(c) "Remote" is an aggregation of the following ABS remoteness areas: Remote and Very remote.

(d) The proportion of Aboriginal and Torres Strait Islander healthcare professionals as a share of the total healthcare professional population is calculated by dividing the number of Aboriginal and Torres Strait Islander healthcare professionals by the total number of healthcare professionals and multiplying by 100.

nfd Not further defined.

Note: 2011 and 2016 Census data have been sourced by the Productivity Commission from TableBuilder.

(b) "Non-remote" is an aggregation of the following ABS remoteness areas: Major cities, Inner regional and Outer regional.

(c) "Remote" is an aggregation of the following ABS remoteness areas: Remote and Very remote.

(d) The proportion of Aboriginal and Torres Strait Islander healthcare professionals as a share of the total healthcare professional population is calculated by dividing the number of Aboriginal and Torres Strait Islander healthcare professionals by the total number of healthcare professionals and multiplying by 100.

nfd Not further defined.

Note: 2006, 2011 and 2016 Census data have been sourced by the Productivity Commission from TableBuilder.

| Vaccine-preventable conditions | .. | .. | .. | .. | 2.0 | 2.5 | 8.6 | 4.0 |
| Sexually transmitted conditions | .. | .. | .. | .. | 2.2 | 3.3 | 17.3 | 6.2 |
| Conditions caused by injury and poisoning | .. | .. | .. | .. | 1.2 | 1.2 | 2.4 | 1.6 |

- (a) Categories are based on ICD-10–AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). See table 8A.2.3 for the ICD-10–AM codes used to classify potentially preventable conditions.
- (b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) from 2012–13 onward and the Australian Standard Geographical Classification (ASGC) prior to 2012–13, and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.
- (c) Data are from public and private hospitals in all jurisdictions.
- (d) Data exclude hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital', to adjust for separations recorded on both sides of contractual care arrangements.

TABLE 8A.2.1

Table 8A.2.1 **Potentially preventable hospitalisations, by condition type, by Indigenous status, by remoteness, 2010–12 and 2016–2018 (a), (b), (c), (d), (e)**

| | Aboriginal and Torres Strait Islander | | | | Non-Indigenous (f) | | | |
|--|---------------------------------------|--|--|----------------------------|---------------------|--|--|----------------------------|
| | <i>Major cities</i> | <i>Inner and outer regional combined</i> | <i>Remote and very remote combined</i> | <i>Total Australia</i> | <i>Major cities</i> | <i>Inner and outer regional combined</i> | <i>Remote and very remote combined</i> | <i>Total Australia</i> |

(e) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. As these data span two years, the population denominator used in calculating rates is a weighted sum of June year population estimates. For 2016–2018 this includes 50% of the population as at 30 June 2016, 100% of the population as at 30 June 2017 and 50% of the population at 30 June 2018. Numbers of hospitalisation used to calculate rates are total hospitalisations for two year periods. For 2016–2018, data include hospitalisations from 1 July 2016 to 30 June 2018.

(f) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated).

(g) Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus.

(h) Rate ratio is the age-standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the age-standardised non-Indigenous hospitalisation rate.

Table 8A.2.3 **List of ICD-10–AM codes used to define categories of potentially preventable hospitalisations (a)**

| <i>Category</i> | <i>Condition</i> | <i>ICD-10–AM codes</i> | <i>Notes</i> |
|-----------------|--|--|--|
| Chronic | | | |
| | Asthma | J45, J46 | As principal diagnosis. Exclude children aged less than 4 years |
| | Congestive cardiac failure (b) | I50, I11.0, J81 | As principal diagnosis. Exclude cases with cardiac procedure codes as footnoted below. |
| | Diabetes complications | E10.0–E10.9, E11.0–E11.9, E13.0–E13.9, E14.0–E14.9 | As principal diagnosis |
| | COPD | J20, J41–J44 | As principal diagnosis. Include J20 only if with additional diagnoses of J41–J44. |
| | Bronchiectasis | J47, J20 | As principal diagnosis. Include J20 only if with additional diagnosis of J47. |
| | Angina (b) | I20, I24.0, I24.8, I24.9 | As principal diagnosis. Exclude cases with cardiac procedure codes as footnoted below. |
| | Iron deficiency anaemia | D50.1, D50.8, D50.9 | As principal diagnosis |
| | Hypertension (b) | I10, I11.9 | As principal diagnosis. Exclude cases with cardiac procedure codes as footnoted below. |
| | Nutritional deficiencies | E40–E43, E55.0 | As principal diagnosis |
| | Rheumatic heart diseases | I00–I02, I05–I09 | As principal diagnosis |
| Acute | | | |
| | Pneumonia (not vaccine-preventable) | J15.3, J15.4, J15.7, J16.0 | In any diagnosis. Exclude people under 2 months. |
| | Urinary tract infections, including pyelonephritis | N10–N12, N13.6, N15.1, N15.9, N28.9, N39.0, N39.9 | As principal diagnosis |
| | Perforated/bleeding ulcer | K25.0–K25.2, K25.4–K25.6, K26.0–K26.2, K26.4–K26.6, K27.0–K27.2, K27.4–K27.6, K28.0–K28.2, K28.4–K28.6 | As principal diagnosis |

Table 8A.2.3 **List of ICD-10–AM codes used to define categories of potentially preventable hospitalisations (a)**

| <i>Category</i> | <i>Condition</i> | <i>ICD-10–AM codes</i> | <i>Notes</i> |
|--|--|--|--|
| | Cellulitis (c) | L02–L04, L08, L88, L98.0, L98.3 | As principal diagnosis. Exclude cases with procedure codes as footnoted below and this is the only listed procedure. |
| | Pelvic inflammatory disease | N70, N73, N74 | As principal diagnosis |
| | Ear, nose and throat infections | H66, J02, J03, J06, J31.2 | As principal diagnosis |
| | Dental conditions | K02–K06, K08, K09.8, K09.9, K12, K13, K14.0 | As principal diagnosis |
| | Convulsions and epilepsy | G40, G41, R56 | As principal diagnosis |
| | Eclampsia | O15 | As principal diagnosis |
| | Gangrene | R02, I70.24, E09.52 | R02 in any diagnosis, I70.24 and E09.52 as principal diagnosis only |
| Vaccine preventable | | | |
| | Influenza (vaccine-preventable) | J10, J11 | In any diagnosis. Exclude people under 2 months. |
| | Pneumonia (vaccine-preventable) | J13, J14 | In any diagnosis. Exclude people under 2 months. |
| | Other vaccine-preventable conditions (d) | A08.0, A35, A36, A37, A80, B01, B05, B06, B16.1, B16.9, B26, G00.0 | In any diagnosis |
| Sexual mode of transmission | | | |
| | Syphilis | A50–A53 | In any diagnosis |
| | Gonococcal infection | A54 | In any diagnosis |
| | Chlamydial infection | A55, A56 | In any diagnosis |
| | Other sexually transmitted diseases | A57–A64 | In any diagnosis |
| Injury, poisoning and certain other consequences of external causes | | | |
| | Assault | X85–Y09 | As principal diagnosis |
| | Falls | W00–W19 | As principal diagnosis |
| | Exposure to inanimate mechanical forces | W20–W49 | As principal diagnosis |

Table 8A.2.3 **List of ICD-10–AM codes used to define categories of potentially preventable hospitalisations (a)**

| <i>Category</i> | <i>Condition</i> | <i>ICD-10–AM codes</i> | <i>Notes</i> |
|-----------------|--|------------------------------------|------------------------|
| | Complications of medical and surgical care | Y40–Y84 | As principal diagnosis |
| | Transport accidents | V00–V99 | As principal diagnosis |
| | Other accidental exposures | W65–W74, W75–W84, X50–X57, X58–X59 | As principal diagnosis |
| | Intentional self-harm | X60–X84 | As principal diagnosis |
| | Exposure to animate mechanical forces | W50–W64 | As principal diagnosis |
| | Exposure to electric current, radiation and extreme ambient air temperature and pressure | W85–W99 | As principal diagnosis |
| | Exposure to smoke, fire and flames | X00–X09 | As principal diagnosis |
| | Contact with heat and hot substances | X10–X19 | As principal diagnosis |
| | Contact with venomous animals and plants | X20–X29 | As principal diagnosis |
| | Exposure to forces of nature | X30–X39 | As principal diagnosis |
| | Accidental poisoning by and exposure to noxious substances | X40–X49 | As principal diagnosis |
| | Other external causes | Y10–Y34, Y35–Y36, Y85–Y89, Y90–Y98 | As principal diagnosis |

(a) This list of disease codes is the same list used to classify preventable diseases in the Aboriginal and Torres Strait Islander Health Performance Framework.

(b) Exclude cases with the following cardiac procedure codes: Blocks 600–606, 608–650, 653–657, 660–664, 666, 669–682, 684–691, 693, 705–707, 717 and codes 33172–00[715], 33827–01[733], 34800–00[726], 35412–00[11], 38721–01[733], 90217–02[734], 90215–02[732].

(c) Exclude cases with any procedure except those in blocks 1820 to 2016, or if procedure is 30216–00[1604], 30216–01[1604], 30216–02[1604], 30676–00[1659], 30223–01[1606], 30223–02[1606], 30064–00[1605], 90660–00[1602], 90661–00[1608], and this is the only listed procedure.

Table 8A.2.3 List of ICD-10–AM codes used to define categories of potentially preventable hospitalisations (a)

| <i>Category</i> | <i>Condition</i> | <i>ICD-10–AM codes</i> | <i>Notes</i> |
|-----------------|---|------------------------|--------------|
| (d) | Cases of chronic viral hepatitis B (ICD codes B18.0 and B18.1) have been excluded from the list of vaccine-preventable diagnoses, since these codes are generally recorded whenever a patient has a history of viral hepatitis B. This differs from the standard list of codes used for identifying vaccine-preventable potentially preventable hospitalisations. | | |

- (a) Categories are based on ICD-10–AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). See table 8A.2.3 for the ICD-10–AM codes used to classify potentially preventable conditions.
- (b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) from 2012–13 onward and the Australian Standard Geographical Classification (ASGC) prior to 2012–13, and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.
- (c) Data are from public and private hospitals in all jurisdictions.
- (d) Data exclude hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital', to adjust for separations recorded on both sides of contractual care arrangements.
- (e) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. As these data span two years, the population denominator used in calculating rates is a weighted sum of mid–year population estimates. For 2016–2018 this includes 50% of the population as at 30 June 2016, 100% of the population as at 30 June 2017 and 50% of the population at 30 June 2018. Numbers of hospitalisation used to calculate rates are total hospitalisations for two year periods. For 2016–2018, data include hospitalisations from 1 July 2016 to 30 June 2018.
- (f) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated).
- (g) Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus.

- (e) Data exclude hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital', to adjust for separations recorded on both sides of contractual care arrangements.
- (f) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. As these data span two years, the population denominator used in calculating rates is a weighted sum of mid-year population estimates. For 2016–2018 this includes 50% of the population as at 30 June 2016, 100% of the population as at 30 June 2017 and 50% of the population at 30 June 2018. Numbers of hospitalisation used to calculate rates are total hospitalisations for two year periods. For 2016–2018, data include hospitalisations from 1 July 2016 to 30 June 2018.
- (g) Non-Indigenous includes hospitalisations of non-Indigenous people, and for WA only, also those for whom Indigenous status was not stated.
- (h) Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus.

Table 8A.2.12 Hospitalisations for infections with a predominantly sexual mode of transmission, by Indigenous status, 2010–11 to 2018–19 (a), (b), (c), (d)

| | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (e)</i> | <i>Rate ratio (f)</i> |
|---|--|---------------------------|-----------------------|
| <i>Crude rate per 100 000 population</i> | | | |
| 2018–19 | 137 | 21 | na |
| 2017–18 | 125 | 20 | na |
| <i>Number of hospitalisations</i> | | | |
| 2018–19 | 1 153 | 5 170 | na |
| 2017–18 | 1 027 | 4 755 | na |
| <i>Age-standardised rate per 100 000 population (g)</i> | | | |
| 2018–19 | 138 | 21 | 6.6 |
| 2017–18 | 132 | 20 | 6.7 |
| 2016–17 | 132 | 20 | 6.7 |
| 2015–16 | 127 | 19 | 6.8 |
| 2014–15 | 131 | 19 | 7.0 |
| 2013–14 | 124 | 19 | 6.4 |
| 2012–13 | 134 | 21 | 6.6 |
| 2011–12 | 133 | 20 | 6.6 |
| 2010–11 | 116 | 20 | 5.8 |

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Data include hospitalisations with a diagnosis (principal or additional) ranged from A50 to A64.

(b) Data are from public and private hospitals in all jurisdictions.

(c) Data exclude hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital', to adjust for separations recorded on both sides of contractual care arrangements.

(d) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data.

(e) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated).

(f) Rate ratio is the age-standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the age-standardised non-Indigenous hospitalisation rate.

(g) Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus.

| Other sexually transmitted diseases (A57–A64) | 17 | 29 | 164 | 52 | 14 | 16 | 13 | 14 |
| Total (h) | 42 | 69 | 398 | 125 | 20 | 21 | 23 | 20 |

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Data include hospitalisations with a diagnosis (principal or additional) ranged from A50 to A64.

(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.

(c) Data are from public and private hospitals in all jurisdictions.

Table 8A.2.13 **Hospitalisations for infections with a predominantly sexual mode of transmission, by Indigenous status, by remoteness, 2010–2012 and 2016–2018 (a), (b), (c), (d), (e)**

| 2011–12 | 4 127 | 2 518 | 1.6 |
| 2010–11 | 3 988 | 2 461 | 1.6 |

(a) External causes (ICD-10-AM codes V00–Y98) are based on the first external cause reported where the principal diagnosis was 'injury, poisoning and certain other consequences of external causes' (ICD-10-AM codes S00–T98). Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Episodes of care for non-admitted patients treated in hospital in emergency department or outpatient clinics are not included in the hospitalisations count.

(b) Data are from public and private hospitals in all jurisdictions.

(c) Data exclude hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital', to adjust for separations recorded on both sides of contractual care arrangements.

(d) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. The population used is specific to the population age group being analysed.

(e) Includes separations where no external cause was reported.

(f) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated).

(g) Rate ratio is the age-standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the age-standardised non-Indigenous hospitalisation rate.

Table 8A.2.14 **Hospitalisations for external causes where the principal diagnosis was injury, poisoning and other consequences of external causes, by Indigenous status, 2010–11 to 2018–19 (a), (b), (c), (d), (e)**

(a) External causes (ICD-10-AM codes V00–Y98) are based on the first external cause reported where the principal diagnosis was 'injury, poisoning and certain other consequences of external causes' (ICD-10-AM codes S00–T98). Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Episodes of care for non-admitted patients treated in hospital in emergency department or outpatient clinics are not included in the hospitalisations count.

(b) Data are from public and private hospitals in all jurisdictions.

(c) Data exclude hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital', to adjust for separations recorded on both sides of contractual care arrangements.

Table 8A.2.15 Hospitalisations for external causes where the principal diagnosis was injury, poisoning and other consequences of external causes, by Indigenous status, by remoteness, 2010–2012 and 2016–2018 (a), (b), (c), (d), (e), (f)

|-----|--|-----------------------------------|---------------------------------|-----------------|--------------------|-----------------------------------|---------------------------------|-----------------|
| | Major cities | Inner and outer regional combined | Remote and very remote combined | Total Australia | Major cities | Inner and outer regional combined | Remote and very remote combined | Total Australia |
| (d) | Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) from 2012–13 onward and the Australian Standard Geographical Classification (ASGC) prior to 2012–13, and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area. | | | | | | | |
| (e) | Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. As these data span two years, the population denominator used in calculating rates is a weighted sum of mid-year population estimates. For 2016–2018 this includes 50% of the population as at 30 June 2016, 100% of the population as at 30 June 2017 and 50% of the population at 30 June 2018. Numbers of hospitalisation used to calculate rates are total hospitalisations for two year periods. For 2016–2018, data include hospitalisations from 1 July 2016 to 30 June 2018. | | | | | | | |
| (f) | Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus. | | | | | | | |
| (g) | 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated). | | | | | | | |
| (h) | This category includes: Accidental drowning and submersion (W65–W74); Other accidental threats to breathing (W75–W84); Overexertion, travel and privation (X50–X57); Accidental exposure to other and unspecified factors (X58–X59). | | | | | | | |
| (i) | This category includes: Healthcare associated Staphylococcus aureus bacteraemia (U90.0); Event of undetermined intent (Y10–Y34); Legal intervention and operations of war (Y35–Y36); Sequelae of external causes of morbidity and mortality (Y85–Y89); Supplementary factors related to causes of morbidity and mortality classified elsewhere (Y90–Y98). | | | | | | | |
| (j) | Includes separations where no external cause was reported. | | | | | | | |

Section 8.3

Table 8A.3.1 **Avoidable mortality (aged 0–74 years), by Indigenous status, by state and territory of usual residence, 2014–2018 (a), (b), (c), (d), (e), (f), (g), (h)**

| State/Territory | Number of deaths | | | Rate per 100 000 (i) | | Variability bands (+) | | Rate ratio (k) |
|---|---------------------------------------|----------------|--------------|---------------------------------------|--------------------|---------------------------------------|--------------------|----------------|
| | Aboriginal and Torres Strait Islander | Non-Indigenous | Not stated | Aboriginal and Torres Strait Islander | Non-Indigenous (j) | Aboriginal and Torres Strait Islander | Non-Indigenous (j) | |
| NSW | 1 855 | 40 761 | 444 | 215.8 | 101.0 | 23.4 | 2.2 | 2.1 |
| Qld (l) | 2 000 | 26 749 | 229 | 286.8 | 108.2 | 30.5 | 2.9 | 2.7 |
| WA | 1 436 | 12 401 | 369 | 443.4 | 98.7 | 56.5 | 3.9 | 4.5 |
| SA | 433 | 9 891 | 29 | 348.1 | 104.5 | 79.8 | 4.7 | 3.3 |
| NT | 1 348 | 1 021 | 5 | 548.2 | 129.1 | 72.4 | 18.3 | 4.2 |
| NSW, Qld, WA, SA, and the NT (m) | 7 072 | 90 823 | 1 076 | 312.3 | 103.3 | 17.6 | 1.6 | 3.0 |

- (a) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Aboriginal and Torres Strait Islander identification in mortality data for these periods. Data for these five jurisdictions over-represent Aboriginal and Torres Strait Islander populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions.
- (b) This table presents data for Potentially Avoidable Deaths as defined in the National Healthcare Agreement PI 16 for 2019 <<https://meteor.aihw.gov.au/content/index.phtml/itemId/698908>>. It includes deaths from conditions that are potentially preventable through individualised care and/or treatable through existing primary or hospital care. Due to changes in the specification of the indicator, data presented here are not comparable with that in previous reports. Deaths for ICD10 code C26.0 Intestinal tract, parts unspecified, have been included in the table. Avoidable mortality causes are listed in table 8A.3.6.
- (c) Data are grouped for 2014–2018 because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (d) Although most deaths of Aboriginal and Torres Strait Islander Australians are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these statistics are likely to underestimate the Aboriginal and Torres Strait Islander mortality rate. It is also difficult to exactly identify the difference between the Aboriginal and Torres Strait Islander and non-Indigenous mortality rates because of these data quality issues.
- (e) These data exclude 1,076 registered deaths where the Indigenous status was not stated for these causes of death, over the period 2014–2018.
- (f) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2014–2015 (final), 2016 (revised), 2017 and 2018 (preliminary). See Explanatory Notes 59–62 in Causes of Death, Australia, 2018 (cat. no. 3303.0) and Causes of Death Revisions, 2015 Final Data (Technical Note) and 2016 Revised Data (Technical Note) in Causes of Death, Australia, 2017 (cat. no. 3303.0).

Table 8A.3.1 **Avoidable mortality (aged 0–74 years), by Indigenous status, by state and territory of usual residence, 2014–2018 (a), (b), (c), (d), (e), (f), (g), (h)**

| State/Territory | Number of deaths | | | Rate per 100 000 (i) | | Variability bands (+) | | Rate ratio (k) |
|-----------------|---------------------------------------|----------------|------------|---------------------------------------|--------------------|---------------------------------------|--------------------|----------------|
| | Aboriginal and Torres Strait Islander | Non-Indigenous | Not stated | Aboriginal and Torres Strait Islander | Non-Indigenous (j) | Aboriginal and Torres Strait Islander | Non-Indigenous (j) | |

(g) Changes in coding processes have been applied to 2018 data. See Technical Note Updates to Iris coding software: Implementing WHO updates and improvements in coding processes, in the Causes of Death, Australia, 2018 (cat. no. 3303.0) publication.

