are registered, not all Aboriginal and Torres Strait Islander Australians are identified as such in deaths data. The likelihood that a person will be identified as being of Aboriginal and Torres Strait Islander origin is influenced by a range of factors including: who completes the form; perception of the information use; education programs on the importance of identifying and perceptions about the consequences of identifying (ABS 2015).

The ABS carried out research linking Census records and deaths registrations following the 2006 and 2011 Censuses. The proportion of people identified as Aboriginal and Torres Strait Islander in the Census but not in deaths records increased from 20 per cent in 2006 to 24 per cent in 2011. The ABS considered that this was consistent with the increase in the count of Aboriginal and Torres Strait Islander Australians across the two Censuses (ABS 2013b).

Mortality data in this report are presented with variability bands. The variability bands are used to account for natural random variations in counts, and provide a 95 per cent confidence interval. Variability bands should be used for the purposes of comparisons at a point in time and over time. They should not be used for comparing mortality rates across jurisdictions at a single point in time, as the variability bands and mortality rates do not take into account differences in under-identification of Aboriginal and Torres Strait Islander deaths across jurisdictions.

Life expectancy data

Life tables used to calculate life expectancy estimates are available for the populations of NSW, Queensland, WA, the NT and Australia as a whole. (Due to the small number of Aboriginal and Torres Strait Islander deaths in Victoria, SA, Tasmania and the ACT, it is not currently possible to construct life tables for these jurisdictions.)

To account for the Aboriginal and Torres Strait Islander under-identification in deaths registrations, the numbers of Aboriginal and Torres Strait Islander deaths have been adjusted according to the factors derived from the ABS Census Data Enhancement (CDE) study. The factors are based on the 2011 CDE study, and therefore 2006 and 2011 life expectancy estimates are not directly comparable. ABS revised the 2005–2007 life tables which are comparable to the 2010–2012 life tables. These revised tables are included in section 4.1 in this report.

A further improvement was made to the method for calculating Aboriginal and Torres Strait Islander life tables at the Australia level for the period 2010–2012. The method now takes age-specific identification rates into account when calculating the under-identification adjustment. A separate Australian total is provided for 2010–2012 and 2005–2007 on this basis (but this improved method cannot currently be applied to State and Territory or remoteness life tables).

Hospitalisations data

Hospitalisations data are from the National Hospital Morbidity Database (NHMD), a national collection of hospitalisation records maintained by the AIHW. Health departments in all states and territories provide the AIHW with information on the characteristics, diagnosis and care of admitted patients from almost all hospitals, including public acute and psychiatric hospitals, private acute and psychiatric hospitals, and private free-standing day hospital facilities.

Hospitalisations include admissions that result in discharges, transfers, deaths or changes in the type or episode of care (defined in the database as hospital separations). A record is included for each hospitalisation, not for each patient, so patients who are admitted more than once in a year have more than one record in the database. Due to the high rates of end-stage renal disease requiring frequent dialysis treatment among Aboriginal and Torres Strait Islander Australians, it is important to separate hospitalisation rates for dialysis from rates for other conditions.

Overall, the quality of Aboriginal and Torres Strait Islander identification in hospital separations data has improved in recent years and data for all states and territories can be reported for national analyses of hospitalisations from 2010-11 onwards (AIHW 2013) (prior to this data were only combined for six jurisdictions). For this report, data for the non-Indigenous population are only reported from 2012-13 onwards (for prior years the data are presented for ‘other’ which includes non-Indigenous Australians and those for

whom Indigenous status is unknown or not stated), except for reporting against potentially preventable hospitalisations (section 8.2) where data are reported for the non-Indigenous population from 2010-11 onwards (the exception is WA for which records with an unknown Indigenous status are reported as non-Indigenous for all years). To enable time series reporting by Indigenous status, data on ‘other’ are reported for six jurisdictions for the current reporting period back to 2004-05.

The following should be used to guide interpretation of the hospitalisations data.

- Each State and Territory has a unique demographic structure, and factors such as age and Aboriginal and Torres Strait Islander status can have an effect on the nature of health care delivery. The frequency of particular procedures, for example, can be affected by the demographic composition of the population (AIHW 2005).
- Although data on hospitalisations from the NHMD can reflect an aspect of the burden of disease in the community, they do not usually provide measures of the incidence or prevalence of conditions. This is because not all people with a particular condition or degree of illness are treated in hospital, and there are multiple admissions for some chronic conditions. Also, the number and pattern of hospitalisations can be affected by differing admission practices, and differing levels and patterns of service provision (AIHW 2005).
- Episodes of care for non-admitted patients treated in hospital in emergency department or outpatient clinics are not included in the hospitalisations counts.

National Perinatal Data Collection

Data on pregnancy and childbirth are sourced from the National Perinatal Data Collection (NPDC), a collection maintained by the AIHW comprising of data items as specified in the Perinatal National Minimum Data Set (NMDS), plus additional items collected by the State and Territories. From 2011, the Indigenous status of the baby (that is, the mother and/or father has identified as being of Aboriginal and/or Torres Strait Islander origin) has been collected. Previously the Indigenous status of the baby was only available based on the Indigenous status of the mother, leading to an underestimate of Aboriginal and Torres Strait Islander births. For around 6 per cent of births the Indigenous status is unknown, due to unknown Indigenous status of the father. Identification of the father is not compulsory on birth registrations.

The accuracy of Aboriginal and Torres Strait Islander identification in the NPDC has not been formally assessed and is likely to vary across jurisdictions.

Australian Institute of Criminology (AIC) homicide data and other police data

The National Homicide Monitoring Program (NHMP) is funded by the Australian Government. The data (and tabulations) used in this publication were made available through the Australian Institute of Criminology (AIC). These data were originally collected by the AIC with the assistance of each of Australia's Police Services. Neither the police, nor the AIC bear any responsibility for the analysis or interpretations presented in this report.

NHMP data are derived from police records, which depend on the police accurately recording the Indigenous status of the victim and offender. In some jurisdictions this may involve the police making a subjective assessment based solely on the victim's or offender's appearance, which might lead to errors and inconsistencies. In other jurisdictions, Indigenous status is determined by police administering a standard question, but not all Aboriginal and Torres Strait Islander Australians may choose to identify when asked by police.

In addition to NHMP data, police data are included in sections 4.12 (Family and community violence) and 11.3 (Juvenile diversions).
