

Dear Commissioners,

I am writing to you with regards to the inquiry that is currently being conducted into mental health.

As a mother of 4 children I am deeply in disagreement with the Psychiatric Drugging of children from zero - three, but also any child being prescribed mind altering drugs.

This sort of drugging on such small bodies can absolutely inflict damage.

once this is done where do we go from here?

a baby who can't talk can't possibly be deemed needing drugs. once this is done this

is life long, what will be of our society.

A baby can't even drink cow's milk yet

it is being proposed that we drug our children.

As a mother of 4, having worked in a school and being around children EVERY day, I am

finding it difficult to fathom why this is

even being considered. Child vary, happy, sad

energetic, angry sometimes. But with love, good nutrition most ~~peopl~~ problems can be overcome.

As someone who worked at school I have ~~an~~ handled at bests, upsets, bullying etc none of these children are on drugs and all are handled easily.

to be trying to drug a baby/toddler makes me sick to my stomach. The damage that will be done to even a young child/baby will be irreversible.

please I beg, do not do this. Do not allow our babies to be drugged. Do not go ahead with this screening that holds no scientific proof.

Thank you for your time.

Kind regards

Anna Vall.  
MOTHER.