(h) From the 2016 reference year, deaths with no age stated have not been pro-rated in the calculation of rates. Data grouped over several reference years which includes data for 2016 (i.e. the 2014–2018 data presented in this table), has also not been pro-rated.

(i) Directly age-standardised using the 2001 Australian standard population, by 5-year age group up to 74 years.

(j) Aboriginal and Torres Strait Islander and non-Indigenous population estimates are available for census years only. In the intervening years, Aboriginal and Torres Strait Islander population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Aboriginal and Torres Strait Islander population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2016 Census-based Aboriginal and Torres Strait Islander population projections from the 2016 Census-based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.

(k) Rate ratio is the mortality rate for Aboriginal and Torres Strait Islander Australians divided by the mortality rate for non-Indigenous Australians.

(l) From 2015, deaths data provided by the Queensland Registry of Births, Deaths and Marriages (RBDM) include information resulting in an increase in the number of deaths identified as Aboriginal and Torres Strait Islander in Queensland.

(m) Totals exclude those aged 75 years or over.

| 45–54 | 503.8 | 34.0 | 145.3 | 3.5 | 292.1 | 24.5 | 85.1 | 3.4 | 391.9 | 20.6 | 114.8 | 3.4 |
| 55–64 | 822.8 | 53.8 | 286.9 | 2.9 | 612.8 | 44.0 | 160.4 | 3.8 | 712.1 | 34.4 | 222.5 | 3.2 |
| 65–74 | 1 521.7 | 108.8 | 696.5 | 2.2 | 1 239.6 | 91.8 | 392.8 | 3.2 | 1 371.2 | 70.6 | 543.2 | 2.5 |
| Total (crude) (m) | 238.3 | 7.3 | 152.5 | 1.6 | 168.2 | 6.1 | 85.1 | 2.0 | 203.2 | 4.8 | 118.9 | 1.7 |
| Total (age-standardised) (m), (n) | 374.6 | 27.8 | 134.4 | 2.8 | 254.9 | 22.1 | 72.8 | 3.5 | 312.3 | 17.6 | 103.3 | 3.0 |

(a) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only, which are considered to have adequate levels of Indigenous identification in mortality data. Data for these jurisdictions over-represent Indigenous populations in less urbanised and more remote locations, and should not be assumed to represent the experience in the other jurisdictions. Care should be taken when interpreting mortality rates for Queensland due to recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. From 2015, deaths data provided by the Queensland Registry of Births, Deaths and Marriages (RBDM) include information resulting in an increase in the number of deaths identified as Aboriginal and Torres Strait Islander in Queensland.

TABLE 8A.3.2

Table 8A.3.2 **Avoidable mortality (aged 0–74 years), by Indigenous status, by sex, by age, NSW, Queensland, WA, SA and the NT, 2014–2018 (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k)**

| Age group (years) | Males | | | | Females | | | | Persons | | | |

| | Deaths per 100 000 | | | | Deaths per 100 000 | | | | Deaths per 100 000 | | | |
| | Aboriginal and Torres Strait Islander | Variability bands | Non-Indigenous | Rate ratio (I) | Aboriginal and Torres Strait Islander | Variability bands | Non-Indigenous | Rate ratio (I) | Aboriginal and Torres Strait Islander | Variability bands | Non-Indigenous | Rate ratio (I) |

- (b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2014-2015 (final), 2016 (revised), 2017 and 2018 (preliminary). See Explanatory Notes 59-62 in Causes of Death, Australia, 2018 (cat. no. 3303.0) and Causes of Death Revisions, 2015 Final Data (Technical Note) and 2016 Revised Data (Technical Note) in Causes of Death, Australia, 2017 (cat. no. 3303.0).
- (c) Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (d) This table presents data for Potentially Avoidable Deaths as defined in the National Healthcare Agreement PI 16 for 2019 <<https://meteor.aihw.gov.au/content/index.phtml/itemId/698908>>. It includes deaths from conditions that are potentially preventable through individualised care and/or treatable through existing primary or hospital care. Due to changes in the specification of the indicator, data presented here are not comparable with that in previous HPF reports. Deaths for ICD10 code C26.0 Intestinal tract, parts unspecified, have been included in the table. Avoidable mortality causes are listed in table 8A.3.6.
- (e) Although most deaths of Aboriginal and Torres Strait Islander Australians are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these statistics are likely to underestimate the Aboriginal and Torres Strait Islander mortality rate. It is also difficult to exactly identify the difference between the Aboriginal and Torres Strait Islander and non-Indigenous mortality rates because of these data quality issues.
- (f) These data exclude 1,076 registered deaths where the Indigenous status was not stated over the period 2014–2018.
- (g) Aboriginal and Torres Strait Islander and non-Indigenous population estimates are available for census years only. In the intervening years, Aboriginal and Torres Strait Islander population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Aboriginal and Torres Strait Islander population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2016 Census-based Aboriginal and Torres Strait Islander population projections from the 2016 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.

TABLE 8A.3.2

Table 8A.3.2 **Avoidable mortality (aged 0–74 years), by Indigenous status, by sex, by age, NSW, Queensland, WA, SA and the NT, 2014–2018 (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k)**

| Age group (years) | Males | | | | Females | | | | Persons | | | |
|-------------------|---|----------------------|--------------------|----------------------|---|----------------------|--------------------|----------------------|--|----------------------|--------------------|----------------------|
| | Deaths per 100 000 | | | | Deaths per 100 000 | | | | Deaths per 100 000 | | | |
| | Aboriginal and Torres Strait Islander | Variability bands | Non- Indigenous | Rate ratio (l) | Aboriginal and Torres Strait Islander | Variability bands | Non- Indigenous | Rate ratio (l) | Aboriginal and Torres Strait Islander | Variability bands | Non- Indigenous | Rate ratio (l) |

(h) Age-specific death rates for those aged under 1 are calculated per 100,000 live births for the mid-point year. Age-specific rates for those aged 1–4 are calculated per 100,000 estimated resident population, using the average estimated resident population for 2014–2018, for those age groups. Age-specific rates for all other age groups are calculated per 100,000 estimated resident population for the mid-point year, for selected age group.

(i) The avoidable mortality classification includes Acute lymphoid leukaemia/Acute lymphoblastic leukaemia for those aged 0–44 years only. This cause has been included in only the relevant age groups and the subset included in the total.

(j) Changes in coding processes have been applied to 2018 data. See Technical Note Updates to Iris coding software: Implementing WHO updates and improvements in coding processes, in the Causes of Death, Australia, 2018 (cat. no. 3303.0) publication.

(k) From the 2016 reference year, deaths with no age stated have not been pro-rated in the calculation of rates. Data grouped over several reference years which includes data for 2016 (i.e. the 2014–2018 data presented in this table), has also not been pro-rated.

(l) Rate ratio is the mortality rate for Aboriginal and Torres Strait Islander Australians divided by the mortality rate for non-Indigenous Australians.

(m) Totals exclude those aged 75 years or over.

(n) Total rate is directly age-standardised death rates per 100,000, using the 2001 Australian Estimated Resident population, by 5-year age group up to 74 years.

TABLE 8A.3.3

Table 8A.3.3 **Avoidable mortality (aged 0–74 years), by Indigenous status, NSW, Queensland, WA, SA and the NT, by cause of death, 2004–2008 and 2014–2018 (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k)**

| Cause of death | Number of deaths | | | Per cent | | | Deaths per 100 000 (l) | | | Variability band | |
|----------------|--|------------|------------|---------------------------------------|------------|------------|---------------------------------------|------------|---------------------------------------|------------------|-----------|
| | Aboriginal and Torres Strait Islander | Non-Indig. | Not stated | Aboriginal and Torres Strait Islander | Non-Indig. | Not stated | Aboriginal and Torres Strait Islander | Non-Indig. | Aboriginal and Torres Strait Islander | Non-Indig | Ratio (m) |
| | | | | | | | | | | | |
| (a) | This table presents data for Potentially Avoidable Deaths as defined in the National Healthcare Agreement PI 16 for 2019 < https://meteor.aihw.gov.au/content/index.phtml/itemId/698908 >. It includes deaths from conditions that are potentially preventable through individualised care and/or treatable through existing primary or hospital care. Due to changes in specifications, data presented in this table are not comparable with the data in previous reports. Deaths for ICD10 code C26.0 Intestinal tract, parts unspecified, have been included in the table. Avoidable mortality causes are listed in table 8A.3.6. | | | | | | | | | | |
| (b) | Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Aboriginal and Torres Strait Islander identification in mortality data for these periods. Data for these five jurisdictions over-represent Indigenous populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions. | | | | | | | | | | |
| (c) | Data are reported for 2014-2018 because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period. | | | | | | | | | | |
| (d) | Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and non-Indigenous mortality rates because of these data quality issues. | | | | | | | | | | |
| (e) | These data exclude 1,076 registered deaths where the Indigenous status was not stated for these causes of death, over the period 2014–2018. | | | | | | | | | | |
| (f) | All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2009-2015 (final), 2016 (revised), 2017 and 2018 (preliminary). See Explanatory Notes 59-62 in Causes of Death, Australia, 2018 (cat. no. 3303.0) and Causes of Death Revisions, 2015 Final Data (Technical Note) and 2016 Revised Data (Technical Note) in Causes of Death, Australia, 2017 (cat. no. 3303.0). | | | | | | | | | | |
| (g) | Aboriginal and Torres Strait Islander and non-Indigenous population estimates are available for census years only. In the intervening years, Aboriginal and Torres Strait Islander population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Aboriginal and Torres Strait Islander population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2016 Census-based Aboriginal and Torres Strait Islander population projections from the 2016 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases. | | | | | | | | | | |
| (h) | From 2015, deaths data provided by the Queensland Registry of Births, Deaths and Marriages (RBDM) include information resulting in an increase in the number of deaths identified as Aboriginal and Torres Strait Islander in Queensland. | | | | | | | | | | |

TABLE 8A.3.3

Table 8A.3.3 **Avoidable mortality (aged 0–74 years), by Indigenous status, NSW, Queensland, WA, SA and the NT, by cause of death, 2004–2008 and 2014–2018 (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k)**

| Cause of death | Number of deaths | | | Per cent | | | Deaths per 100 000 (l) | | Variability band | | Ratio (m) |
|----------------|---------------------------------------|------------|------------|---------------------------------------|------------|------------|---------------------------------------|------------|---------------------------------------|------------|-----------|
| | Aboriginal and Torres Strait Islander | Non-Indig. | Not stated | Aboriginal and Torres Strait Islander | Non-Indig. | Not stated | Aboriginal and Torres Strait Islander | Non-Indig. | Aboriginal and Torres Strait Islander | Non-Indig. | |

(i) From the 2016 reference year, deaths with no age stated have not been pro-rated in the calculation of rates. Data grouped over several reference years which includes data for 2016 (i.e. the 2014–2018 data presented in this table), has also not been pro-rated.

(j) Categories are based on the ICD-10 10th Revision (World Health Organization).

(k) Changes in coding processes have been applied to 2018 data. See Technical Note Updates to Iris coding software: Implementing WHO updates and improvements in coding processes, in the Causes of Death, Australia, 2018 (cat. no. 3303.0) publication.

(l) Directly age-standardised death rates per 100,000, using the 2001 Australian standard population, by 5-year age group up to 74. Rates for cervical cancer (C53) and breast cancer (C50) have been calculated using the female population as the denominator.

(m) Rate ratio is the mortality rate for Aboriginal and Torres Strait Islander Australians divided by the mortality rate for non-Indigenous Australians.

(n) Total of cancers included in the National Healthcare Agreement PI16 for 2019: C18–C21, C26.0, C43, C44, C50 (females only), C53, C61, C64, C73, C81 and C91.0 (age 0–44 only).

(o) Breast cancer in females only.

(p) Selected invasive infections consists of ICD-10 codes A38–A41, A46, A48.1, G00, G03, J02.0, J13–J16, J18, L03.

(q) Other includes all avoidable mortality not specifically detailed in the table.

(r) Total includes all avoidable mortality, as defined in the National Healthcare Agreement PI 16 for 2019 <<https://meteor.aihw.gov.au/content/index.phtml/itemId/698908>>

(s) The avoidable mortality classification includes Acute lymphoid leukaemia/Acut lymphoblastic leukaemia (C91.0) for those aged 0–44 only. This cause has been included in only the relevant age groups and the subset included in the total.

| % change (q), (r) | -41.1 | -39.1 | -40.1 | .. | -46.1 | -42.9 | -44.9 | .. | .. | .. | .. | -38.0 | -37.5 | -37.4 |

(a) This table presents data for Potentially Avoidable Deaths as defined in the National Healthcare Agreement PI 16 for 2019 <<https://meteor.aihw.gov.au/content/index.phtml/itemId/698908>>. It includes deaths from conditions that are potentially preventable through individualised care and/or treatable through existing primary or hospital care. Due to changes in the specification of the indicator, data presented here are not comparable with that in previous reports. Deaths for ICD10 code C26.0 Intestinal tract, parts unspecified, have been included in the table. Avoidable mortality causes are listed in table 8A.3.6.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2006-2015 (final), 2016 (revised), 2017 and 2018 (preliminary). See Explanatory Notes 59-62 in Causes of Death, Australia, 2018 (cat. no. 3303.0) and Causes of Death Revisions, 2015 Final Data (Technical Note) and 2016 Revised Data (Technical Note) in Causes of Death, Australia, 2017 (cat. no. 3303.0).

(c) Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and other mortality rates because of these data quality issues.

(d) These data exclude 7,750 registered deaths where the Indigenous status was not stated over the period 1998–2018.

(e) Data are reported for NSW, Queensland, WA, SA and the NT only. These five jurisdictions are considered to have adequate levels of Aboriginal and Torres Strait Islander identification in mortality data. Data for these jurisdictions over-represent Indigenous populations in less urbanised and more remote locations, and should not be assumed to represent the experience in the other jurisdictions. They do not represent an Australian total.

TABLE 8A.3.4

Table 8A.3.4 **Avoidable mortality (aged 0–74 years), by Indigenous status, by sex, NSW, Queensland, WA, SA, and the NT, 1998 to 2018 (age-standardised) (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k), (l)**

| <i>Aboriginal and Torres Strait Islander rate (per 100 000) (m)</i> | | | | <i>Non-Indigenous rate (per 100 000) (m)</i> | | | | <i>Rate ratio (n)</i> | | | | <i>Rate difference (o)</i> | | | |
|--|----------------|----------------|--|--|----------------|----------------|--|-----------------------|----------------|----------------|--|----------------------------|----------------|----------------|--|
| | | | | | | | | | | | | | | | |
| <i>Males</i> | <i>Females</i> | <i>Persons</i> | <i>Person variability band</i> | <i>Males</i> | <i>Females</i> | <i>Persons</i> | <i>Person variability band</i> | <i>Males</i> | <i>Females</i> | <i>Persons</i> | | <i>Males</i> | <i>Females</i> | <i>Persons</i> | |
| (f) Aboriginal and Torres Strait Islander and non-Indigenous population estimates are available for census years only. In the intervening years, Aboriginal and Torres Strait Islander population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Aboriginal and Torres Strait Islander population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2016 Census-based Aboriginal and Torres Strait Islander population projections from the 2016 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases. | | | | | | | | | | | | | | | |
| (g) Care should be taken when interpreting mortality rates for Queensland due to recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. | | | | | | | | | | | | | | | |
| (h) From 2015, deaths data provided by the Queensland Registry of Births, Deaths and Marriages (RBDM) include information resulting in an increase in the number of deaths identified as Aboriginal and Torres Strait Islander in Queensland. | | | | | | | | | | | | | | | |
| (i) WA Indigenous deaths for 2007, 2008 and 2009 corrected for over-reporting. | | | | | | | | | | | | | | | |
| (j) Changes in coding processes have been applied to 2018 data. See Technical Note Updates to Iris coding software: Implementing WHO updates and improvements in coding processes, in the Causes of Death, Australia, 2018 (cat. no. 3303.0) publication. | | | | | | | | | | | | | | | |
| (k) From the 2013 reference year, the ABS implemented a new automated coding system called Iris. The 2013–2018 data coded in the Iris system applied an updated version of the ICD-10 (2013 version for 2013 data, 2015 version for 2014–2017 data and 2016 version for 2018 data) when coding multiple causes of death, and when selecting the underlying cause of death. For details of further impacts of this change from 2013 data onwards, please see the ABS Implementation of the Iris Software: Understanding Coding and Process Improvements Technical Note, in the Causes of Death, Australia, 2013 (cat. no. 3303.0) publication. Prior to the 2013 reference year, the 2006 version of the ICD-10 was the most recent version used for coding deaths. See Explanatory Notes 29–33 in Causes of Death, Australia, 2017 (Cat. no. 3303.0). | | | | | | | | | | | | | | | |
| (l) From the 2016 reference year, deaths with no age stated have not been pro-rated in the calculation of death rates. Prior to 2016, deaths with no age stated have been pro-rated in the calculation of death rates. | | | | | | | | | | | | | | | |
| (m) Directly age-standardised using the 2001 Australian standard population, by 5-year age group up to 74 years. | | | | | | | | | | | | | | | |

TABLE 8A.3.4

Table 8A.3.4 **Avoidable mortality (aged 0–74 years), by Indigenous status, by sex, NSW, Queensland, WA, SA, and the NT, 1998 to 2018 (age-standardised) (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k), (l)**

| <i>Aboriginal and Torres Strait Islander rate (per 100 000) (m)</i> | | | | <i>Non-Indigenous rate (per 100 000) (m)</i> | | | | <i>Rate ratio (n)</i> | | | <i>Rate difference (o)</i> | | |
|---|----------------|----------------|--|--|----------------|----------------|--|-----------------------|----------------|----------------|----------------------------|----------------|----------------|
| <i>Males</i> | <i>Females</i> | <i>Persons</i> | <i>Person variability band</i> | <i>Males</i> | <i>Females</i> | <i>Persons</i> | <i>Person variability band</i> | <i>Males</i> | <i>Females</i> | <i>Persons</i> | <i>Males</i> | <i>Females</i> | <i>Persons</i> |

(n) Rate ratio is the rate for Aboriginal and Torres Strait Islander people divided by the rate for non-Indigenous people.

(o) Rate difference is the rate for Aboriginal and Torres Strait Islander people minus the rate for non-Indigenous people.

(p) Average annual change in rates, rate ratios, and rate differences determined using linear regression analysis.

(q) Represents results with statistically significant increases or declines at the $p < 0.05$ level over the selected periods.

(r) Per cent change between 1998 and 2014 based on the average annual change over the period.

TABLE 8A.3.5

Table 8A.3.5 **Avoidable and unavoidable mortality (aged 0–74 years), by Indigenous status, NSW, Qld, WA, SA and NT, 2014–18 (a), (b), (c), (d), (e), (f), (g), (h), (i)**

| | Number | | | Per cent | | | Rate per 100 000 (j), (k) | | | |
|---------------------------|---------------------------------------|----------------|--------------|---------------------------------------|----------------|--------------|---------------------------------------|----------------|----------------|---------------------|
| | Aboriginal and Torres Strait Islander | Non-Indigenous | Not stated | Aboriginal and Torres Strait Islander | Non-Indigenous | Not stated | Aboriginal and Torres Strait Islander | Non-Indigenous | Rate ratio (l) | Rate difference (m) |
| Avoidable mortality | 7 072 | 90 823 | 1 076 | 60.5 | 49.9 | 61.3 | 312.3 | 103.3 | 3.0 | 209.0 |
| Unavoidable mortality (n) | 4 622 | 91 040 | 680 | 39.5 | 50.1 | 38.7 | 218.8 | 99.4 | 2.2 | 119.3 |
| Total mortality (o) | 11 694 | 181 863 | 1 756 | 100.0 | 100.0 | 100.0 | 531.1 | 202.8 | 2.6 | 328.3 |

- (a) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2014-2015 (final), 2016 (revised), 2017 and 2018 (preliminary). See Explanatory Notes 59-62 in Causes of Death, Australia, 2018 (cat. no. 3303.0) and Causes of Death Revisions, 2015 Final Data (Technical Note) and 2016 Revised Data (Technical Note) in Causes of Death, Australia, 2017 (cat. no. 3303.0).
- (b) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only, which are considered to have adequate levels of Indigenous identification in mortality data. Data for these jurisdictions over-represent Indigenous populations in less urbanised and more remote locations, and should not be assumed to represent the experience in the other jurisdictions.
- (c) This table presents data for Avoidable mortality as defined in the National Healthcare Agreement 2019 PI-16 <<https://meteor.aihw.gov.au/content/index.phtml/itemId/698908>>. Deaths for ICD10 code C26.0 Intestinal tract, parts unspecified, have been included in the table.
- (d) Data are presented for 2014-2018 because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (e) Although most deaths of Aboriginal and Torres Strait Islander Australians are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these statistics are likely to underestimate the Aboriginal and Torres Strait Islander mortality rate. It is also difficult to exactly identify the difference between the Aboriginal and Torres Strait Islander and non-Indigenous mortality rates because of these data quality issues.
- (f) These data exclude 1,076 registered deaths where the Indigenous status was not stated for these causes of death, over the period 2014–2018.
- (g) From 2015, deaths data provided by the Queensland Registry of Births, Deaths and Marriages (RBDM) include information resulting in an increase in the number of deaths identified as Aboriginal and Torres Strait Islander in Queensland.

