

Natural Disaster Funding
Public inquiry
SUBMISSION a quad solution

Foreword

The only BANKABLE baseline assets of mankind and all living matter; SOIL-WATER-VEGETATION-ATMOSPHERE (SWVA) all else (all) are commodities including the tool “money”!

While Charles Darwin made comments on the fire-stick burning damage he clearly recorded “the land, managed back to a recycle soil-vegetation régime a sustainable balance to grow perpetual crops and grazing, possible”!

Public inquiries albeit spending on natural disaster the protocol baseline scopes are limited within a single department e.g. Water /land/ infrastructure services not as a one critical unit.

Critical baseline understanding is “when man funds and builds a home he perpetually paints, maintains it”. Yet, from time in memorial Man has stripped (SWVA) to the point in 1990 UNCCD advised such assets were damaged 60%. The human body dies with 60% damage. The Earth is a living organ in pain (global media May 7 2014)!

We are not managing-running “Australia Inc” as if it was our only perpetual Home and Business!

While Ministers Hockey and Abbott strive to restore the National Monetary Funds to preserve our fiscal standing, we cannot continue with the ill founded historical ad-hoc environmental “reparation-disaster”! We need to address the problem cause effects- solution.

If we are to stop Bankers from quick recovery of their ill-founded monetary advice investments into the Farm community and by now, selling to off-shore nations (also suffering stripped soils-vegetation -water) then, as a people looking to restore a sustainable future, we need to, “minimize anthropogenic natural disasters” by, restoring the above baseline assets for and on behalf of the “historians of tomorrow”!

From first-hand experience* I know the foreign farm buyers look only to make short term money profit! Without decades of land management experience they and the Great Nation of Australia will lose much! Since 2005 as invited foreign expert adviser to PRC (taking time with the UN to tour Mongolia and UNEP Nairobi 1st food security assembly and mitigation assembly and now M E nations) to lead in desert reversal to grow soil soil-carbon food fodder. The UN top administration today is in crisis meeting “**how to feed 3.5 billion living in poverty and stop wars! How to lower CO2e! How to stop mass migration!** Funding natural disaster is mandatory but, as the baseline assets further decline so it is without “the coat of paint” repetitive expanding demise is certain!

Bankers seeking to keep jobs are “selling off the farm” as opposed to capitalize of the “sadly booming global repetitive expanding food fodder forestry markets. Frankly the only buyers of foreclosed properties will be, cashed up foreign desert nations prepared to strip the remaining assets/soil to maximize returns.

From fire-stick burning to “broad acre” farming (BAF) as a people we have aided and abetted stripping transpiring soil vegetation!

Like the rest of the planet we are witnessing the expanding deserts, unemployed, the loss of food, fodder, forestry growth! (**World News May 7 2014**)

Government’s follow traditional thinking is to “recover” compounding national debt rather than “Build the national business assets SWVA”. No private business can direct reparation of the only assets (SWVA) so a new route a Global / National Perpetual Trust to manage all is mandatory!

Natural disaster! Simple research discloses the fact via anthropogenic disaster we have so defied billions of years of stable sustainable environs where self reparation took place! Darwin et al conclude unplanned rapid land water changes without offsets come at a high likely irreversible cost!

This nation was built by Farmers Herders’! We fed the world for 150 years! Older nations have over-cropped -grazed deforested! Now we are closely following such nations, or, subject to New Thinking top down -bottom up we can within 2-5 years feed the world again for a fee. Rough costing enclosed!

Australian Mining Manufacturing has a closing horizon where “developing nations” expand!

Who has the farm gate key we need to restore Australia Inc as a nation a business?

Natural Disaster *Funding-Funding*:
Natural disasters are in essence Anthropogenic

While the nation is in self recrimination/analyzing we need to think laterally! If Australia Inc was a business the receiver would asks “what made the business great and, can it be returned to sustainability”. Tell Bankers closing on Farms to hold off or transfer to another Bank with business, building, training, vision! (See Income below)

Goal Drought-proof again, re-charge the catchments, restart the carbon cycle, the rain and element cycles!
Of the **SWVA** reparation we start with asset Atmospheric reparation (lower CO₂e).

