

Peter Hessey
Supplementary submission

FURTHER TO THE BROADCASTING DRAFT REPORT.

Dear Sirs.

[1] Further to my submission 122 of 19th June I request your deeper consideration of two areas in a complex matter of vast import to this nation and any hope of ever being a clever country. In this my concern is only **knowledge**, not free to air entertainment, if found.

[2] Firstly, I plead that you require mid level standard of High Definition Television in the digital spectrum, as I understand both U.S.A. and the U.K. have decided. It is pointless to be out of step in accelerating global communications and I believe far cheaper and thus available to far more citizens

[3] Secondly, the current possible costs of any University Degree is a denial of **learning** that will prevent many intelligent minds the right to imagine and invent, perhaps even **produce**, in **this** country instead of it being done elsewhere. The internet is becoming a controller of many matters. Yet with determined wisdom we can educate every person, ageless, by Digital Broadcast. Please do not waste it all on free to air.

[4] The digital spectrum has vast data availability, do not deny the nation the future.

[5] **A Super Regulator could, and must, impose the content of a new digital channel giving CURRENT encyclopaedic knowledge available to all at little cost.**

[6] With every hope for immediate political action to ensure the future of our young.

Peter Hessey.