TABLE 8A.3.5

Table 8A.3.5 **Avoidable and unavoidable mortality (aged 0–74 years), by Indigenous status, NSW, Qld, WA, SA and NT, 2014–18 (a), (b), (c), (d), (e), (f), (g), (h), (i)**

| Number | | | Per cent | | | Rate per 100 000 (j), (k) | | | |
|--|--------------------|---------------|--|--------------------|---------------|--|--------------------|-------------------|------------------------|
| Aboriginal and Torres Strait Islander | Non- Indigenous | Not stated | Aboriginal and Torres Strait Islander | Non- Indigenous | Not stated | Aboriginal and Torres Strait Islander | Non- Indigenous | Rate ratio (l) | Rate difference (m) |

(h) Changes in coding processes have been applied to 2018 data. See Technical Note Updates to Iris coding software: Implementing WHO updates and improvements in coding processes, in the Causes of Death, Australia, 2018 (cat. no. 3303.0) publication.

(i) From the 2016 reference year, deaths with no age stated have not been pro-rated in the calculation of rates. Data grouped over several reference years which includes data for 2016 (i.e. the 2014–2018 data presented in this table), has also not been pro-rated.

(j) Population data between Census years are based on assumptions about past and future levels of fertility, mortality and migration, and have a degree of uncertainty.

(k) Directly age-standardised using the 2001 Australian standard population, by 5-year age group up to 74.

(l) Rate ratio is the mortality rate for Indigenous Australians divided by the mortality rate for non-Indigenous Australians.

(m) Rate difference is the mortality rate for Indigenous Australians minus the mortality rate for non-Indigenous Australians.

(n) Unavoidable mortality is all causes other than those specified as Avoidable Mortality.

(o) Totals exclude those aged 75 years or over.

| Other conditions | | |
| Complications of pregnancy, labour or the puerperium | O00–O99 | |
| Selected external causes of morbidity and mortality | | |
| Falls | W00–W19 | |
| Fires, burns | X00–X09 | |

Table 8A.3.6 **ICD-10 codes for potentially avoidable deaths, by major cause of death group, 2019 (a)**

| <i>Cause of death group</i> | <i>ICD-10 codes</i> | <i>Limits (age, sex)</i> |
|--|---------------------|--------------------------|
| Suicide and self-inflicted injuries | X60–X84, Y87.0 | |
| Misadventures to patients during surgical and medical care | Y60–Y69 | |
| Medical devices associated with adverse incidents in diagnostic and therapeutic use | Y70–Y82 | |
| Surgical and other medical procedures as the cause of abnormal reaction of the patient, or of later complication, without mention of misadventure at the time of the procedure | Y83, Y84 | |
| Other external causes of morbidity and mortality | | |
| Transport accidents | V01–V99 | |
| Exposure to inanimate mechanical forces | W20–W49 | |
| Exposure to animate mechanical forces | W50–W64 | |
| Accidental drowning and submersion | W65–W74 | |
| Other accidental threats to breathing | W75–W84 | |
| Exposure to electric current, radiation and extreme ambient air temperature and pressure | W85–W99 | |
| Contact with heat and hot substances | X10–X19 | |
| Contact with venomous animals and plants | X20–X29 | |
| Exposure to forces of nature | X30–X39 | |
| Accidental poisoning by and exposure to noxious substances | X40–X49 | |
| Overexertion, travel and privation | X50–X57 | |
| Accidental exposure to other and unspecified factors | X58, X59 | |
| Assault | X85–Y09 | |
| Event of undetermined intent | Y10–Y34 | |
| Legal interventions and operations of war | Y35, Y36 | |
| Drugs, medicaments and biological substances causing adverse effects in therapeutic use | Y40–Y59 | |
| Sequelae of external causes of morbidity and mortality | Y85, Y86, Y87.1–Y89 | |

ICD-10 = International Statistical Classification of Diseases and Related Health Problems, 10th Revision. **HIV/AIDS** = Human Immunodeficiency Virus/Acquired Immune Deficiency Syndrome. **COPD** = Chronic Obstructive Pulmonary Disease.

(a) Avoidable causes of death are categorised into either a treatable or preventable category. Potentially preventable deaths are those amenable to screening and primary prevention such as immunisation. Potentially treatable deaths are those amenable to therapeutic interventions.

(a) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Estimates of proportions with a 95 per cent confidence interval that is plus or minus 10 percentage points or above (or whose interval includes 0 per cent or 100 per cent) should be used with caution.

(d) Data for Aboriginal and Torres Strait Islander persons aged 15 years or over are available in the following publication: National Aboriginal and Torres Strait Islander Health Survey, 2018-19, ABS Cat. no. 4715.0.

(e) Data from 2014-15 are rounded to the nearest hundred.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(c) Data are rounded to the nearest hundred.

| Very remote | % | 28.6 | .. | 12.3 | 10.2 | 85.3 | .. | .. | 11.0 | 8.3 |

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate.

Table 8A.4.7 **Current daily smokers, Aboriginal and Torres Strait Islander people (aged 18 years or over), by state and territory, by remoteness, 2001 (a), (b)**

| <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(c) The sample size in the NT was considered too small to produce reliable estimates for the NT in the ABS 2004-05 National Health Survey, but NT records in the survey have been attributed appropriately to national estimates.

(d) Rate ratio is the age-standardised Aboriginal and Torres Strait Islander proportion divided by the age-standardised non-Indigenous proportion.

(e) Rate difference is the age-standardised Aboriginal and Torres Strait Islander proportion less the age-standardised non-Indigenous proportion.

(a) Rates are age-standardised to the 2001 population.

Table 8A.4.9 **Current daily smokers (aged 18 years or over), by Indigenous status, by state and territory, by remoteness, 2017–19 (age-standardised) (a), (b), (c), (d), (e), (f), (g)**

| <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) Estimates of proportions with a 95 per cent confidence interval that is plus or minus 10 percentage points or above (or whose interval includes 0 per cent or 100 per cent) should be used with caution.

(e) Data for Aboriginal and Torres Strait Islander people are from the NATSIHS. The 2018-19 NATSIHS sample frame excluded households from Remote areas in Victoria, Very remote areas in Tasmania, and Inner regional areas in the ACT.

(f) Data for non-Indigenous people are from the NHS and SIH pooled data set (NHIH), sourced through published comparator data in the NATSIHS. Non-Indigenous data for Outer regional and Remote areas by state and territory has been combined as data quality is not sufficient to support separate reporting of these remoteness categories. The NHIH scope exclude households from Very remote areas.

(g) For the 2017-18 NHIH and 2018-19 NATSIHS, the 95 per cent confidence intervals and RSEs for the aged standardised rates are those for the associated crude rates.

(h) Rate ratio is the age-standardised Indigenous proportion divided by the age-standardised non-Indigenous proportion.

(i) Rate difference is the age-standardised Indigenous proportion less the age-standardised non-Indigenous proportion.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

Table 8A.4.10 **Current daily smokers (aged 18 years or over), by Indigenous status, by state and territory, by remoteness, 2014-15 (age-standardised) (a), (b)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(c) Rate ratio is the age-standardised Aboriginal and Torres Strait Islander proportion divided by the age-standardised non-Indigenous proportion.

(d) Rate difference is the age-standardised Aboriginal and Torres Strait Islander proportion less the age-standardised non-Indigenous proportion.

Table 8A.4.13 Current daily smokers (aged 18 years or over), by Indigenous status, by sex, by remoteness, 1995, 2001, 2004-05, 2008, 2011-13, 2014-15 and 2017-19 (age-standardised) (a), (b)

| | Proportion (%) | | | Relative standard error (%) | | | 95 per cent confidence interval (±) | | |
|-----|--|----------------|--------------|-----------------------------|----------------|--------------|-------------------------------------|----------------|--------------|
| | <i>Males</i> | <i>Females</i> | <i>Total</i> | <i>Males</i> | <i>Females</i> | <i>Total</i> | <i>Males</i> | <i>Females</i> | <i>Total</i> |
| (a) | Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. | | | | | | | | |
| (b) | This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview. | | | | | | | | |
| (c) | Age-standardised Aboriginal and Torres Strait Islander data for very remote areas are not available as there are no comparable non-Indigenous data from the 2001, 2004-05 and 2007-08 National Health Surveys. | | | | | | | | |
| (d) | Data from the 1995 National Health Survey are for non-remote areas only. | | | | | | | | |

na Not available. .. Not applicable.

Note: 2018-19 NATSIHS data have been sourced by the Productivity Commission from the Expanded Confidentialised Unit Record File (CURF), DataLab.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

| Rate difference (j) | no. | 13.6 | 11.4 | 11.7 | 12.3 | 7.8 | 11.7 | 10.9 | - 1.2 | 10.5 |

(a) Rates are age-standardised to the 2001 population.

(b) BMI is a simple index of weight-for-height that is commonly used to classify underweight, normal weight, overweight and obesity. It is calculated from height and weight information, using the formula weight (kg) divided by the square of height (m). For adults, obesity is defined as a BMI of greater than or equal to 30 or overweight is defined as a BMI of 25.0–29.9.

(c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) Data for Aboriginal and Torres Strait Islander people are from the NATSIHS.

(e) Data for non-Indigenous people are from the NHS, sourced through published comparator data in the NATSIHS.

(f) Voluntary measurements of height and weight were collected from respondents. For respondents with missing height and weight values, their record received a donor record response from a similar respondent.

Table 8A.5.2 **Overweight or obese people (aged 18 years or over), by Indigenous status, by state and territory, 2017–19 (age-standardised) (measured BMI) (a), (b), (c), (d), (e), (f), (g), (h)**

|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(g) Estimates of proportions with a 95 per cent confidence interval that is plus or minus 10 percentage points or above (or whose interval includes 0 per cent or 100 per cent) should be used with caution.

(h) For the 2017-18 NHS and 2018-19 NATSIHS, the 95 per cent confidence intervals and RSEs for the aged standardised rates are those for the associated crude rates.

(i) Rate ratio is the proportion of rate of Indigenous people overweight or obese divided by the rate of non-Indigenous overweight or obese.

(j) Rate difference is the rate of Indigenous people overweight or obese less the rate of non-Indigenous overweight or obese.

(a) Rates are age-standardised to the 2001 population.

(b) BMI is a simple index of weight-for-height that is commonly used to classify underweight, normal weight, overweight and obesity. It is calculated from height and weight information, using the formula weight (kg) divided by the square of height (m). For adults, obesity is defined as a BMI of greater than or equal to 30 or overweight is defined as a BMI of 25.0–29.9.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Data for Aboriginal and Torres Strait Islander people are from the NATSIHS. The 2018-19 NATSIHS sample frame excluded households from Remote areas in Victoria, Very remote areas in Tasmania, and Inner regional areas in the ACT.

(d) Data for non-Indigenous people are from the NHS, sourced through published comparator data in the NATSIHS. Non-Indigenous data for Outer regional and Remote areas by state and territory has been combined as data quality is not sufficient to support separate reporting of these remoteness categories. The NHS scope exclude households from Very remote areas.

(e) Voluntary measurements of height and weight were collected from respondents. For respondents with missing height and weight values, their record received a donor record response from a similar respondent.

(f) Estimates of proportions with a 95 per cent confidence interval that is plus or minus 10 percentage points or above (or whose interval includes 0 per cent or 100 per cent) should be used with caution.

Table 8A.5.5 **Overweight or obese people (aged 18 years or over), by Indigenous status, by state and territory by remoteness, 2017–19 (age-standardised) (measured BMI) (a), (b), (c), (d), (e), (f), (g)**

(a) Rates are age-standardised to the 2001 population.

(b) BMI is a simple index of weight-for-height that is commonly used to classify underweight, normal weight, overweight and obesity. It is calculated from height and weight information, using the formula weight (kg) divided by the square of height (m).

(c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) Data for Aboriginal and Torres Strait Islander people are from the NATSIHS.

(e) Data for non-Indigenous people are from the NHS, sourced through published comparator data in the NATSIHS.

(f) Voluntary measurements of height and weight were collected from respondents. For respondents with missing height and weight values, their record received a donor record response from a similar respondent.

(g) Estimates of proportions with a 95 per cent confidence interval that is plus or minus 10 percentage points or above (or whose interval includes 0 per cent or 100 per cent) should be used with caution.

(h) For the 2017-18 NHS and 2018-19 NATSIHS, the 95 per cent confidence intervals and RSEs for the aged standardised rates are those for the associated crude rates.

– Nil or rounded to zero.

(a) Percentage rates are age-standardised to the 2001 population.

(b) Population excludes persons for whom BMI could not be calculated.

(c) Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution.

(d) 2004-05 data are based on self-reported BMI and are not comparable to 2012-13 data which are based on measured BMI.

(e) Data for Aboriginal and Torres Strait Islander people are from the National Aboriginal and Torres Strait Islander Health Survey.

(f) Data for non-Indigenous people are from the National Health Survey.

(a) Population excludes persons for whom BMI could not be calculated.

(b) 2012-13 data are based on measured BMI and are not comparable to 2004-05 data which are based on self-reported BMI.

(c) Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution.

(a) Body Mass Index (BMI) is a simple index of weight-for-height that is commonly used to classify underweight, normal weight, overweight and obesity. It is calculated from height and weight information, using the formula weight (kg) divided by the square of height (m). For adults, obesity is defined as a BMI of greater than or equal to 30 or overweight is defined as a BMI of 25.0–29.9.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Voluntary measurements of height and weight were collected from respondents. For records with missing height and weight values received a donor record response from a similar respondent. Comparisons with earlier years should only be made for proportions (which are directly comparable) and not numbers of people, as imputation on physical measurement data was not done for earlier surveys.

Table 8A.5.15 Overweight or obese Aboriginal and Torres Strait Islander people (aged 18 years or over), by state and territory (crude rates), 2004-05 (self-reported BMI), 2012-13 and 2018-19 (measured BMI) (a), (b), (c), (d), (e)

(a) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) Includes children who reported that they did not eat vegetables.

(c) Based on the 2013 NHMRC Guidelines that recommend a minimum number of serves of fruit and vegetables each day to ensure good nutrition.

(d) Includes children who reported that they did not eat fruit.

(e) Proportions with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution.

| Loss of one or more teeth (c) | 3.8 | 3.8 | 3.6 | 3.1 | 1.8 |
| No tooth loss | 1.5 | 6.2 | 11.0 | 16.4 | 1.7 |
| Total | — | — | — | — | — |

(a) Self-reported data consisting of persons reporting whether they have lost any of their adult teeth (excluding wisdom teeth) and if so, how many.

(b) Complete tooth loss is comprised of persons who responded they have lost all of their adult teeth.

(c) Doesn't include 'complete tooth loss'

(d) Proportions with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

— Nil or rounded to zero.

| No | 10.1 | 2.8 | 2.3 | — | 0.8 | 0.7 |
| Ratio yes/no | .. | .. | .. | .. | .. | .. |
| Total number of persons aged 15 years or | 7.4 | 2.4 | 2.2 | .. | 0.4 | — |

(a) Self-reported data consisting of persons reporting they have lost all of their adult teeth. This excludes wisdom teeth.

(b) Percentages add within rows

(c) Distribution of total Indigenous population. Percentages add within columns.

(d) Includes never attended school.

(e) Includes persons who smoke daily, persons who smoke at least once a week but not daily, and those who smoke less than weekly.

(f) Includes ex-smokers and those who have never smoked.

(g) Self reported data consisting of persons reporting they have a current heart or circulatory condition which has lasted, or is likely to last, for 6 months or more.

(h) Self-reported data consisting of persons reporting a current medical condition which has lasted, or is expected to last, for six months or more.

(i) Includes Type 1 and Type 2 diabetes, and type unknown. Includes persons who reported they had diabetes but that it was not current at the time of interview.

(j) Proportions with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

.. Not applicable. **np** Not published – Nil or rounded to zero.

| 2011-12 | 326.0 | 268.7 | 1.2 |
| 2010-11 | 307.6 | 267.9 | 1.1 |

(a) Principal diagnosis for ICD-10-AM codes K02, K03, K04, K05, K06, K08, K09.8, K09.9, K12 and K13. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases 10th Edition, Australian Modification).

(b) Data are from public and private hospitals in all jurisdictions.

(c) From 2012-13, data exclude inter-hospital contracted patients to private sector hospitals in WA.

(d) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data.

(e) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as Non-indigenous or not stated).

(f) Rate ratio is the age-standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the non-Indigenous hospitalisation rate.

(g) Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus.

.. Not applicable.

Table 8A.6.16 **Potentially preventable hospitalisations for dental conditions, by Indigenous status, by remoteness, 2010–2012 and 2016–2018 (a), (b), (c), (d), (e)**

| | <i>Crude rate per 100 000 population</i> | | <i>Age-standardised rate per 100 000 population (f)</i> | |
|--------------------------|--|---------------------------|---|---------------------------|
| | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (g)</i> | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (g)</i> |
| 2016–2018 | | | | |
| Major cities | 341.1 | 261.1 | 301.1 | 264.3 |
| Inner and outer regional | 421.4 | 308.8 | 349.5 | 314.5 |
| Remote and very remote | 628.0 | 305.6 | 516.3 | 319.8 |
| 2010–2012 | | | | |
| Major cities | 244.1 | 241.5 | 204.7 | 247.9 |
| Inner and outer regional | 411.3 | 314.5 | 311.3 | 326.1 |
| Remote and very remote | 728.1 | 283.0 | 575.9 | 287.3 |

(a) Principal diagnosis for ICD-10-AM codes K02, K03, K04, K05, K06, K08, K09.8, K09.9, K12 and K13. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases 10th Edition, Australian Modification).

(b) Data are from public and private hospitals in all jurisdictions.

(c) From 2012-13, data exclude inter-hospital contracted patients to private sector hospitals in WA.

(d) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(e) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data.

(f) Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus.

(g) Non-Indigenous includes hospitalisations identified as not Indigenous and for WA only also those with a 'not stated' Indigenous status.

| Total 0–14 years | 1.0 | 1.1 | 1.0 | 1.0 | 1.0 | 1.1 | 1.0 | 1.0 | 1.1 |

(a) Hospitalisations are for dental procedures (extraction, restoration, pulpal, other) under general anaesthetic based on Australian Classification of Health Interventions classification. For a list of procedure codes used see table 8A.6.16. While it is possible for multiple procedures to occur within a single separation, for this table each separation has been counted only once.

(b) Data are from public and private hospitals in all jurisdictions.

(c) From 2012-13, data exclude inter-hospital contracted patients to private sector hospitals in WA.

(d) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. The population used is specific to the population age group being analysed (children aged 0–4 years, 5–9 years, 10–14 years and 0-14 years).

(e) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as Non-indigenous or not stated).

(a) Hospitalisations are for dental procedures (extraction, restoration, pulpal, other) under general anaesthetic based on Australian Classification of Health Interventions classification. For a list of procedure codes used see table 8A.6.16. While it is possible for multiple procedures to occur within a single separation, for this table each separation has been counted only once.

(b) Data exclude private hospitals from the NT.

(c) From 2012-13, data exclude inter-hospital contracted patients to private sector hospitals in WA.

(d) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. The population used is specific to the population age group being analysed (children aged 0–4 years, 5–9 years, 10–14 years and 0–14 years).

Table 8A.6.18 Dental hospitalisations for children (aged 0–14 years), by Indigenous status, by age, NSW, Victoria, Queensland, WA, SA and public hospitals in the NT, 2004-05 to 2018-19 (a), (b), (c), (d)

|--|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
|--|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|

(e) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as Non-indigenous or not stated).

(f) The rate ratio is the Aboriginal and Torres Strait Islander rate divided by rate for Other people.

(a) Hospitalisations are for dental procedures (extraction, restoration, pulpal, other) under general anaesthetic based on Australian Classification of Health Interventions classification. For a list of procedure codes used see table 8A.6.16. While it is possible for multiple procedures to occur within a single hospitalisation, for this table each hospitalisation has been counted only once.