- From water coast windward, we plant out the #2-6% of native transpiring vegetation to sequester 40Tonne CO₂ per annum. It lives beyond the UN 100 year’s life capacity to sequester CO₂e. We decided in UNCTAD 1997 the needed was to offset expected life use of coal. Note: The emissions Nox- Sox via the Sun’s radiation becomes life essential nitrates sulfates to breathe and sequester!
- We follow the logic of transpiring vegetation to excite rain to the upper catchments! Since there is a mass of abandon “Farm-army-exhausted land” then once the soil growth under the vegetation is apparent then farm-land #crop planting is for 4 years, followed by, 3 yrs rest to allow # CO₂ sequestering vegetation to restore soil and elements! Well planned with regenerating soils and elements over the total environ we have certifiable UNFCCC Kyoto soil soil-**carbon to trade!**
- UN Secretary General Ban Ki Moon in concert with EU executive cancelled 1 billion uncertified carbon credits and put in place UNFCCC Kyoto CO₂ offset protocol demanding registration verification of all offsets (in our case CO₂e sinks).
- Now we know 600 million hectares of the nation’s base asset soil water vegetation are damaged. Say we copy PRC and reverse 200million hectares say we commence with Farmer Herders in Queensland / WA.

Say we settle a protocol of delivering projected payments with the foreclosing Bankers demanding Farmers Herders address their overdraft start with lands coast to catchments. (Paint the House).

MODEL

- Serious region joins with Bankers (and Government) but under an Eminent Person Perpetual Trust to manage serious income-carbon storage growth and yielding monies for UN 100yrs. Key Farmers Government and representatives of the Banks sit on the Trust along with CO₂ buyers (I sat together on UNCTAD with global CO₂e emitters/ 97-02).
- Start with the most serious drought anthropogenic desert sand area Queensland and WA. Each with say 100,000,000 hectares!
- Trust members will realize we must start windward at the sea to plant out the high sequestering CO₂ vegetation at \$20.00 tonne (some reports use the costing carbon C not CO₂. Carbon \$5.50
- (1) Income; 40tonne CO₂ x \$20.00 t CO₂= \$800.00 income per hectare mean annual NPV. Assume the 200,000,000 hectares planted initially as soil generation CO₂ sink =S160,000,000,000 annual (less audits pay Farmers/planter’s and further plantings.
- (2) Sequestering 8,000,000,000 tonne CO₂ annually sequestered. (Help stall global impacts).
- (3) Employ 200,000 people 2 yrs to plant out sink a further yr to start crops and upgrades. One trained farmer engages up to 8 from soil to table.
- (4) Operating under their collective farming Cooperative the above income doubled we can actually increase DSE x5+.
- Additional pluses (a) aid in feeding nations in poverty gaining foreign incomes. (b) Farmers and communities recover financially (c) the annual minimum sequestration stalls CO₂ build-up (d) Dust storms retarded (e) transpiring rainfall to catchments.

Bottom Line

As a nation we keep finding pockets of money to fund anthropogenic disasters! If we were under a business approach we could not only reduce disasters but, we would have income by lowering global CO_{2e} and have verifiable contracted incomes to dramatically lower the Nations' overdraft. We would have employed many and a super bonus exported milk grain food fodder and in time forestry produces.

This month May the Global news is, climate change has impact all sectors of the planet
Notes; Need to know be it disaster funding (reparation) be it restoration of catchments and sequester CO_{2e}

2-6% of Earths vegetation sequesters CO₂. 2-4% known as C4 and 2% CAM pathway
96% of Earth's vegetation--Trees rice cotton most grains vegetables are C3 photosynthesis pathway taking biomass carbon from soil not the atmosphere!

May 7 2014

*2005 PRC central Government appointed me as Foreign Expert. Teach Agriculture Forestry Science Law Universities and lead Farmers Herders and Governors to grow soil food fodder and in time forestry in deserts. The Australian Government permits off-shore nations to buy farm properties with no controls on preservation of soil water vegetations.
