

Dear sir / madam!

I'm mum of the child and I been shocked when I heard, some "clever" people want to poison so small children by psycho - pills (maybe liquid).

And when I try to find reason of that craziness I found explanation - that because:

if child crying, child have irregular feeding, sleep not well - it is the reason to worry - and the reason to predict mental condition in the future.

I'm completely disagree - because to poison child's developing brain - it can really cause mental problem in the future...

Instead of preventing it - you will
create it!!!

It's absolutely normal - if child
crying, eat not regularly, wake up
at the night. Parents have to
learn how to help baby, but not
to be lazy and just give poison
instead.

It's cause a big problem for whole
nation - it create more mental
around us and we have to live
in that crazy community.

PLEASE STOP IT RIGHT
NOW!!!