(b) Data are from public and private hospitals in all jurisdictions.

(c) From 2012–13, data exclude inter-hospital contracted patients to private sector hospitals in WA.

Table 8A.6.19 Hospital dental procedure rates for children (aged 0–14 years), by Indigenous status, by remoteness, 2010–2012 and 2016–2018 (a), (b), (c), (d), (e)

| | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (f)</i> | <i>Rate ratio (g)</i> |
|-----|---|---------------------------|-----------------------|
| (d) | Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area. | | |
| (e) | Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. The population used is specific to the population age group being analysed (children aged 0–4 years, 5–9 years, 10–14 years and 0–14 years). | | |
| (f) | 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as Non-indigenous or not stated). | | |
| (g) | The rate ratio is the Aboriginal and Torres Strait Islander rate divided by rate for non-Indigenous people. | | |

(a) Proportions have been age-standardised to the 2001 Australian Estimated Resident Population.

(b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Comprises remote and very remote areas. National Health Surveys, from which data are reported for the non-Indigenous population exclude very remote areas.

(d) Represents a K5 score of 5–11.

(e) Represents a K5 score of 12–25.

(f) Includes refusals and people with no K5 score.

– Nil or rounded to zero.

| Australia | 71.3 | 1.5 | 2.0 | 0.8 | 27.2 | 3.8 | 2.0 | 2.0 |

- (a) Levels of psychological distress are derived from the Kessler Psychological Distress Scale (K-5).
- (b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (c) Represents a K5 score of 5–11.
- (d) Represents a K5 score of 12–25.
- (e) The rate ratio is calculated by dividing the age-standardised rate for Aboriginal and Torres Strait Islander people by the corresponding age-standardised rate for non-Indigenous people. The rate ratios are not based on the rates included in the table.
- (f) Totals for Aboriginal and Torres Strait Islander Australians exclude a small number of people for whom responses were provided by proxy but who were not present at interview.

| Low/Moderate distress level (b) | 66.2 | 1.7 | 2.2 | 82.5 | 0.5 | 0.8 |
| High/Very high distress level (c) | 30.8 | 4.0 | 2.4 | 13.2 | 2.3 | 0.6 |
| Total persons (d), (e) | 100.0 | – | – | 100.0 | – | – |

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) Represents a K5 score of 5–11.

(c) Represents a K5 score of 12–25.

(d) Includes refusals and people with no K5 score.

(e) Includes persons who were not present for the interview.

– Nil or rounded to zero.

(a) Relates to feelings in the four week period prior to interview.

TABLE 8A.7.11

Table 8A.7.11 Selected indicators of positive well being, Aboriginal and Torres Strait Islander people (aged 18 years or over), by sex, 2008, 2012-13, 2014-15 and 2018-19 (a), (b)

| <i>Unit</i> | <i>Males</i> | | | | <i>Females</i> | | | | <i>Persons</i> | | | |
|-------------|--------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| | <i>2008</i> | <i>2012-13</i> | <i>2014-15</i> | <i>2018-19</i> | <i>2008</i> | <i>2012-13</i> | <i>2014-15</i> | <i>2018-19</i> | <i>2008</i> | <i>2012-13</i> | <i>2014-15</i> | <i>2018-19</i> |

(b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Includes 'not known' responses and refusals.

(d) Total for 2012-13 AATSIHS excludes a small number of persons for whom responses were provided by proxy but who were not present at interview.

– Nil or rounded to zero.

Note: 2018-19 NATSIHS data have been sourced by the Productivity Commission from TableBuilder.

(a) Relates to feelings in the four week period prior to interview.

(b) Proportions with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Regional comprises inner and outer regional areas.

|--|--|--------------------|------------------------------------|--|--------------------|------------------------------------|--|--------------------|------------------------------------|--|--------------------|------------------------------------|
| | 2018-19 (d) | | | 2014-15 | | | 2012-13 | | | 2008 | | |
| 6-10 stressors experienced | na | na | na | 13.0 | 8.1 | 2.0 | 8.1 | 8.2 | 1.3 | 10.9 | 7.5 | 1.6 |
| 11 or more stressors experienced | na | na | na | 2.8 | 13.9 | 0.8 | 2.3 | 14.7 | 0.7 | 3.2 | 13.8 | 0.9 |
| Total number of persons experiencing low/moderate | na | na | na | 265 781 | 1.6 | 8 332 | 252 296 | 1.5 | 7 356 | 194 115 | 1.6 | 6 153 |

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) Stressors are those reported by the respondent as having being experienced by themselves, their family or friends.

(c) Total proportions may not add due to multiple category responses.

(d) This question is no longer asked in the National Aboriginal and Torres Strait Islander Healthy Survey

(e) The total includes those where it was not known or refused to answer the stressors experienced questions.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) Stressors are those reported by the respondent as having being experienced by themselves, their family or friends.

(c) Represents a K5 score of 12–25.

(d) Total proportions may not add due to multiple category responses.

(e) This question is no longer asked in the National Aboriginal and Torres Strait Islander Healthy Survey

– Nil or rounded to zero. **na** Not available.

(a) Relates to feelings in the four week period prior to interview.

Table 8A.7.22 **Selected indicators of psychological distress of people (aged 18 years or over), by Indigenous status, by age, 2014-15 (a), (b)**

| 18–24 years | | | 25–34 years | | | 35–44 years | | | 45–54 years | | | 55+ years | | |
|--------------|------------|---------------|--------------|------------|---------------|--------------|------------|---------------|--------------|------------|---------------|--------------|------------|---------------|
| <i>Prop.</i> | <i>RSE</i> | <i>95 per</i> | <i>Prop.</i> | <i>RSE</i> | <i>95 per</i> | <i>Prop.</i> | <i>RSE</i> | <i>95 per</i> | <i>Prop.</i> | <i>RSE</i> | <i>95 per</i> | <i>Prop.</i> | <i>RSE</i> | <i>95 per</i> |
| (%) | (%) | cent CIs | (%) | (%) | cent CIs | (%) | (%) | cent CIs | (%) | (%) | cent CIs | (%) | (%) | cent CIs |
| | | (±) | | | (±) | | | (±) | | | (±) | | | (±) |

(b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is reported against each estimate. Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Total excludes a small number of persons for whom responses were provided by proxy but who were not present at interview.

(d) Includes 'not known' responses and refusals.

– Nil or rounded to zero.

(a) The ICD-10-AM codes are for principal diagnosis only. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Includes all mental and behavioural disorders (ICD-10-AM codes F00–F99).

(b) Data are reported by State or Territory of usual residence of the patient hospitalised.

(c) Data exclude private hospitals from the NT.

(d) From 2012-13, data exclude inter-hospital contracted patients to private sector hospitals in WA.

(e) The volume of separations in NSW may not be directly comparable to other jurisdictions due to variations in admission practices for patients treated in the Emergency Department.

(f) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated).

(g) Directly age-standardised using the Australian 2001 standard population (up to 65+ for Tasmania and the ACT, up to 75+ for other jurisdictions).

(a) The ICD-10-AM codes are for principal diagnosis only. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Includes all mental and behavioural disorders (ICD-10-AM codes F00–F99).

(b) Data exclude private hospitals from the NT.

(c) From 2012-13, data exclude inter-hospital contracted patients to private sector hospitals in WA.

(d) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data.

(e) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as Non-indigenous or not stated).

Table 8A.7.25 **Hospitalisations for mental and behavioural disorders, by Indigenous status, NSW, Vic, Qld, WA, SA and public hospitals in the NT, by sex, 2004-05 to 2018-19 (a), (b), (c), (d)**

TABLE 8A.7.26

Table 8A.7.26 Hospitalisations for mental and behavioural disorders, by Indigenous status, by remoteness, 2010–2012 and 2016–2018 (a), (b), (c), (d), (e)

| | <i>Major cities</i> | <i>Inner and outer regional combined</i> | <i>Remote and very remote combined</i> | <i>Total</i> |
|----------------|---------------------|--|--|--------------|
| | Rate ratio (h) | | | |
| Rate ratio (h) | 1.8 | 1.8 | 3.0 | 1.8 |

(a) The ICD-10-AM codes are for principal diagnosis only. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Includes all mental and behavioural disorders (ICD-10-AM codes F00–F99).

(b) Data are from public and private hospitals in all jurisdictions.

(c) From 2012-13, data exclude inter-hospital contracted patients to private sector hospitals in WA.

(d) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of the hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(e) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data.

(f) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated).

(g) Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0-4 years in five yearly groups up to 70-74 years old and 75 years plus.

(h) Rate ratio is the age-standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the state and territory governments' specialised public mental health services' measure for the current reporting period.

Table 8A.7.28 People receiving clinical mental health services, by Indigenous status, by service type, 2008-09 to 2017-18 (age-standardised) (a)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> | <i>Unit</i> | <i>Aust</i> |
|---|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|-------------|-------------|
| Data are comparable (subject to caveats) across jurisdictions reported for MBS subsidised mental health services. | | | | | | | | | | | | |
| Data are complete (subject to caveats) for the current reporting period. | | | | | | | | | | | | |
| (a) Rates are age-standardised to the Australian population as at 30 June 2001. | | | | | | | | | | | | |
| (b) Excludes people for whom Indigenous status was missing or not reported. The Indigenous status rates should be interpreted with caution due to the varying and, in some instances, unknown quality of Indigenous identification across jurisdictions. All historical data has been recalculated using the revised Indigenous population data. | | | | | | | | | | | | |
| (c) Caution should be taken when making inter-jurisdictional comparisons for public data. South Australia submitted data that were not based on unique patient identifier or data matching approaches. This was also the case for data submitted by Tasmania prior to 2012-13. Victorian 2011-12 and 2012-13 data are unavailable due to service level collection gaps resulting from protected industrial action during this period. Industrial action during 2011-12 and 2012-13 in Tasmania has limited the available data quality and quantity of the community mental health care data; which represents a large proportion of the overall figures. Australian totals only include available data and should therefore be interpreted with caution. Australian totals for 2011-12 and 2012-13 should not be compared to previous, or more recent years. | | | | | | | | | | | | |
| (d) DVA data not available by Indigenous status. Medicare data presented by Indigenous status have been adjusted for under-identification in the Department of Human Services (DHS) Voluntary Indigenous Identifier (VII) database. Indigenous rates are therefore modelled and should be interpreted with caution. These statistics are not derived from the total Australian Indigenous population, but from those Aboriginal and Torres Strait Islander people who have voluntarily identified as Indigenous to DHS. The statistics have been adjusted to reflect demographic characteristics of the overall Indigenous population, but this adjustment may not address all the differences in the service use patterns of the enrolled population relative to the total Indigenous population. The level of VII enrolment (61 per cent nationally as at August 2012) varies across age-sex-remoteness-State/Territory sub-groups and over time which means that the extent of adjustment required varies across jurisdictions and over time. Indigenous rates should also be interpreted with caution due to small population numbers in some jurisdictions. MBS data for 2011-12 has been updated since the 2014 report. | | | | | | | | | | | | |

| Non-Indigenous (d) | 136 786 | 96.5 | 95.7 |
| Total | 144 006 | 100.0 | 100.0 |

(a) Classified according ICD-10-AM International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification; National Non-admitted Patient Emergency Department Care Database. Includes emergency department occasions of service that had a principal diagnosis based on ICD-10-AM codes F00-F99 or the equivalent ICD-9-CM codes.

(b) Caution is required when conducting time series analyses. The data source for this collection changed in 2014-15 from data provided by state and territory health authorities (2004-05 to 2013-14) to the National Non-admitted Patient Emergency Department Care Database. Additionally, changes in the volume of patients over time for NSW may be attributed, in part, to the increased number of hospitals included in the data for this jurisdiction.

(c) The number of occasions of service may not sum to the total due to missing and/or not reported data.

(d) Includes non-Indigenous patients and patients for whom Indigenous status was 'not stated'.

| WA | | | | 2.2 | 1.7 | 1.9 |
| SA | | | | np | np | 1.5 |
| NT | | | | 3.8 | 3.3 | 3.6 |
| NSW, Qld, WA, SA, and the NT (j) | | | | 1.6 | 1.2 | 1.4 |

(a) Mental and behavioural disorders include ICD-10 codes F00-F99.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).

(c) Age-standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all people in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 people. SDRs in this table have been calculated using the indirect method, age-standardised by 5 year age group to 75 years or over. Rates calculated using the direct method.

(d) Data are presented in five-year groupings due to the volatility of small numbers each year.

(e) Data based on reference year.

(f) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

(g) Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Aboriginal and Torres Strait Islander across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.

Table 8A.7.30 Mental and behavioural disorders death rates, by Indigenous status, by sex, by state and territory, 2014–2018 (per 100 000 population) (a), (b), (c), (d), (e), (f)

TABLE 8A.7.31

Table 8A.7.31 **Mental and behavioural disorders death rates, by Indigenous status, by age, 2014–2018 (a), (b), (c), (d), (e)**

| | Unit | Aboriginal and Torres Strait Islander (f) | | | | | Non-Indigenous | | | | |
|---|------|---|-------|-------|------------|-------------------|----------------|-------|-------|------------|-------------------|
| | | Under 25 | 25–34 | 35–44 | 45 or over | All ages (g), (h) | Under 25 | 25–34 | 35–44 | 45 or over | All ages (g), (h) |
| Number of deaths | | | | | | | | | | | |
| NSW, Qld, WA, SA, and the NT (i), (j) | no. | 3 | 5 | 21 | 429 | 456 | 18 | 32 | 105 | 34 371 | 34 526 |
| Rate | | | | | | | | | | | |
| NSW, Qld, WA, SA, and the NT (i), (j), (k), (l) | '000 | np | 1.0 | 5.4 | 58.5 | 12.9 | 0.1 | 0.3 | 1.0 | 103.2 | 42.1 |
| Variability bands | ± | np | 0.9 | 2.3 | 5.5 | 1.2 | 0.0 | 0.1 | 0.2 | 1.1 | 0.4 |

(a) Mental and behavioural disorders include ICD-10 codes F00-F99.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2010–12 (final), 2013 (revised) and 2014 (preliminary). For further information see Explanatory Notes 52-54 and Technical Note, Causes of Death Revisions, 2012 and 2013 in Causes of Death, Australia, 2014 (cat. no. 3303.0).

(c) Data are presented in five-year groupings due to the volatility of small numbers each year.

(d) Data based on reference year.

(e) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

(f) Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Aboriginal and Torres Strait Islander across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Aboriginal and Torres Strait Islander and non-Indigenous data.

(g) Includes age not stated.

(h) Data cells with small values have been randomly assigned to protect the confidentiality of individuals. As a result, some totals will not equal the sum of their components. It is important to note that cells with a zero value have not been affected by confidentialisation.

(i) Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.

(j) Data include NSW, Queensland, WA, SA and the NT only. These 5 states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.

Table 8A.7.31 **Mental and behavioural disorders death rates, by Indigenous status, by age, 2014–2018 (a), (b), (c), (d), (e)**

| | Aboriginal and Torres Strait Islander (f) | | | | | Non-Indigenous | | | | |
|------|---|-------|-------|------------|-------------------|----------------|-------|-------|------------|-------------------|
| Unit | Under 25 | 25–34 | 35–44 | 45 or over | All ages (g), (h) | Under 25 | 25–34 | 35–44 | 45 or over | All ages (g), (h) |

(k) Crude age specific rates calculated per 100 000 Estimated Resident Population for each age group for the midpoint year. Crude rates cannot be compared across across years. Crude rates cannot be compared to age-standardised rates.

(l) Denominators used in the calculation of rates for the Indigenous population are Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.

| 1998 | no. | 104 | 21.2 | 1 870 | 14.5 | 1.5 | 6.7 |

Table 8A.8.1 **Age-standardised mortality rates, rate ratios and rate differences, intentional self harm, by Indigenous status, by sex, NSW, Qld, WA, SA and NT, 1998–2018 (a), (b), (c), (d), (e), (f), (g), (h), (i), (j)**

| Unit | Aboriginal and Torres Strait Islander | | Non-Indigenous | | Rate ratio (l) | Rate difference (m) |
|------|--|------------------------|----------------|------------------------|----------------|---------------------|
| | Number | Rate (per 100 000) (k) | Number | Rate (per 100 000) (k) | | |
| (a) | Categories are based on the ICD-10 10th Revision (World Health Organization): Intentional self harm ICD-10 codes X60–X84, Y87.0. From the 2013 reference year, the ABS implemented a new automated coding system called Iris. The 2013–2018 data coded in the Iris system applied an updated version of the ICD-10 (2013 version for 2013 data, 2015 version for 2014–2017 data and 2016 version for 2018 data) when coding multiple causes of death, and when selecting the underlying cause of death. For details of further impacts of this change from 2013 data onwards, please see the ABS Implementation of the Iris Software: Understanding Coding and Process Improvements Technical Note, in the <i>Causes of Death, Australia, 2013</i> (Cat. no. 3303.0) publication. Prior to the 2013 reference year, the 2006 version of the ICD-10 was the most recent version used for coding deaths. See Explanatory Notes 29–33 in <i>Causes of Death, Australia, 2017</i> (Cat. no. 3303.0). | | | | | |
| (b) | All causes of death data from 2006 onward are subject to a revisions process. Once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2006-2015 (final), 2016 (revised), 2017 and 2018 (preliminary). See Explanatory Notes 59-62 in <i>Causes of Death, Australia, 2018</i> (Cat. no. 3303.0) and <i>Causes of Death Revisions, 2015 Final Data</i> (Technical Note) and <i>2016 Revised Data</i> (Technical Note) in <i>Causes of Death, Australia, 2017</i> (Cat. no. 3303.0). | | | | | |
| (c) | Care needs to be taken in interpreting figures relating to suicide. See Explanatory Notes 91-100 in <i>Causes of Death, Australia, 2018</i> (cat. No. 3303.0). | | | | | |
| (d) | Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only, which are considered to have adequate levels of Indigenous identification in mortality data. Data for these jurisdictions over-represent Indigenous populations in less urbanised and more remote locations, and should not be assumed to represent the experience in the other jurisdictions. | | | | | |
| (e) | Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and other mortality rates because of these data quality issues. | | | | | |
| (f) | These data exclude 939 registered deaths where the Indigenous status was not stated over the period 1998–2018. | | | | | |
| (g) | Aboriginal and Torres Strait Islander data for Western Australia were not published in <i>Causes of Death, Australia, 2010</i> (Cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. These data were released on 22 June, 2012 in <i>Causes of Death, Australia, 2010</i> (Cat. no. 3303.0) and are included in this table. | | | | | |
| (h) | From 2015, deaths data provided by the Queensland Registry of Births, Deaths and Marriages (RBDM) include information resulting in an increase in the number of deaths identified as Aboriginal and Torres Strait Islander in Queensland. | | | | | |
| (i) | Deaths prior to 2007 are by year of registration and state/territory of usual residence. Deaths from 2007 onwards are by reference year and state/territory of usual residence. Registration year prior to 2007 is equivalent to reference year from 2007 onwards. | | | | | |

TABLE 8A.8.1

Table 8A.8.1 **Age-standardised mortality rates, rate ratios and rate differences, intentional self harm, by Indigenous status, by sex, NSW, Qld, WA, SA and NT, 1998–2018 (a), (b), (c), (d), (e), (f), (g), (h), (i), (j)**

| | Aboriginal and Torres Strait Islander | | Non-Indigenous | | Rate ratio (l) | Rate difference (m) |
|------|---|------------------------|----------------|------------------------|----------------|---------------------|
| Unit | Number | Rate (per 100 000) (k) | Number | Rate (per 100 000) (k) | | |
| (j) | Coronial cases are more likely to be affected by a lag in registration time, especially those which are due to external causes, including suicide, homicide and drug-related deaths. Due to small numbers these lagged coroner-referred registrations can create large yearly variation in some causes of deaths of Aboriginal and Torres Strait Islander persons. Caution should be taken when making year to year analysis. | | | | | |
| (k) | Directly age-standardised using the 2001 Australian standard population, by 5-year age group up to 75+. | | | | | |
| (l) | Rate ratio is the age-standardised rate for Indigenous Australians divided by the age-standardised rate for non-Indigenous Australians. | | | | | |
| (m) | Rate difference is the mortality rate for Indigenous Australians minus the mortality rate for non-Indigenous Australians. | | | | | |
| (n) | Changes in coding processes have been applied to 2018 data. See Technical Note Updates to Iris coding software: Implementing WHO updates and improvements in coding processes, in the Causes of Death, Australia, 2018 (Cat. no. 3303.0) publication | | | | | |
| (o) | Care should be taken when interpreting mortality rates for Queensland due to changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. | | | | | |

Source: AIHW and ABS unpublished analysis of National Mortality Database.

