

11-1-20

Dear Commissioners,

I am extremely disturbed about

the inquiry into mental Health about the screening of 0-3 year olds.

Money is being spent on psychiatric drugs and invasive damaging electroshock treatment. All of these treatments damage and harm the potential of the person.

These treatments are not based on any scientific evidence.

Children 0-3 do not need mental health screening that is not based on any scientific evidence or proof.

Children 0-3 need good parenting, good nutrition and a safe place to be

encouraged and helped along with study to grow up to be able and capable young

adults.

Also drugging of children - ~~and~~ antidepressants!

antipsychotics and ADHD drugs are not known
to improve the wellbeing of children as it
isn't based on any scientific evidence or proof
It is criminal to allow the funding to
continue for mental health of the taxpayers
money.

All this is costing the taxpayers and
creating adverse effects to our future
generation of children. And isn't producing
good results

Yours Sincerely,

S. Carr.

(Aunt of seven nieces and nephews)
