

# Official Complaint on New Mental Illness Law

To whom it may concern,

As a parent, the idea of sending 0-3 year olds to be screened for mental illness is absurd. I would never give my child a drug which has as it's listed side affects violence and suicide.

I am not in favor of drug companies expanding their market share into 0-3 year olds. This is an attempt to addict young children to drugs. Yes, these drugs are addictive.

If you ask me, this is completely criminal. It is drugging children under the guise of help. I cannot express enough how against this I am. I hope that whoever reads this has at least a little bit of sanity left in them that they can see how ridiculous giving addictive drugs to 0-3 year olds is.

Thank you,

John Miller
