

Dear Productivity Commission,

11 Jan 2022

I have recently heard about your proposal to screen young children for mental health as young as 3 year old. I can not understand this proposal & I would like to state my disagreement. I know when my children were young they needed love & understanding. I have seen children scream & throw themselves on the ground when they needed sleep & a good dinner.

I have seen documentaries on mental health & would not recommend that our children be drugged. I worry when I see small children who are on heavy medication, they look dazed & confused. One small boy I saw could not stay awake his small body could not cope with the medication.

I would strongly disagree with the screening of our future leaders.

Yours sincerely  
Dana Anderson.