TABLE 8A.8.2

Table 8A.8.2 Deaths from intentional self-harm, by state and territory (NSW, Queensland, WA, SA, NT), by Indigenous status, by sex, 2014–2018 (a), (b), (c), (d), (e)

| | Unit | NSW | Qld | WA | SA | NT | Total |
|---------------------------------------|------|-------|-------|-------|-------|------|--------|
| Number | | | | | | | |
| Aboriginal and Torres Strait Islander | | | | | | | |
| Males | no. | 151 | 200 | 142 | 19 | 74 | 586 |
| Females | no. | 42 | 59 | 56 | 18 | 35 | 210 |
| Persons | no. | 193 | 259 | 198 | 37 | 109 | 796 |
| Non-Indigenous | | | | | | | |
| Males | no. | 3 047 | 2 618 | 1 212 | 813 | 106 | 7 796 |
| Females | no. | 962 | 792 | 427 | 282 | 34 | 2 497 |
| Persons | no. | 4 009 | 3 410 | 1 639 | 1 095 | 140 | 10 293 |
| Age-standardised rate per 100 000 (f) | | | | | | | |
| Aboriginal and Torres Strait Islander | | | | | | | |
| Males | '000 | 28.5 | 38.8 | 54.8 | 22.4 | 35.8 | 38.1 |
| Females | '000 | 6.6 | 9.7 | 20.9 | 20.1 | 16.4 | 10.3 |
| Persons | '000 | 17.1 | 24.0 | 37.9 | 21.2 | 26.2 | 24.1 |
| Non-Indigenous | | | | | | | |
| Males | '000 | 16.2 | 22.9 | 19.5 | 19.4 | 23.4 | 19.2 |
| Females | '000 | 5.0 | 6.7 | 6.8 | 6.6 | 8.3 | 5.7 |
| Persons | '000 | 10.5 | 14.6 | 13.1 | 12.9 | 1.6 | 12.4 |

- (a) All causes of death data from 2006 onward are subject to a revisions process — once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2014 and 2015 (final), 2016 (revised), 2017 and 2018 (preliminary). See Explanatory Notes 59-62 in *ABS Causes of Death, Australia, 2017*, Cat. no. 3303.0.
- (b) Cells with small values have been randomly assigned to protect the confidentiality of individuals. As a result, some totals will not equal the sum of their components. Cells with a zero value have not been affected by confidentialisation.
- (c) Intentional self-harm includes ICD-10 codes X60-X84 and Y87.0.
- (d) Data are presented in five-year groupings due to the volatility of small numbers each year.
- (e) Data based on reference year.
- (f) The age-standardised rates presented in this table have been calculated using Aboriginal and Torres Strait Islander population estimates and projections based on the 2016 Census. As a result, these rates may differ from those previously published.

| NSW, Qld, WA, SA, NT (i) | ± | 1.8 | 6.0 | 6.2 | 2.8 | 0.3 | 0.7 | 0.8 | 0.4 |

Table 8A.8.3 Deaths from intentional self-harm, by state and territory (NSW, Queensland, WA, SA, NT), by Indigenous status, by age, 2014–2018 (a), (b), (c), (d), (e), (f), (g)

| Unit | Aboriginal and Torres Strait Islander (h) | | | | Non-Indigenous (h) | | | |
|------|--|-------|-------|------------|--------------------|-------|-------|------------|
| | Under 25 | 25–34 | 35–44 | 45 or over | Under 25 | 25–34 | 35–44 | 45 or over |
| (a) | All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2014-2015 (final), 2016 (revised), 2017 and 2018 (preliminary). See Explanatory Notes 59-62 in Causes of Death, Australia, 2018 (Cat. no. 3303.0) and Causes of Death Revisions, 2015 Final Data (Technical Note) and 2016 Revised Data (Technical Note) in Causes of Death, Australia, 2017 (Cat. no. 3303.0). | | | | | | | |
| (b) | Data are presented in five-year groupings due to the volatility of small numbers each year. | | | | | | | |
| (c) | Intentional self-harm includes ICD-10 codes X60-X84 and Y87.0. | | | | | | | |
| (d) | Data based on reference year. | | | | | | | |
| (e) | Data cells with small values have been randomly assigned to protect the confidentiality of individuals. As a result, some totals will not equal the sum of their components. Cells with a zero value have not been affected by confidentialisation. | | | | | | | |
| (f) | Deaths where the Indigenous status of the deceased was not stated are excluded from analysis. | | | | | | | |
| (g) | Excludes age not stated. | | | | | | | |
| (h) | Data on deaths of Aboriginal and Torres Strait Islander people are affected by differing levels of coverage of deaths identified as Aboriginal and Torres Strait Islander people across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Aboriginal and Torres Strait Islander and non-Indigenous data. | | | | | | | |
| (i) | Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These 5 states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis. Total includes data for NSW, Queensland, WA, SA and the NT only. | | | | | | | |
| (j) | Crude age specific rates calculated per 100 000 estimated resident population for each age group for the mid-point year. Crude rates cannot be compared across across years. Crude rates cannot be compared to age-standardised rates. | | | | | | | |
| (k) | Denominators used in the calculation of rates for the Aboriginal and Torres Strait Islander population are <i>Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2006 to 2031</i> (ABS Cat. no. 3238.0, series B, 2016 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Aboriginal and Torres Strait Islander population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated. | | | | | | | |

- (a) Deaths from intentional self-harm, include deaths related to ICD-10 codes X60–X84 and Y87.0. Care needs to be taken in interpreting these data. See ABS Causes of Death, 2018 (Cat. no. 3303.0) Explanatory Notes 91-100.
- (b) Explanatory Notes 59-62 in *Causes of Death, Australia, 2018* (Cat. no. 3303.0) and *Causes of Death Revisions, 2015 Final Data* (Technical Note) and 2016 Revised Data (Technical Note) in *Causes of Death, Australia, 2017* (Cat. no. 3303.0).
- (c) Greater capital cities and remainders of state/territory are Statistical Area Level 4s (SA4s) grouped in accordance with the classification from ASGS: Volume 1 – Main structure and greater capital city statistical areas, July 2016 (Cat. no. 1270.0.55.001). In previous Causes of Death publications, this table has been based on the July 2011 version of the ASGS. The figures presented in this table have been re-calculated based on the July 2016 version of the ASGS. This may result in small changes when comparing the data in this table with that of previous years.

TABLE 8A.8.4

Table 8A.8.4 Deaths from intentional self-harm, by Indigenous status, by area, 2014–2018 (a), (b), (c), (d), (e), (f)

| | NSW | Vic (g) | Qld | WA | SA | Tas | ACT | NT | Aust (h) |
|-----|--|---------|-----|----|----|-----|-----|----|----------|
| (d) | Although most deaths of Aboriginal and Torres Strait Islander people are registered, it is likely that some are not accurately identified as Aboriginal and Torres Strait Islander. Therefore, these data are likely to underestimate the Aboriginal and Torres Strait Islander all causes mortality rate. See Explanatory notes 63-75 in <i>Causes of Death, Australia, 2018</i> (Cat. no. 3303.0) for further information on specific issues relating to Indigenous data. | | | | | | | | |
| (e) | Cells with small values have been randomly assigned to protect the confidentiality of individuals. As a result, some totals will not equal the sum of their components. Cells with a zero value have not been affected by confidentialisation. | | | | | | | | |
| (f) | Deaths where the Indigenous status of the deceased was not stated are excluded from analysis. | | | | | | | | |
| (g) | Care needs to be taken when interpreting data derived from Victorian coroner-referred deaths including suicide. See Explanatory Note 111 in <i>Causes of Death, Australia, 2018</i> (Cat. no. 3303.0). | | | | | | | | |
| (h) | Total data are reported by jurisdiction of usual residence for NSW, Qld, WA, SA and the NT only. Only these five states and territories have evidence of a sufficient level of Aboriginal and Torres Strait Islander identification and numbers of deaths to support mortality analysis. See Explanatory Notes 63-75 in <i>Causes of Death, Australia, 2018</i> (Cat. no. 3303.0) for further information on interpreting data relating to deaths of Aboriginal and Torres Strait Islander persons. | | | | | | | | |
| (i) | Denominators used in the calculation of rates for the Aboriginal and Torres Strait Islander population are <i>Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2006 to 2031</i> (ABS Cat. no. 3238.0, series B, 2016 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Aboriginal and Torres Strait Islander population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated. | | | | | | | | |

(a) Data are from public and private hospitals in all jurisdictions.

(b) Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with a principal diagnosis of injury and poisoning (ICD-10-AM codes S00-T75, T79) and a first reported external cause reported for ICD-10AM codes 'X60–X84', based on the International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification.

(c) Data exclude hospitalisations for which mode of admission reported as admitted patient transferred from another hospital.

(d) Data exclude hospitalisations with reported ICD-10-AM code Z50 (Care involving the use of rehabilitation procedures) as an additional diagnosis.

(e) Data exclude hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital', to adjust for separations recorded on both sides of contractual care arrangements.

(f) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. The population denominator used in calculating rates is a weighted sum of June 30 population estimates. This includes 50 per cent of the population as at 30 June at the beginning of the reference year and 50 per cent of the population at 30 June at the end of the reference year. For 2018–19 this includes 50 per cent of the population as at 30 June 2018 and 50 per cent of the population at 30 June 2019.

(g) Persons includes sex not stated and intersex/indeterminate.

(h) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated).

Table 8A.8.5 Hospitalisations for non-fatal intentional self-harm, by Indigenous status, by sex, 2010-11 to 2018-19 (a), (b), (c), (d), (e), (f)

| Persons (h) | 1.5 | 1.8 | 1.8 | 1.8 | 1.9 | 1.9 | 2.1 | 2.3 | 2.5 | 2.6 | 2.5 | 2.7 | 2.8 | 3.0 | 3.2 |

- (a) This table includes data for residents of six jurisdictions only (NSW, Victoria, Queensland, WA, SA and the NT).
- (b) Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with a principal diagnosis of injury and poisoning (ICD-10-AM codes S00-T75,T79) and a first reported external cause reported for ICD-10AM codes 'X60–X84', based on the International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification.
- (c) Data exclude separations for which mode of admission reported as admitted patient transferred from another hospital.
- (d) Data exclude separations with reported ICD-10-AM code Z50 (Care involving the use of rehabilitation procedures) as an additional diagnosis.
- (e) Data exclude private hospitals in the NT.
- (f) Data for hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital' are counted once, to adjust for separations recorded on both sides of contractual care arrangements.
- (g) Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. The population denominator used in calculating rates is a weighted sum of June 30 population estimates. This includes 50 per cent of the population as at 30 June at the beginning of the reference year and 50 per cent of the population at 30 June at the end of the reference year. For 2018-19 this includes 50 per cent of the population as at 30 June 2018 and 50 per cent of the population at 30 June 2019.
- (h) Persons data includes sex not stated and intersex/indeterminate.
- (i) 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated).
- (j) Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus.
- (k) Rate ratio is the age-standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the non-Indigenous hospitalisation rate.

TABLE 8A.8.6

Table 8A.8.6 **Hospitalisations for non-fatal intentional self-harm, by Indigenous status, by sex, NSW, Vic, Queensland, WA, SA and NT, 2004-05 to 2018-19 (a), (b), (c), (d), (e), (f), (g)**

| | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (j)</i> | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (j)</i> | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (j)</i> | <i>Rate ratio (k)</i> |
| 2016–2018 | | | | | | | |
| Major cities | 2 223 | 37 582 | 363.5 | 108.3 | 371.3 | 110.0 | 3.4 |
| Inner and outer regional | 2 229 | 16 580 | 310.8 | 136.3 | 321.5 | 154.2 | 2.1 |
| Remote and very remote | 963 | 778 | 321.0 | 113.4 | 327.2 | 131.5 | 2.5 |
| Total (l) | 5 517 | 56 010 | 338.7 | 117.8 | 348.8 | 122.7 | 2.8 |
| 2010–2012 | | | | | | | |
| Major cities | 1 169 | 32 972 | 215.0 | 106.4 | 234.6 | 105.7 | 2.2 |
| Inner and outer regional | 1 257 | 14 192 | 199.1 | 123.0 | 216.3 | 134.2 | 1.6 |
| Remote and very remote | 884 | 710 | 333.5 | 93.7 | 321.5 | 97.5 | 3.3 |
| Total (l) | 3 343 | 48 545 | 232.1 | 112.2 | 245.4 | 113.9 | 2.2 |

(a) Data are from public and private hospitals in all jurisdictions.

(b) Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with a principal diagnosis of injury and poisoning (ICD-10-AM codes S00-T75,T79) and a first reported external cause reported for ICD-10AM codes 'X60–X84', based on the International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification.

(c) Data exclude separations for which mode of admission reported as admitted patient transferred from another hospital.

(d) Data exclude separations with reported ICD-10-AM code Z50 (Care involving the use of rehabilitation procedures) as an additional diagnosis.

(e) Data exclude hospitalisations in WA with a contracted patient status of 'Inter-hospital contracted patient to private sector hospital', to adjust for separations recorded on both sides of contractual care arrangements.

(f) Numbers of hospitalisation are total hospitalisations for two year periods. For 2016–2018, data include hospitalisations from 1 July 2016 to 30 June 2018. For 2010–2012, data include hospitalisations from 1 July 2010 to 30 June 2012.

TABLE 8A.8.7

Table 8A.8.7 **Hospitalisations for non-fatal intentional self-harm, by Indigenous status, by remoteness of residence, 2010–2012 and 2016–2018 (a), (b), (c), (d), (e), (f), (g)**

| | <i>Number</i> | | <i>Crude rate per 100 000 population (h)</i> | | <i>Age-standardised rate per 100 000 population (i)</i> | | |
|-----|--|---------------------------|--|---------------------------|---|---------------------------|-----------------------|
| | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (j)</i> | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (j)</i> | <i>Aboriginal and Torres Strait Islander</i> | <i>Non-Indigenous (j)</i> | <i>Rate ratio (k)</i> |
| (g) | Disaggregation by remoteness area is based on the 2006 (2010-12) and 2011 and 2016 (2016-18) Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area. | | | | | | |
| (h) | Rates per 100 000 population are calculated using population estimates and projections based on 2016 Census data. As these data span two years, the population denominator used in calculating rates is a weighted sum of June 30 population estimates. For 2016–2018 this includes 50 per cent of the population as at 30 June 2016, 100 per cent of the population as at 30 June 2017 and 50 per cent of the population at 30 June 2018. | | | | | | |
| (i) | Rates are directly age-standardised using the Australian 2001 standard population. Age groups used for age standardisation are from 0–4 years in five yearly groups up to 70–74 years old and 75 years plus. | | | | | | |
| (j) | 'Non-Indigenous' only includes hospitalisations of people explicitly identified as non-Indigenous, except for WA where it includes all hospitalisations not explicitly recorded as Indigenous (WA hospitalisations data does not separately identify records as non-Indigenous or not stated). | | | | | | |
| (k) | Rate ratio is the age-standardised Aboriginal and Torres Strait Islander hospitalisation rate divided by the non-Indigenous hospitalisation rate. | | | | | | |
| (l) | Total includes migratory areas and separations with unknown remoteness area. | | | | | | |

9 Economic participation

Strategic areas for action

Economic participation can affect people's wellbeing in many ways. The indicators in this strategic area for action focus on the key factors that contribute to positive economic outcomes, as well as measures of the outcomes themselves.

- Employment by full time/part time status, sector and occupation (section 9.1) — having a job can lead to improved incomes for families and communities, and also enhances self-esteem and reduces social alienation. This indicator, which is closely associated with employment (section 4.7), examines some of the characteristics of the employment undertaken by Aboriginal and Torres Strait Islander people.
- Indigenous owned or controlled land and business (section 9.2) — land can be important to Aboriginal and Torres Strait Islander people for a range of cultural, environmental social and economic reasons. The economic benefits of land depend on factors such as location, land tenure rights, the governance arrangements of landholding bodies, and the aspirations of the Aboriginal and Torres Strait Islander landowners. Aboriginal and Torres Strait Islander controlled businesses have broad benefits for the economy, their local communities and the individuals who own them.
- Home ownership (section 9.3) — home ownership, although not an aspiration of all Aboriginal and Torres Strait Islander people, is an important indicator of wealth and saving. The importance of a safe home environment is discussed in section 10.
- Income support (section 9.4) — although provision of income support can prevent individuals from experiencing deprivation, reliance on income support is correlated with the disadvantages that accompany low socioeconomic status and can contribute to long-term welfare dependency. This is not always the case, with some people accessing income support to help sustain themselves while they are studying and/or training.

As noted above, economic participation is closely related to employment (section 4.7), as well as household and individual income (section 4.10).

The extent to which people participate in the economy is closely related to their personal circumstances (Hunter and Gray 2012). Other COAG targets and headline indicators that can directly influence economic participation are:

- early childhood education (section 4.3)
- reading, writing and numeracy (section 4.4)
- school attendance in Years 1 to 10 (section 4.5)
- Year 12 attainment (section 4.6)
- disability and chronic disease (section 4.9)
- imprisonment and juvenile detention rates (section 4.13).

In addition, improving financial literacy facilitates and supports individuals, families and communities to progressively achieve greater financial security and independence by making better financial decisions, including budgeting and the purchase of financial products and services (ASIC 2014; Wagland and Taylor 2015).

Outcomes in the economic participation area can be affected by outcomes in several other strategic areas, or can influence outcomes in other areas:

- governance, leadership and culture (chapter 5)
- early child development (chapter 6)
- education and training — school engagement, transition from school to work) (chapter 7)
- healthy lives (chapter 8)
- safe and supportive communities — alcohol, drug and substance misuse and harm (chapter 11).

Attachment tables for this chapter are identified in references throughout this chapter by an ‘A’ suffix (for example, ‘table 9A.1.1’). These tables can be found on the review web page (www.pc.gov.au/oid2020).

9.1 Employment by full time/part time status, sector and occupation¹

Box 9.1.1 Key messages

- Understanding the full time/part time status, sector and occupation of people's employment provides insights into the work people do. Individuals may select their work (for example, part time work may be desirable for those with caring commitments), or it may be all that is available to them.
- Nationally, full time employment of Aboriginal and Torres Strait Islander people has changed little over the past 15 years — but the gap with non-Indigenous people has narrowed, with full time employment decreasing for non-Indigenous people. In 2017–19, the number of people aged 18–64 years in full time employment as a proportion of those employed was 63 per cent for Aboriginal and Torres Strait Islander people and 67 per cent for non-Indigenous people.
- Full time employment of Aboriginal and Torres Strait Islander people has increased in very remote areas — both as a proportion and as a number of people — but not enough to influence the overall full time employment rate. There has also been a decline in both the proportion and number of people working part time in remote areas.
- Further research into what proportion of Aboriginal and Torres Strait Islander people are working part time by preference and what proportion may be underemployed would assist in developing policies and programs better suited to the needs of Aboriginal and Torres Strait Islander people.
- While most Aboriginal and Torres Strait Islander people work in the private sector, the proportion of all public sector employees that are Aboriginal or Torres Strait Islander is higher. In 2016, almost four in every five employed Aboriginal and Torres Strait Islander people worked in the private sector (79 per cent), with one in five working in the public sector (21 per cent, compared to 15 per cent for non-Indigenous people).
- Occupations that Aboriginal and Torres Strait Islander people are employed in are more likely to be lower paying than those in which non-Indigenous people are employed. In 2018-19, the majority of Aboriginal and Torres Strait Islander people who were employed were employed as community and personal service workers (17 per cent) and labourers (15 per cent).
- Patterns in employment by industry are fairly similar for Aboriginal and Torres Strait Islander and non-Indigenous employees, with the largest proportions employed in the health care and social assistance industry (14-15 per cent).

¹ The Steering Committee notes its appreciation to Dr Heron Loban, Griffith University, who reviewed a draft of this section of the Report.

Box 9.1.2 **Measures of employment by full time/part time status, sector and occupation**

There are three main measures for this indicator:

- *Working hours (full time or part time)* is defined as the proportions of employed people who are working full time or part time hours. The main data source is the ABS National Aboriginal and Torres Strait Islander Health Survey (NATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent available data (for 2018-19) from the NATSIHS. Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/ National Health Survey (NHS)/General Social Survey (GSS), with the most recent data (for 2017-18) from the NHS. Supplementary data are also available from the Census of Population and Housing, with the most recent available data for 2016.
- *Sector of employment (public or private)* is defined as the proportion of employed people who are working in each sector. The main data source is the Census, with the most recent available data for 2016.
- *Occupation* is defined as the proportion of employed people who are working in each occupation type. The main data source is the Census, with the most recent available data for 2016.

