Dear whom may concern,

I am a father and grand father and very concern about screening baby from 0 - 3 yrs old for "mental illness". I don't understand why! Baby cry when hungry, some want to sleep with the light on. and if they don't get what they want they will throw a tantrum.

This is a childhood normality - and then you will get them ~~the~~ psychiatric drugs.

This will destroy our generation Australia has the highest rate of antidepressant use in the world. (excluding the US) 1 in 10 Australians taking them. It's scary!

my niece was given antidepressant and she put on 40 kgs and have to take diabetic medication. makes her so fat and can't think and slow person now she has become the target of psych drug and she was a beautiful girl with bright future and not any more.

I pray to God that this won't get approved! Thank you for your attention.