Data are also reported for a supplementary measure of the proportion of employed people by industry of employment.

NATSIHS/NATSISS data are reported for persons aged 18–64 years to enable comparisons of outcomes in 2004-05, 2008, 2011-13 and 2014-15 with those in 1994 and 2002. Census data are available for persons aged 15-64 years. Survey and Census data are not directly comparable.

Data are available for all jurisdictions by age, sex, and remoteness.

Understanding the full time/part time status, sector and occupation of people's employment provides insights into the work people do. Individuals may select their work (for example, part time work may be desirable for those with caring commitments), or it may be all that is available to them. Where there is over- or under-representation in a category of employment, this may indicate that people prefer it or that there are barriers to entering (or exiting) that category. Information on aggregate employment and labour force participation is available in section 4.7 *Employment*.

Full time employment of Aboriginal and Torres Strait Islander people remains unchanged, but the gap with non-Indigenous people has narrowed

Full time employment of Aboriginal and Torres Strait Islander people has remained statistically unchanged since 2004-05. In 2018-19, 63 per cent of employed Aboriginal and Torres Strait Islander people aged 18–64 years were in full time employment (table 9A.1.1).

The gap between employed Aboriginal and Torres Strait Islander people and non-Indigenous people in full time employment is narrowing, with the proportion of employed non-Indigenous people in full time employment decreasing. In 2017-18, 67 per cent of

employed non-Indigenous people worked full time, compared with 71 per cent in 2004-05 (table 9A.1.1). This decrease has contributed to a narrowing of the gap from 12 percentage points in 2004-05 to four percentage points in 2018-19 (figure 9.1.1).

Figure 9.1.1 Proportion of employed people aged 18–64 years in full time employment, 2004–05 to 2017–19^{a,b,c}

^a Includes CDEP employment for 2004-05, 2007-08 and 2011–13. ^b Error bars represent 95 per cent confidence intervals around each estimate. ^c See table 9A.1.1 for detailed definitions, footnotes and caveats.

Source: ABS (unpublished) NATSIHS 2004-05; ABS (unpublished) NHS 2004-05; ABS (unpublished) NATSISS 2008; ABS (unpublished) NHS 2007-08; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS) 2012-13 (core component); ABS (unpublished) AHS 2011–13 (2011-12 Core component); ABS (unpublished) NATSISS 2014-15; ABS (unpublished) GSS 2014; ABS (unpublished) NATSIHS 2018-19; ABS (unpublished) NHS 2017-18; table 9A.1.1.

The proportion and number of Aboriginal and Torres Strait Islander employees working full time in remote areas has increased, but not enough to affect the proportion of people working full time. In 2004-05, 45 per cent (17 100) of Aboriginal and Torres Strait Islander employees were working full time, increasing to 59 per cent (20 500) of Aboriginal and Torres Strait Islander employees in 2018-19 (table 9A.1.1).

The proportion and number of employed Aboriginal and Torres Strait Islander people working part time in remote areas has declined over the same period — from 55 per cent (20 700 people) in 2004-05 to 41 per cent (14 400 people) in 2018-19 (table 9A.1.1). This decline has largely been in very remote areas, and may partly be due to the changes in the

treatment of Community Development Employment Projects (CDEP)/Community Development Program (CDP) in employment data.²

More information is needed on Aboriginal and Torres Strait Islander employees and their work preferences

Not all people want to work full time. Many people may prefer to work part time, so a mix of full and part time employment opportunities is likely to be preferable (ABS 2014; Hunter and Gray 2016). For some Aboriginal and Torres Strait Islander people, extended family commitments and expectations may place greater demands on their time (GenerationOne 2013; Walker and Shepherd 2008) and so part time work may be preferable.

There are also people who want to work full time, but are currently working part time. They are underemployed³, as part time employment is not their preference.

It is difficult to know whether people are working part time by choice or if they would prefer working full time. Further research to estimate the preferred rate of full time to part time employment for Aboriginal and Torres Strait Islander people would assist in understanding what proportion of people are working part time by preference and what proportion may be underemployed, to inform the development of policies and programs better suited to the needs of Aboriginal and Torres Strait Islander people. Where there is underemployment, similar measures to those outlined in section 4.7 *Employment* should be adopted.

While most Aboriginal and Torres Strait Islander employees work in the private sector, they are well represented in the public sector

Most Aboriginal and Torres Strait Islander employees work in the private sector. In 2016, almost four in every five employed Aboriginal and Torres Strait Islander people aged 15–64 years worked in the private sector (79 per cent), with about one in five working in the public sector (21 per cent) (table 9A.1.4). These proportions represent a shift of five percentage points to the private sector since 2006 (table 9A.1.6).

Whilst most Aboriginal and Torres Strait Islander employees work in the private sector, the proportion of employees that are Aboriginal and Torres Strait Islander people is higher in the public sector (2.3 per cent) compared to the private sector (1.6 per cent) (table 9A.1.4). Available research indicates that Aboriginal and Torres Strait Islander employees in the public sector are largely represented in lower employment classifications and lower paying roles (Inside Policy 2019).

² Prior to 2007, all CDEP participants were classified as employed. Post-2007 participants in CDP have not been classified as being in the labour force in official statistics; they have therefore generally been classified as not employed (see section 4.7 *Employment* for more detail).

³ Underemployment occurs when an individual would like to, and is available to, work more hours than they currently are.

Occupations that Aboriginal and Torres Strait Islander people are employed in are more likely to be lower paying than those in which non-Indigenous people are employed

In 2016, the majority of Aboriginal and Torres Strait Islander people who were employed were employed as community and personal service workers (17 per cent) and labourers (15 per cent) (table 9A.1.16). There has been relatively little change in the occupations of Aboriginal and Torres Strait Islander people since 2006 (all within around two percentage points), with the exception of a decline in the proportion employed as labourers (down nine percentage points, from 24 per cent) (table 9A.1.18).

The occupations Aboriginal and Torres Strait Islander people were more likely to be employed in are lower paying relative to those of non-Indigenous employees. For example, 20 per cent of employed Aboriginal and Torres Strait Islander people were managers or professionals, compared with 35 per cent of non-Indigenous employees (table 9A.1.16). Reasons for this may include that:

- Aboriginal and Torres Strait Islander people may prefer work that more tangibly helps the community, such as the work done by community and personal service workers (including health and welfare support workers and carers)
- higher paying occupations are primarily located in non-remote areas and are not necessarily available to employees in remote areas, where Aboriginal and Torres Strait Islander people are overrepresented
- higher paying jobs — such as those of managers and professionals — often require tertiary qualifications, and Aboriginal and Torres Strait Islander people are still underrepresented as holders of these qualifications (section 4.8 *Post-secondary education*) (Taylor et al. 2012).

However, the number of Aboriginal and Torres Strait Islander student enrolments in Bachelor or higher degrees has more than doubled since 2008 (section 4.8 *Post-secondary education*). Higher levels of education increase the rate of labour force participation and employment, including in higher paying occupations (section 7.3 *Transition from work to school*) which is anticipated to lead to higher Aboriginal and Torres Strait Islander incomes in the future.

Patterns in employment by industry are similar across the Australian population, with the largest proportion employed in health care and social assistance

In 2018-19, the largest proportions of employed Aboriginal and Torres Strait Islander people aged 18–64 years were in the health care and social assistance industry (15 per cent) and construction industry (14 per cent) (table 9A.1.20). Aboriginal and Torres Strait Islander people were least likely — within the industries examined — to be employed in rental, hiring and real estate services (less than one per cent) (table 9A.1.20). There were relatively small

changes in the proportions across industries since 2014-15 — with one exception, an increase of 4 percentage points in the proportion of Aboriginal and Torres Strait Islander people employed in construction (tables 9A.1.20 and 22).

Similarly, the largest proportion of employed non-Indigenous people aged 18–64 years in 2017-18 was in the health care and social assistance industry (14 per cent). The proportions employed in each of the other industries were less than 10 per cent. Non-Indigenous people were also least likely — within the industries examined — to be employed in rental, hiring and real estate services (two per cent) (table 9A.1.21).

Future directions in data

Further research into the preferred rate of full time to part time employment for Aboriginal and Torres Strait Islander people would help to estimate what proportion of people are working part time by preference and what proportion may be underemployed. This would assist public policy decisions targeted at improving employment outcomes (similar to those outlined in section 4.7 *Employment*).

9.2 Indigenous owned or controlled land and business⁴

Box 9.2.1 Key messages

- Land and waters ownership or rights, self-employment and business ownership can lead to autonomy and economic independence for all people. Control over assets is a means of wealth creation for communities and families, and it can deliver increased income and employment.
- Aboriginal and Torres Strait Islander people currently own or control about 15 per cent of the land area of Australia, and have native title rights over almost 40 per cent and Indigenous Land Use Agreements (ILUAs) covering 33 per cent (recognition of native title and ILUAs are not mutually exclusive).
- The proportion of land covered by native title and/or ILUAs has increased over time, but Aboriginal and Torres Strait Islander people's direct ownership or control over land has remained unchanged.
- Moreover, most of this land is in very remote areas, where it has a lower commercial value and higher transaction costs.
- The potential economic benefits of ownership or access to lands and waters are significant, but depend on the location of the lands and waters and on what the lands can be used for.
- For these economic benefits to be realised barriers to access to and use of land need to be removed. Governance arrangements that support shared decision-making for Aboriginal and Torres Strait Islander people alongside governments may be one way of removing barriers and increasing economic benefits.
- The number of Aboriginal and Torres Strait Islander people in business (or self-employment) appears to have grown, but as a proportion of those employed (about 11 per cent in 2018-19) has remained relatively unchanged over time. Furthermore, of those who are employed, Aboriginal and Torres Strait Islander people are less likely to be in business or self-employed than non-Indigenous people, though the gap appears to be narrowing.
- Indigenous businesses face unique barriers — and, while there are many programs and policies in place to address these barriers more needs to be known about their effectiveness and the lessons learned should then be shared.

⁴ The Steering Committee notes its appreciation to Dr Heron Loban, Griffith University, who reviewed a draft of this section of the Report.

Box 9.2.2 **Measures of Indigenous owned or controlled lands and business**

There are five main measures for this indicator.

- *Land tenure*. The different forms of land tenure reported overlap and cannot be aggregated.
 - *Indigenous owned or controlled lands* is defined as the proportion of all land which is Indigenous owned or controlled. Indigenous owned or controlled lands may be freehold, leasehold, crown, license, Aboriginal Deed of Grant in Trust or a form of land tenure that is not stated. The most recent available data for this measure are from the Indigenous Land and Sea Corporation (ILSC), as at May 2020 (all jurisdictions; remoteness). These data do not include Indigenous owned or controlled waters.
 - *Native title* is defined as the proportion of lands and inland water sources where native title has been found to exist wholly or partially.
 - *Indigenous land use agreements* (ILUAs) has two sub measures, defined as:
 - ... the number of ILUAs that intersect each State/Territory
 - ... the proportion of lands and inland waters that are subject to ILUAs

The most recent available data for the measures of native title and ILUAs are for 30 June 2019, from the National Native Title Tribunal (NNTT) (all jurisdictions; remoteness).
- *Economic benefits of Indigenous rights to lands* is reported using qualitative information about home ownership, service delivery, the customary economy, tradeable assets, eco-services/land management and commercial businesses.
- *Self-employment* is defined as the number of employed people aged 18–64 years who are self-employed; this is used as a proxy for Indigenous businesses. The main data source is the ABS National Aboriginal and Torres Strait Islander Health Survey (NATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS) with the most recent data for 2018-19 from the NATSIHS (all jurisdictions; age; sex; non-remote areas only). Data for the non-Indigenous population are sourced from the ABS National Health Survey, with the most recent data for 2017-18. Supplementary data are available from the ABS Census of Population and Housing (Census) with the most recent data for 2016 (all jurisdictions; age; sex; remoteness). Survey and Census data are not directly comparable.

Land and waters ownership or rights, self-employment and business ownership can lead to autonomy and economic independence for all people. Control over assets is a means of wealth creation for communities, families and future generations, and it can deliver increased income and employment.

Land and waters ownership or rights are particularly important for Aboriginal and Torres Strait Islander people. Lands and waters are more than assets, they are fundamental to the identity of Aboriginal and Torres Strait Islander people. Having rights to lands and waters can also provide social and economic benefits to Aboriginal and Torres Strait Islander people. Salmon et al (2019, p. 9) found that for Aboriginal and Torres Strait Islander people “positive relations with Country fostered through caring for and being on Country help to develop key skills and knowledges, increasing a sense of self-worth and autonomy”.

Self-employment and participation in ownership of enterprises can allow individuals to improve overall levels of economic participation through increased financial capacity and independence. It can also deliver commercial benefits such as increased income, profits and employment. Encouraging growth in Indigenous businesses is one means of increasing Aboriginal and Torres Strait Islander people's employment (section 4.7 *Employment*).

Aboriginal and Torres Strait Islander people have three main forms of rights or tenure over their traditional lands, which determine the economic benefits they can derive from the land

Aboriginal and Torres Strait Islander people have three main forms of rights and/or tenure over lands and waters in Australia, by which they can potentially derive some economic benefit.

- *Indigenous owned or controlled lands and waters* are those owned or controlled through freehold, leasehold, crown, license, Aboriginal Deed of Grant in Trust or other forms of land title or through water allocation. The extent of the economic and other benefits from lands and waters that can be derived depends on the title type. The Indigenous Land and Sea Corporation (ILSC) has a significant role in this area:
 - The ILSC purchases areas of lands and waters that cannot be acquired by other means (for example, land not available for claim under native title) and then divests them to prospective Aboriginal and Torres Strait Islander groups. The ILSC monitors the divested properties and, where they are at risk of being lost from the Indigenous estate⁵ due to insolvency, they are reacquired. In 2018-19, the ILSC acquired five properties, reacquired three properties and divested seven properties (ILSC 2019). Table 9A.2.11 provides a map of the ILSC's land acquisition activity.
- *Native title* is land for which the Australian legal system⁶, through the *Native Title Act 1993*, recognises Aboriginal and Torres Strait Islander peoples' relationships to lands and waters arising from their continuous connection to Country (Pearson 2017). It provides varying degrees of control and management of lands and waters⁷, but not necessarily possession or ownership (Pearson 2010). Some (but not all) traditional owners (or claimants) have had their pre-existing rights recognised in the legal system,

⁵ The Indigenous estate comprises the assets held, or reasonably likely to be held, by or for the benefit of Aboriginal and/or Torres Strait Islander people (NIAA nd)

⁶ In 1992, in the *Mabo* case the High Court of Australia decided that the common law of Australia would recognise native title. This decision led to the *Native Title Act 1993 (Cth)*, which has subsequently been amended several times. A range of other legislation and arrangements, including Indigenous laws, affect Aboriginal and Torres Strait Islander peoples' title-holding and management of lands and waters. For example, several native title holder groups may come together to protect and manage a river as a single living system (Poelina 2019).

⁷ Native title and associated rights can co-exist with some forms of land tenure such as pastoral leases and Crown land, but can be extinguished by others such as freehold titles (ATIC nd). Native title rights and interests may include rights to: live on the area and/or to access the area for traditional and cultural reasons (ATIC nd).

often with non-exclusive rights co-existing with other parties, while others have had title extinguished (Reid 2018). Native title rights allow Aboriginal and Torres Strait Islander people the right to practice their customs that existed pre-colonisation, but does not grant the right to use the land for economic purposes (Creamer 2020) and therefore commercial gain can be difficult (Department of the Prime Minister and Cabinet 2018).

- Compensation is to be provided to native title holders if the government stops native title holders from exercising their rights — for instance, by extinguishing native title to build a bridge or a road (Kimberley Land Council 2019). A High Court ruling in 2019 defined the definition of compensation as including both the loss of economic value and an estimation of the cultural loss caused by the relevant extinguishing acts (Dillon 2019).
- *Indigenous Land Use Agreements* (ILUAs) are a mechanism by which Aboriginal and Torres Strait Islander people can grant other parties access to or use of their lands and waters, in exchange for some form of benefit. The *Native Title Act 1993 (Cth)* allows Aboriginal and Torres Strait Islander people the right to make these Agreements with other parties (government or mining companies, for example) about the use or management of their lands or waters, either instead of, or in addition to, determining native title. For example, native title groups can enter into ILUAs — agreements that grant access or use of their lands or waters — in exchange for compensation, employment, training or other benefits for the native title owners (ATIC nd).

Each of these arrangements can provide economic benefits in terms of income or jobs, however they cannot always guarantee connection to lands for cultural and social activities. The social and cultural importance of lands and waters to Aboriginal and Torres Strait Islander people is discussed in section 5.8 *Access to traditional lands and waters*.

Aboriginal and Torres Strait Islander people currently own or control about 15 per cent of the land area of Australia and have native title rights over about 40 per cent...

The different forms of land rights or tenures overlap (and so cannot be aggregated) but their coverage is as follows:

- Nationally in 2020, under different forms of title Aboriginal and Torres Strait Islander people directly owned or controlled 15 per cent of the land area of Australia (table 9A.2.1).
- As at 30 June 2019, native title had been determined to exist in full or in part across 38 per cent of the total area of Australia, with the largest proportions in South Australia (55 per cent) and Western Australia (61 per cent) (tables 9A.2.3).
 - Applications for determinations of native title commence as proceedings in the Federal Court and remain until they are resolved through determination, withdrawal, strike-out or dismissal. By 30 June 2019, a total of 452 determinations had been registered since 1994 — including 78 determinations that native title does not

exist — with 163 active applications currently in the system (Federal Court of Australia 2019).

- Under the *Native Title Act 1993 (Cth)*, native title is extinguished over areas that were granted as freehold on or before 23 December 1996. Native title claimants cannot include any of these lands or waters in their applications⁸ (National Native Title Tribunal nd). This mainly affects non-remote areas where private property rights were established and public infrastructure existed in 1996.⁹
- Although native title also applies to waters, Aboriginal and Torres Strait Islander peoples' control of waters has been difficult to achieve because of the existing rights of other water users that hold water licences (Hoey 2019; Jackson 2017; PC 2017). For example, Aboriginal entities only control 0.2 per cent of the water entitlements in the NSW portion of the Murray Darling Basin, yet comprise 9 per cent of the local population (Hartwig, Jackson and Osborne 2020). In 2020, native title exists over 1.3 per cent of Australia's sea maritime boundaries; this is an increase of 0.3 per cent since 2011 (The Commonwealth Government and Coalition of the Peaks 2020).
- On 30 June 2019, 33 per cent¹⁰ of the total area of Australia was subject to ILUAs, (table 9A.2.6). The total number of ILUAs increased from 84 on 30 June 2003 to 1289 on 30 June 2019 (table 9A.2.5) — with almost two-thirds of all ILUAs (64 per cent) in Queensland, and with 58 per cent of land in South Australia subject to an ILUA (table 9A.2.5).

Tables 9A.2.7–11 contain maps showing the areas directly owned or controlled by Aboriginal and Torres Strait Islander people, or covered by native title registered ILUAs, by State and Territory and by remoteness.

... but most of the owned and controlled and native title land is in very remote areas, where it has low commercial value and high transaction costs

Much of the Aboriginal and Torres Strait Islander owned or controlled land in Australia is of great cultural significance, but has low commercial value and high transaction costs due to remoteness. For areas owned or controlled by Aboriginal and Torres Strait Islander people, almost all (98 per cent) are in very remote areas; further, the majority of land is classified as 'tenure not stated', so it cannot be determined what economic development

⁸ A native title application may be made over freehold land on the basis that it was invalidly granted, but the chances of this happening are very low (National Native Title Tribunal nd).

⁹ An article by Fryer-Smith (2000) stated that 'approximately 21 per cent of Australia's land area is currently freehold'. Most freehold land is likely to be located in urban areas (based on information on WA and the NT from AusTrade nd).

¹⁰ Land subject to ILUAs refers to the total area of a State or Territory covered by ILUAs registered with the NNTT as a proportion of the total area of the State or Territory. ILUAs can overlap (a place may be subject to multiple ILUAs) but these figures do not include any double counting. Data on the gross area of ILUAs are in table 9A.2.5.

capacity the land has (table 9A.2.2). Similarly, almost all (95 per cent) of native title determinations are in very remote areas (primarily due to extinguishment prior to 1996 discussed above) (table 9A.2.4). For ILUAs the proportion in very remote areas was lower, at 75 per cent (table 9A.2.6).

Furthermore, constraints around native title may be preventing native title holders from using their property rights to engage in the economy without having to surrender and permanently extinguish their native title rights and interests (Wensing 2016). The Australian Trade and Investment Commission (nd) clarifies the differences between land tenure and native title as:

...land tenure are not the same as native title because tenure often includes a range of ownership rights that create commercial value and enable the traditional owners to pursue economic development opportunities. Native title rights by contrast comprise a bundle of residual rights related to traditional affiliations that have continued without extinguishment for the last two centuries since European settlement.

The proportions of lands and waters covered by native title and/or ILUAs have increased over time, but the proportion of land under direct ownership or control has not changed

Aboriginal and Torres Strait Islander people's tenure over lands and waters have increased over the past 15 years (figure 9.2.1). For native title and ILUAs, this increase has been by about 30 percentage points each. However, the proportion of land that is under direct ownership or control has remained unchanged since 2014, at about 15 per cent¹¹ (table 9A.2.1).

¹¹ Duplications of land parcels in the property register have been removed since the 2016 reporting period. That change has meant that the data show a one percentage point decrease in the proportion of Indigenous held land in 2020 compared with 2016, but no actual decrease in land area has occurred.

Figure 9.2.1 **Proportion of land where Aboriginal and Torres Strait Islander people have some form of tenure, by tenure type, 2004 to 2020^{a,b}**

^a The apparent overall decrease in Indigenous owned or controlled land since 2016 is due to revisions to the property register, no actual decrease has been observed. ^b See tables 9A.2.1, 9A.2.3 and 9A.2.5 for detailed definitions, footnotes and caveats.

Source: Indigenous Land and Sea Corporation 2020 (unpublished), National Native Title Tribunal (unpublished); tables 9A.2.1, 9A.2.3 and 9A.2.5.

The potential economic benefits of ownership or of access to lands and waters are significant, but depend on what the lands and waters can be used for...

The potential for deriving economic benefits from activities on lands and waters depends on: their location and its remoteness (discussed earlier); the attributes of the land; the extent of ownership and control over the land (for example, communal or otherwise restricted land title may limit the ability to sell or lease the land, or restrict land use); and the capacity and aspirations of the traditional owners.

Potential economic benefits from rights to lands and waters may accrue to Aboriginal and Torres Strait Islander people through:

- *Home ownership* — Private home and land ownership can provide economic benefits from living in, renting out, selling or borrowing against the property (see section 9.3 *Home ownership* for more information on home ownership). Many Aboriginal and Torres Strait Islander people live in community housing built on communally owned land, where ‘inalienable’ communal title prevents land from being sold or mortgaged. While this ensures ongoing Indigenous ownership of land, it has created barriers to individuals using land for housing or business or as security for a loan

(though the granting of 99-year leases in some jurisdictions, such as Queensland and South Australia, goes some way towards addressing this issue).

- *Township leasing* — In 2006, the Commonwealth amended the Northern Territory *Aboriginal Land Rights (Northern Territory) Act 1976* and provided incentives (such as building community housing) to communities on Aboriginal land in the Northern Territory to lease their townships in exchange for rent. Some are leased to the Executive Director of Township Leasing (a statutory authority) which then administers and manages the sub-leases (including to schools and local councils), while others are managed by community corporations.
- *Service delivery* — Communally owned land can be used to site and deliver services (such as community housing, aged care and postal services) to Aboriginal and Torres Strait Islander communities, while income from land investments can enable the funding of services.
- *The customary and hybrid economy* — Aboriginal and Torres Strait Islander people can benefit from customary (non-monetary) activities associated with lands and waters such as harvesting or creating products for sale (Sanders 2016).
- *Providing access to lands and waters in exchange for compensation* — Aboriginal and Torres Strait Islander people have negotiated land use agreements (see the earlier discussion on ILUAs) with governments and others (for example, mining companies and pastoralists). These agreements can yield benefits in the form of: compensation; support for community services, facilities and infrastructure; employment and training programs; and protection of cultural sites (National Native Title Tribunal nd).
- *Eco-services and lands and waters management* — Many programs recognise and employ Aboriginal and Torres Strait Islander people with land management skills to jointly manage conservation reserves, national parks and marine parks. The Indigenous Protected Areas (IPAs) program aims to assist Aboriginal and Torres Strait Islander people in promoting a balance between conservation and other sustainable land uses to deliver social, cultural and economic benefits for their local communities. In 2020 there are 76 IPAs in place spanning 67 million hectares; an increase of 6 IPAs and 2 million hectares since 2016 (Department of the Environment nd; NIAA 2020).
- *Commercial businesses* — Enterprise development on Indigenous owned or controlled lands and waters provides opportunities for economic development, while allowing Aboriginal and Torres Strait Islander people to maintain a close connection to the land (Bawinanga Aboriginal Corporation 2007; Fordham, Fogarty and Fordham 2010).

... but for these economic benefits to be realised barriers to the access and use of lands and waters must be removed; governance that supports shared decision-making could be key

Box 9.2.3 provides examples of shared decision-making between Aboriginal and Torres Strait Islander people and governments, with the aim of deriving benefits from lands and waters.

Box 9.2.3 Shared decision-making with the aim of deriving benefits from lands and waters

There are various approaches to increasing Aboriginal and Torres Strait Islander people's access to, and control over, lands and sea. Three examples of shared decision making aimed at facilitating this are provided below.

Traditional Owners and the Queensland Government negotiate annual work plans for the management of lands and sea

Since the commencement of the Queensland Indigenous Land and Sea Ranger Program in 2007, the Queensland Government partners with Aboriginal and Torres Strait Islander communities to care for land and sea under Queensland jurisdiction.

Annual work plans are developed in partnership between the Traditional Owners, local communities and the Queensland Government regarding the conservation, protection and management of the lands and sea. The Queensland Government provides \$12 million per year in grants to Aboriginal and Torres Strait Islander organisations to employ Ranger groups and implement the annual work plans. The program supports the employment of over 100 Aboriginal and Torres Strait Islander people across 24 regional and remote communities.

The Aboriginal Land Council of Tasmania (ALCT), a statutory body, works in conjunction with the Tasmanian Government to facilitate the return of land to Aboriginal people

The ALCT promotes and supports the cultural aspirations of Aboriginal people and negotiates with the Tasmanian Government for the return of land, and for funding support to manage Aboriginal lands. Under this arrangement more than 55 thousand hectares of land has been returned to Aboriginal people in Tasmania, with the majority of this land returned in 1995 and 2005.¹²

The ALCT was established under the Aboriginal Lands Act 1995 (Tas) (the Act) which specifies the functions and powers of the ALCT. The ALCT has eight Aboriginal members, elected by Aboriginal persons aged 18 years or over, with two members representing each of the three mainland regions of Tasmania and one each from Flinders Island and Cape Barren Island. The ALCT is provided with funding by the Tasmanian Government for its operations.

(continued next page)

¹² In 1995, 13 parcels of land were returned; and in 2005, Cape Barren Island and Clarke Island were returned.

Box 9.23 (continued)

Under the Act, Crown land can be returned to Aboriginal people with the agreement of the Parliament, by a mechanism that transfers the title to the ALCT, which then holds the title in perpetuity for Aboriginal people. In 2012 and 2013 attempts to return Crown land including sites at Irapuna (Eddystone Point) and Rebecca Creek failed to pass the Legislative Council.

Despite these challenges, the return of more land to its original custodians remains a key part of the Tasmanian Government's policy. As such, a review of the model for returning land to the Aboriginal community has been initiated to identify barriers to returning land, and seeking options to improve the land return process.

Furthermore, the political and social landscape in which land return and management is progressed in Tasmania has changed significantly since the Act passed in 1995. It has become more common for the ALCT to enter into its own property acquisition arrangements with partner organisations outside of the Act.¹³ In addition, the ALCT has also acquired land outside the Act.¹⁴

The Aboriginal Lands Trust, a statutory board, works with the Western Australian Government to determine to whom Aboriginal people's estate is divested

The ALT is a statutory board convened under the *Aboriginal Affairs Planning Authority Act 1972* (WA) and is responsible for providing advice to the Minister for Aboriginal Affairs on ALT land issues, including divesting parcels of land from the ALT estate to Aboriginal people. Divestment provides Aboriginal people with both ownership and management rights over the land.

The ALT Board comprises seven members. Aboriginal people from WA can put in an expression of interest to be on the Board and are considered for selection by the Western Australian Government.

The ALT estate covers approximately 10 per cent of land in Western Australia. Aboriginal people and organisations with an interest in the land parcels are encouraged to determine the most appropriate Aboriginal organisation to receive the divestment of the land. The divestment process requires the development of a divestment strategy for recommendation to the Board. The divestment strategy involves ongoing engagement and negotiation between the Department of Planning, Lands and Heritage and interested Aboriginal people and organisations. The Board decides whether or not the land should be divested to a particular organisation or group of people, the appropriate tenure and conditions for divestment and makes a recommendation to the Minister of Aboriginal Affairs for approval, together with recommendations for the Minister for Lands, prior to divestment occurring.

Source: Department of Finance (2020); DPLH (2019, 2020), Tasmanian Government (2018, 2019); Tasmanian Government (unpublished), Queensland Department of Environment and Science (2018) Queensland Government (nd), Queensland Government (unpublished), Western Australian Government (unpublished).

¹³ For example, the Kings Run property is a 338 hectare site between the Arthur River and Marrawah in North-West Tasmania and was purchased by the ALCT through a collaborative funding arrangement with other organisations.

¹⁴ This saw the private gifting of 110 hectares in eastern Tasmania by the Teniswood family in 2019 to the ALCT.

Changes in technology and infrastructure will alter the opportunities for Aboriginal and Torres Strait Islander people to derive economic benefit from their lands and waters if they desire. Box 9.2.4 provides a case study of how shared decision-making aims to facilitate this.

Box 9.2.4 Joint Governance in the Dampier Peninsula Project

The Dampier Peninsula Project (the Project) aims to maximise the benefits for the local Aboriginal communities, by balancing economic, cultural, social and environmental values

The Project, which began in 2019, aims to maximise the benefits for Aboriginal communities and industries on the Dampier Peninsula of Western Australia, from increased visitors due to the sealing of the Broome–Cape Leveque road. The sealing of the road is expected to increase the number of day visitors to the Dampier Peninsula, which will increase both the social and economic opportunities for, and impacts and risks to, the Aboriginal communities.

The Dampier Peninsula Working Group (DPWG) was established by Dampier Peninsula communities in 2017 to represent the interests of local communities and industries. As part of the Project, the DPWG are also working with the Western Australian Government to maximise the opportunities for local communities and industries, while also protecting and enhancing local cultural, social and environmental values.

Participation by local Aboriginal communities in decision-making is key to ensuring this balance, and is achieved through the DPWG...

For the Project, the DPWG shares decision-making power with the Western Australian Government by:

- providing recommendations to the Senior Officers Working Group (SOWG), which is made up of employees from 19 Western Australian Government agencies who implement the recommendations
- having the DPWG chair, and the local coordinator as part of the SOWG.

All recommendations from the DPWG are forwarded to the SOWG, with decisions and funding commitments considered by Directors General and the Jobs and Economic Development sub-committee of the Western Australian Cabinet.

... that has the representation and resources to operate effectively

DPWG members are representatives from the four largest Aboriginal communities, the four native title groups, Aboriginal ranger groups and outstations¹⁵ on the Dampier Peninsula. The DPWG decide their own structure, membership and set the agenda for their meetings. Funds from the Western Australian Government are used to employ a full time coordinator through the Kimberley Land Council to support the DPWG, and to reimburse members for meetings and travel costs.

(continued next page)

¹⁵ An outstation is a very small permanent community of Aboriginal people, often family groups. These can also be known as homeland communities.

Box 9.2.4 (continued)

The DPWG has identified key priorities for facilitating economic opportunities and protecting local values and secured additional funding for infrastructure

After consultation with communities the DPWG identified four work streams: visitor management, social support, economic opportunities and project coordination.

One of the sub projects identified is 'land tenure and approvals support.' Simplifying the land tenure and approvals is intended to assist local Aboriginal people and organisations to undertake a commercial business or expand existing operations, and be compliant with statutory requirements on Native Title Determined Lands.

Source: Department of Premier and Cabinet (unpublished); Government of Western Australia (2019a, 2019b, 2019c); Kimberley Land Council (2020).

There are also other ways to support Aboriginal and Torres Strait Islander people in realising the economic benefits of their lands and waters

Ways to address barriers that restrict Aboriginal and Torres Strait Islander people's ability to create economic development opportunities on Indigenous land have previously been identified (Australian Human Rights Commission roundtable with Aboriginal and Torres Strait Islander leaders on economic development and property rights), and comprise five key areas:

- *Fungibility¹⁶ and native title* — at present native title is communally held and inalienable (that is, it cannot be changed or removed). But this should not be used to prevent it from creating future economic gain; that is, fungibility and native title should be able to co-exist. Enabling this co-existence would require a change to the Native Title Act.
- *Business development support and succession planning* — ensuring that Aboriginal and Torres Strait Islander people have sound and sustainable governance and structures in place to successfully engage in business and manage their estates (see also the section 4.10 *Household and individual income* on the importance of financial literacy).
- *Financing economic development* — creating financial products, such as bonds, to underwrite economic development by engaging the financial services sector and related Aboriginal and Torres Strait Islander organisations.
- *Promoting Aboriginal and Torres Strait Islander peoples' right to development* — promoting opportunities for development on Indigenous land including identifying options to provide greater access to resources (AHRC 2015).

¹⁶ Fungibility refers to the notion that goods or property are interchangeable with other commodities of the same kind and amenable to being bought and sold on a market. Aboriginal and Torres Strait Islander peoples' interests in land generally comes from their connection to particular areas and so the land doesn't have the quality of fungibility (AHRC 2016).

Five key areas for governments to focus their efforts were identified in 2015 (Senior Officers Working Group 2015):

- *Gaining efficiencies and improving effectiveness in the process of recognising rights* — the process of recognising Aboriginal and Torres Strait Islander people's rights and interests in land of under the Native Title Act and statutory land rights regimes can be time consuming and expensive. For example, as at 30 June 2019, 122 of the current 339 native title cases in the Federal Court had been filed before 2014 (that is, more than one-third of then-current cases were filed in the court more than five years ago) (Federal Court of Australia 2019 sec. appendix 5).
- *Supporting bankable interests in land* — As Indigenous land has mostly communal and inalienable title (meaning that it cannot be sold or mortgaged), innovative mechanisms are required so that land can be used as collateral for a loan. Establishing a forum for Aboriginal and Torres Strait Islander stakeholders and the banking sector to better understand opportunities for private investment could help identify appropriate mechanisms.
- *Improving the process for doing business on Indigenous owned lands and land subject to native title* — Compliance with the processes specified under the Native Title Act and the various statutory land rights regimes can be time consuming and expensive, and a deterrent to investment. More efficient and accountable decision-making processes could facilitate greater investment and economic development opportunities¹⁷.
- *Investing in the building blocks of land administration* — Remote Indigenous communities often have limited or no access to the basic building blocks of land administration such as cadastre surveys, town planning and zoning, and essential services infrastructure.¹⁸ State and territory legislation such as environmental, planning and heritage regulations, when applied to remote Aboriginal and Torres Strait Islander communities, can unreasonably restrict development opportunities.
- *Building capable and accountable landholding and representative bodies* — Much of the institutional infrastructure of landholding and representative bodies was developed to achieve successful claims for recognition of native title or Indigenous land. This infrastructure has not yet fully adapted to supporting the use of those rights as part of the economy (Australian Government 2015).

The Australian Government and the states and territories are implementing the recommendations in the five focus areas 'subject to their unique circumstances and resource constraints' (COAG 2015; DITRDC 2019).

¹⁷ One of the recommended actions for governments supporting this area was amending the Native Title Act to create choice in decision-making for native title holders and greater. At the same time, the *Aboriginal Land Rights (Northern Territory) Amendments Act 2015* was amended to allow NT land councils to delegate certain functions and powers to Aboriginal corporations and improve their capacity to take advantage of economic opportunities.

¹⁸ A cadastre is a comprehensive recording of the owners of the land and the amount and value of the land.

The Our North, Our Future White Paper also identified ways to ‘simplify and modernise’ land arrangements in Northern Australia (Australian Government 2015). Pilot programs to broaden the commercial development of land and increase business activity are being trialled (Office of Northern Australia 2019).

The number of Aboriginal and Torres Strait Islander people who are self-employed appears to have grown, but as a proportion of those employed it is relatively unchanged

The number of Aboriginal and Torres Strait Islander people who are in business (or self-employment) has grown in recent decades (Shirodkar, Hunter and Foley 2018), at a similar rate to employment. Between the 2006 and 2016 Censuses the number of identified Aboriginal and Torres Strait Islander people aged 18–64 years who were self-employed grew by almost 70 per cent; however, as a share of those employed the proportion was relatively unchanged (figure 9.2.2).

Figure 9.2.2 Aboriginal and Torres Strait Islander people who are self-employed, as a number and proportion of those employed aged 18–64 years^a

^a See table 9A.2.15 for detailed definitions, footnotes and caveats.

Sources: ABS (unpublished) derived from the Census of Population and Housing various years (2006, 2011 and 2016); table 9A.2.15.

Self-employment as a share of employment increases with age and is more common for men. The proportions of those employed who are self-employed are highest for males aged 55–64 years for both Aboriginal and Torres Strait Islander and non-Indigenous people (table 9A.2.15).

Similar patterns of self-employment are indicated in survey data reported over a longer period (from 1994 to 2018-19) for Aboriginal and Torres Strait Islander people in non-remote areas. However, large margins of error limit the analysis. In 2018-19, 11 per cent of employed Aboriginal and Torres Strait Islander people were self-employed, with the only statistically significant difference in the past 25 years occurring in 2012-13 with the proportion about five percentage points lower (table 9A.2.12).

Aboriginal and Torres Strait Islander people who are employed are less likely to be in business or self-employed than non-Indigenous people, but the gap appears to be narrowing

Aboriginal and Torres Strait Islander people who are employed are less likely to be in business or self-employed than non-Indigenous people. In 2018-19, employed non-Indigenous people were 1.6 times more likely to be self-employed than employed Aboriginal and Torres Strait Islander people. However, the gap in self-employment rates appears to have narrowed, having been twice as large up to 2001 (figure 9.2.3).

Figure 9.2.3 Proportion of employed people who were in business or self-employed, by Indigenous status, 1994 to 2018-19^a

^a See table 9A.2.12 for detailed definitions, footnotes and caveats.

Aboriginal and Torres Strait Islander-owned businesses face barriers to establishment and growth...

Supply Nation and First Australians Capital (2018) summarised statistics, expert interviews and literature reviews, and identified the following barriers to the establishment and growth of Indigenous businesses:

- process and capabilities — limited ability for large businesses to accommodate small-scale Aboriginal and Torres Strait Islander business in the supply chain
- business skills — limited holistic business skills and/or operational experience
- networks and support — limited access to networks for developing business membership and early stage support as well as advice on scaling and access to resources to expand business
- entrepreneurship and business mindset — contributing to the community rather than increasing personal income¹⁹, was the most common reason for starting a business
- start-up and scale funding — start-up funding was affected by a lack of inter-generational wealth, low personal savings and low home ownership, while difficulties existed in accessing funding with the right risk profile and size to scale the businesses.

... but greater understanding about the effectiveness of the programs and policies aimed at removing these barriers is needed

There are currently many programs and policies aimed at addressing these unique barriers²⁰, but we do not know how effective they are in doing so. For example, an audit of the Indigenous Procurement Policy found that the design of the policy was sound but there had been inadequate implementation planning and delays in the process (Australian National Audit Office 2020). More guidance and attention was needed on the implementation of the policy to ensure that it was meeting its objective of increasing economic opportunities for Aboriginal and Torres Strait Islander people and businesses (Australian National Audit Office 2020). The ANAO (2020) recommended implementing an evaluation strategy that clearly outlines the approach to measuring the impacts of the policy on Aboriginal and Torres Strait Islander employment and business outcomes.

Evaluations should be conducted by evaluators who are technically and culturally capable (PC 2020). The lessons learned from the evaluations should be considered when formulating or modifying policies and programs.

¹⁹ This can be a barrier to growth, if growing the business would be detrimental to the community. For example, a business might be able to increase its profits by moving manufacturing from the community to an area with cheaper labour, but an owner more concerned with the community might not do this because it would reduce the number of jobs in the community and leave the community worse off.

²⁰ See the Indigenous Business Sector Strategy (Australian Government 2018) and Indigenous Business Growth (Supply Nation and First Australians Capital 2018) for examples.

Future directions in data

There is a lack of data on Aboriginal and Torres Strait Islander peoples' ownership and control of waters. Collecting these data would be beneficial to our understanding of the amount of economic opportunity available to Aboriginal and Torres Strait Islander people from water resources.

The tenure type for Indigenous owned or controlled land is recorded as 'not stated' in around 80 per cent of the ILSC data on Indigenous owned or controlled land (table 9A.2.1). As different tenure types have different governance arrangements and rules for how the land can be used, better information on tenure type is critical.

Data on self-employment for Aboriginal and Torres Strait Islander people and non-Indigenous people in remote areas are not currently available from ABS surveys — largely due to the difficulty of obtaining a sufficient sample for reliable estimates. An alternative approach to collecting these data should be investigated.

9.3 Home ownership²¹

Box 9.3.1 Key messages

- Home ownership is an important indicator of wealth and saving. It also provides security of tenure and allows greater control over living arrangements which are important for improving people's physical health, mental wellbeing, feelings of safety, education, employment and intergenerational wealth.
- In 2018-19, one in three Aboriginal and Torres Strait Islander households owned or were purchasing a home, and about three in ten Aboriginal and Torres Strait Islander adults lived in a home owned by a household member. These figures have remained relatively unchanged over the past 10–15 years.
- For Aboriginal and Torres Strait Islander adults, higher proportions were living in homes owned by a household member in major cities and inner regional areas than in other areas.
- While the proportion living in a home owned by a household member was lower than for non-Indigenous adults, the gap has decreased since 2002 (from 46 to 37 percentage points). This is primarily due to a decline in the proportion of non-Indigenous adults living in homes owned by household members.
- Low rates of home ownership for Aboriginal and Torres Strait Islander people likely result from both historic policies and their ongoing intergenerational impact, and current barriers to home ownership (such as lower incomes, lower employment rates, lack of savings for a deposit or insufficient credit history, racism and land tenure constraints). But some Aboriginal and Torres Strait Islander people may find that the concept of individual home ownership does not work for their community.
- A range of policies are in place to overcome these barriers and increase home ownership for Aboriginal and Torres Strait Islander people. Evaluations (with Aboriginal and Torres Strait Islander perspectives at the centre) would improve our understanding of their effectiveness (or lack thereof) in increasing homeownership.

²¹ The Steering Committee notes its appreciation to Dr Heron Loban, Griffith University, who reviewed a draft of this section of the Report.

Box 9.3.2 Measures of home ownership

There are two main measures for this indicator.

- *Living in a home owned with or without a mortgage* is defined as the proportion of people aged 18 years or over who were, living in homes that someone in their household owned, with or without a mortgage. The main data source is the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS)/ National Aboriginal and Torres Strait Islander Health Survey (NATSIHS), with the most recent data available for 2018-19 (NATSIHS). Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/ General Social Survey (GSS)/ National Health Survey (NHS), with the most recent data available for 2017-18 (NHS). Supplementary data are also available from the Census of Population and Housing, with the most recent available data for 2016. Survey and Census data are not directly comparable.
- *Proportion of Aboriginal and Torres Strait Islander households owning or purchasing a home* is defined as the number of Aboriginal and Torres Strait Islander households owning or purchasing a home as a proportion of the total number of Aboriginal and Torres Strait Islander households. An Aboriginal and Torres Strait Islander household is defined as a household where one or more occupants identify as being of Aboriginal and/or Torres Strait Islander origin. Data are sourced from the NATSISS/ NATSIHS, with the most recent data available for 2018-19 (NATSIHS) (all jurisdictions; location; tenure).

Home ownership is an important indicator of wealth and saving. Owning a home provides a secure asset base against which people can borrow, contributes to financial stability and presents opportunities for wealth creation (Forrest 2014; Senior Officers Working Group 2015).

Home ownership also provides security of tenure and greater control over living arrangements (Anderson et al. 2018). Having this security and control are important for improving people's physical health, mental wellbeing, feeling of safety, education and employment opportunities and inter-generational wealth creation (Brackertz, Davison and Wilkinson 2017; Deloitte Access Economics 2019). Home ownership is closely related to other indicators in this report, particularly those concerning education (see section 4.3 *Early childhood education*, section 4.4 *Reading, writing and numeracy*, section 4.5 *Year 1 to 10 attendance*, section 4.6 *Year 12 attainment*, and section 4.8 *Post-secondary education*), employment (section 4.7 *Employment*) and people's home environment (chapter 10 *Home environment*).

However, the concept of 'home ownership' does not necessarily have the same meaning for some Aboriginal and Torres Strait Islander people as it does for many non-Indigenous people. Some Aboriginal and Torres Strait Islander people have a preference for communal or community ownership of housing rather than individual ownership (Crabtree et al. 2018; Terrill 2017). The communal ownership perspective focuses 'on strengthening culture and community, promoting health, fostering stability, or any of the other functions of housing', which are important to many Aboriginal and Torres Strait Islander people (Crabtree 2016, p. 230). But the security of tenure that can be provided by individual home ownership is also important to many Aboriginal and Torres Strait Islander individuals and families.

Furthermore, the desire to own a home is not homogenous, and there are benefits to having a diverse range of housing tenures available to suit a range of preferences. For example, some Aboriginal and Torres Strait Islander people prefer to rent (Crabtree et al. 2018). In 2018-19, almost two-thirds of Aboriginal and Torres Strait Islander households lived in rental properties (ABS 2019) — but it is not known what proportion chose to rent for mobility or other reasons, as distinct from the proportion who rented but would have preferred to own a home if they could.

About three in ten Aboriginal and Torres Strait Islander adults live in homes owned by a household member, a proportion that has remained unchanged since 2002...

The proportion of Aboriginal and Torres Strait Islander adults living in a home owned, with or without a mortgage, by a member of their household has remained relatively unchanged since 2002 (from 27 per cent in 2002 to 31 per cent in 2018-19). While, the proportion of Aboriginal and Torres Strait Islander adults living in homes owned with a mortgage increased slightly from 17 per cent in 2002 to 21 per cent in 2018-19, the proportion living in homes owned outright in 2018-19 remained at 10 per cent — the same as in 2002 (table 9A.3.1).

...but this proportion is lower for Aboriginal and Torres Strait Islander adults living in remote areas

For Aboriginal and Torres Strait Islander adults, higher proportions in major cities and inner regional areas were living in homes owned by a household member than in other areas. In 2018-19, around two in five Aboriginal and Torres Strait Islander adults in major cities and inner regional areas lived in a house owned by a household member, compared with 25 per cent in outer regional areas, 19 per cent in remote areas and 6 per cent in very remote areas (table 9A.3.1).

The gap with non-Indigenous adults has narrowed over time, driven by a decrease in the proportion of non-Indigenous adults living in homes owned by a household member

The gap between the proportions of Aboriginal and Torres Strait Islander adults and non-Indigenous adults living in a home owned, with or without a mortgage, by a household member has narrowed since 2002 (from 46 percentage points in 2002 to 37 percentage points in 2017-19). This narrowing was primarily driven by a decrease in the proportion of non-Indigenous adults living in homes owned by a household member (from 74 per cent in 2002 to 68 per cent in 2017-18) (tables 9A.3.1-2).

However, the proportion of non-Indigenous adults living in a home owned by a member of their household is still twice the proportion for Aboriginal and Torres Strait Islander adults (table 9A.3.1), and this gap increases as remoteness increases (figure 9.3.1).

Figure 9.3.1 Proportion of adults living in homes owned by a household member, by remoteness and Indigenous status, 2017–19^{a,b,c}

^a See table 9A.3.1-2 for detailed definitions, footnotes and caveats ^b Error bars represent 95 per cent confidence intervals around each estimate. ^c The rate ratio is of non-Indigenous adults to Aboriginal and Torres Strait Islander adults.

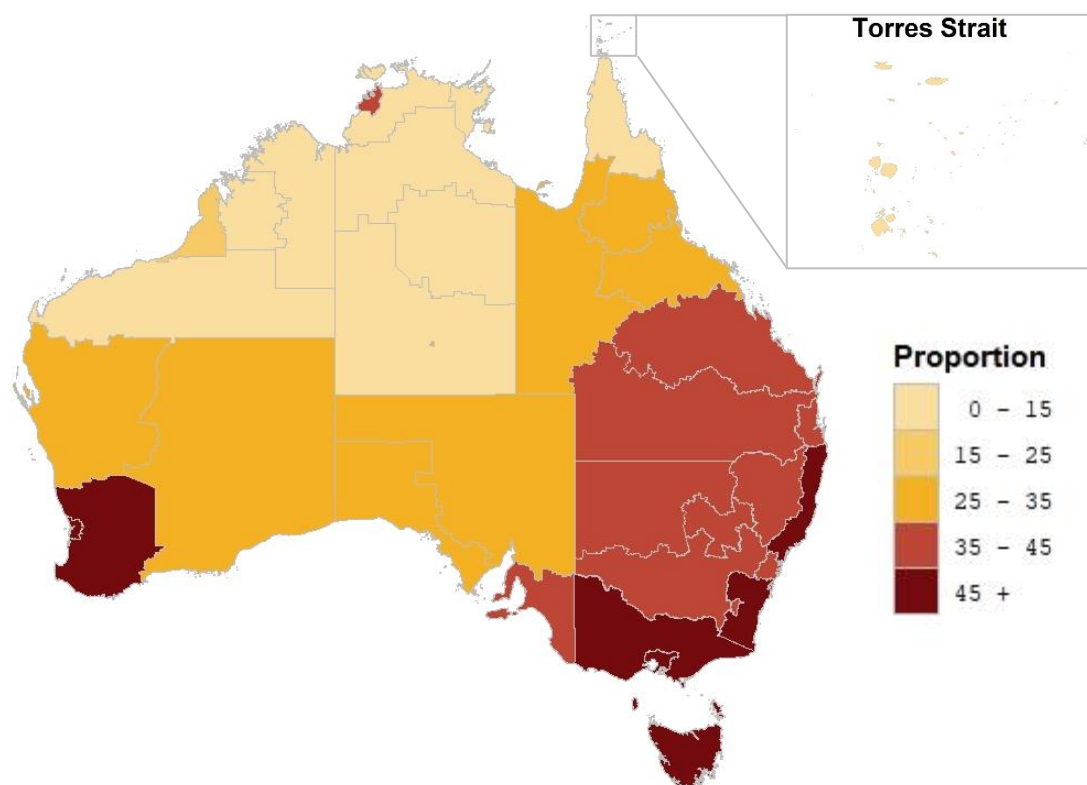

Source: ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2018-19; ABS (unpublished) National Health Survey, 2017-18; tables 9A.3.1-2.

Consistent with the results above, about one in three Aboriginal and Torres Strait Islander households own or are purchasing a home, and this proportion has not changed over time

The proportion of Aboriginal and Torres Strait Islander households owning or purchasing a home remains unchanged from 2008 (at around 32 per cent in both 2008 and 2018-19) (tables 9A.3.10–13). A higher proportion of households owned or were purchasing a home with a mortgage (23 per cent) than without a mortgage (10 per cent) in 2018-19 (table 9A.3.14) — similar to the proportions recorded in 2012-13 (tables 9A.3.16).

Home ownership varied across Indigenous regions. Available data for 2016 show that Aboriginal and Torres Strait Islander people were more like to own or be purchasing their home if they lived in more populated areas (figure 9.3.2).

Figure 9.3.2 Proportion of Aboriginal and Torres Strait Islander households that owned or were purchasing their home by Indigenous region in 2016^a

^a See table 9A.3.18 for detailed definitions, footnotes and caveats.

Source: ABS (unpublished) Census of Population and Housing 2016 (TableBuilder); table 9A.3.18.

What are the barriers preventing Aboriginal and Torres Strait Islander people from owning their own homes, and how can they be removed?

The low rate of home ownership for Aboriginal and Torres Strait Islander people is likely a result of both historic policies (and their ongoing intergenerational effects) and current barriers to home ownership.

The intergenerational effects of historical government policies (see chapter 1 and section 4.10 *Household and individual income*) continue to impact younger Aboriginal and Torres Strait Islander people's home ownership rates (PMC 2018). For example, Aboriginal and Torres Strait Islander people have only had unrestricted rights to own property since after the 1967 referendum (Reconciliation Australia 2018). International research has found that people are three times as likely to own a property if their parents were homeowners (Wood and Clarke 2018). With potentially only three generations of Aboriginal and Torres Strait Islander people able to have owned property, the proportion of young Aboriginal and

Torres Strait Islander people owning property is likely to remain lower than for non-Indigenous people.

In addition, and related to these intergenerational effects, Aboriginal and Torres Strait Islander people in both non-remote and remote areas face a range of barriers to owning a home — including lower incomes (see section 4.10 *Household and individual income*), lower employment rates (see section 4.7 *Employment*), lack of savings for a deposit, or insufficient credit history (AIHW 2019).

Furthermore, land tenure arrangements can be an additional barrier to home ownership, which may explain the lower home ownership rates in remote areas (Brackertz, Davison and Wilkinson 2017; FaHCSIA 2013). In particular, native title does not grant freehold rights, meaning that building homes on native title land is generally not allowed (Maurus 2017). However, extinguishing native title to transfer to another tenure that would allow home ownership may not be desirable to the traditional owners, as it can be seen as dissolving the cultural integrity of the community and allowing the alienation of traditional lands (Maurus 2017).

Declining household affordability and difficulties accessing finance also make it more difficult for Aboriginal and Torres Strait Islander people to become home owners (Anderson et al. 2018). House prices have risen more rapidly than incomes since the mid-1990s for all Australians, and this has resulted in a decline in housing affordability (Daley and Coates 2018). There is evidence to suggest this affordability barrier is compounded for Aboriginal and Torres Strait Islander people who continue to be subjected to interpersonal and institutional racism as a barrier to accessing finance and home ownership (Moodie, Maxwell and Rudolph 2019; Shelter WA and Aboriginal Legal Services of Western Australia 2010) — and who, on average, have lower incomes and less savings compared to non-Indigenous people (section 4.10 *Household and individual income*; AIHW 2019).

A range of policies are currently in place to overcome these barriers and increase home ownership among Aboriginal and Torres Strait Islander people (for those wanting ownership). These policies include home loan schemes, rent to buy schemes, shared equity schemes and long-term leases (Brackertz, Davison and Wilkinson 2017).

But the barriers to home ownership do not affect everyone equally. It is important to target programs to where they are most needed and can make the biggest impact. For example, an evaluation of a home loan scheme for Aboriginal and Torres Strait Islander people could not verify that the financial assistance was going to people unable to access finance, rather than to those who could (ANAO 2015). In addition, home ownership, rent and mortgages are concepts that may not have the same meaning for some Aboriginal and Torres Strait Islander people as they do for non-Indigenous people (Crabtree 2016).

Understanding households' tenure preferences could assist in identifying areas where barriers are significant or where assistance could be better targeted. For example, a survey of Alice Springs town camp residents found that 38 per cent expressed a desire to own their homes, 35 per cent preferred to rent and 26 per cent opposed the idea of owning a home

(Crabtree et al. 2018). If the home ownership rate was significantly lower than 38 per cent assistance could be targeted towards identifying addressing the main barriers to home ownership.

Evaluations of the different policy options would improve our understanding of the policies' effectiveness at increasing homeownership. Aboriginal and Torres Strait Islander priorities and perspectives need to be central to any evaluation and the subsequent lessons learned (Crabtree 2016; PC 2020).

Future directions in data

Data on Aboriginal and Torres Strait Islander people's views and preferences on home ownership are currently only collected through small-scale research. Collecting this data would assist with public policy decisions regarding home ownership for Aboriginal and Torres Strait Islander people.

9.4 Income support²²

Box 9.4.1 Key messages

- A person's wellbeing is influenced by many factors, but having an adequate income remains an essential component of individual and household wellbeing. Income support aims to support people who cannot, or cannot fully, support themselves.
- In 2018-19, government pensions and allowances (45 per cent) and employee income (44 per cent) were jointly the main source of personal cash income for Aboriginal and Torres Strait Islander people aged 18–64 years. A lack of comparable data has limited analysis of income sources over time.
- Aboriginal and Torres Strait Islander people continue to be overrepresented in the income support system across each of the selected income support payment types. This reflects their ongoing experience of structural barriers affecting their earning capacity and financial security.
- Furthermore, since the introduction of social security in Australia, Aboriginal and Torres Strait Islander people have been treated differently (and often detrimentally) through the income support system (including through income management and conditions on income support payments). For income support programs to be effective and equitable, the ability of Aboriginal and Torres Strait Islander people to meet and comply with the requirements needs to be considered when developing them.

Box 9.4.2 Measures of income support

There are two main measures for this indicator.

- *Personal cash income* is defined as the proportion of people aged 18–64 years by main source of personal cash income. The main data source is the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS)/National Aboriginal and Torres Strait Islander Health Survey (NATSIHS) with the most recent data available for 2018-19. Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/ General Social Survey (GSS)/ National Health Survey (NHS) with the most recent data for 2017-18.

Data on main source of personal cash income from the 2018-19 survey are not comparable with previous surveys for Aboriginal and Torres Strait Islander people, and data for non-Indigenous people for the current period are only available for non-remote areas (see 'Future directions in data' for more information).

- *People receiving income support payments* is defined as the proportion of people aged 15–64 years receiving income support payments by payment type. The main data source is Services Australia's administrative data, with the most recent data available for 2019. As individuals can receive multiple payment types, these data cannot be aggregated.

²² The Steering Committee notes its appreciation to Dr Heron Loban, Griffith University, who reviewed a draft of this section of the Report.

A person's wellbeing is influenced by many factors, but having an adequate income remains an essential component of individual and household wellbeing (AIHW 2019b). Income support aims to support people who cannot, or cannot fully, support themselves through other means, such as employment (AIHW 2019a). Income support may be provided to the aged, people with disability, carers, youth and students, families with children, the unemployed, and widows.

Government pensions and allowances and employee income are the main sources of personal cash income for Aboriginal and Torres Strait Islander people

In 2018-19, government pensions and allowances (45 per cent) and employee income (44 per cent) were the main sources of personal cash income for Aboriginal and Torres Strait Islander people aged 18–64 years (table 9A.4.1).

As remoteness increases, these proportions increase for government pensions and allowances and decrease for employee income. The proportion of Aboriginal and Torres Strait Islander people whose main source of personal cash income was a government pension or allowance was 36 per cent in major cities, rising to 57 per cent in outer regional and 48 per cent in very remote areas (table 9A.4.4). Conversely, the proportion whose main source was employee income was 53 per cent in major cities, falling to 32 per cent in very remote areas (table 9A.4.4).

Data for non-Indigenous people are only available for non-remote areas for the most recent reporting period. Across these areas (major cities and regional areas) in 2017–19, Aboriginal and Torres Strait Islander people received government pensions and allowances as their main source of income at 3.5 times the rate of non-Indigenous people (table 9A.4.4).

For all people in non-remote areas, the proportion whose main source of income was government pensions and allowances increased as remoteness increased, possibly reflecting the greater number of employment opportunities in less remote areas (AIHW 2019a). But the increase was larger for Aboriginal and Torres Strait Islander people (21 percentage points) than for non-Indigenous people (8 percentage points) (figure 9.4.1).

Data is also available for people receiving government cash pensions and allowances irrespective of whether it is their main source of personal cash income (tables 4A.9.5–9).

Figure 9.4.1 **Main sources of personal cash income, non-remote areas only, people aged 18–64 years, 2017–19^{a,b,c}**

^a Relative standard errors and 95 per cent confidence intervals should be considered when interpreting these data. ^b Bars do not sum to 100 per cent as some people registered no source of income or not stated. ^c See table 9A.4.4 for detailed definitions, footnotes and caveats.

Source: ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2018-19; ABS (unpublished) National Health Survey 2017-18; table 9A.4.4.

A higher proportion of Aboriginal and Torres Strait Islander people than non-Indigenous people receive income support, across all payment types

A higher proportion of Aboriginal and Torres Strait Islander people than non-Indigenous people receive income support. In 2019, Newstart Allowance was the most common income support payment received by Aboriginal and Torres Strait Islander people (going to 14 per cent of people aged 15–64 years), followed by the Disability Support Pension (DSP) (nine per cent) and the Parenting Payment Single (seven per cent). The DSP and Newstart Allowance were the most common income support payment received by non-Indigenous people (each being received by four per cent of people aged 15–64 years) (figure 9.4.2).

Proportions have remained relatively stable over the last decade with the exception of the increase in receipt of Newstart Allowance among Aboriginal and Torres Strait Islander people (by about three percentage points between 2012 and 2015²³) (figure 9.4.3).

²³ A similar but smaller percentage point increase was seen for non-Indigenous people (figure 9.4.3).

What are some of the structural barriers facing Aboriginal and Torres Strait Islander people that relate to income support payments?

Aboriginal and Torres Strait Islander people are more likely to face barriers affecting their earning capacity and financial security, which in turn contribute to their continued over-representation in the income support system. A person's capacity to earn an adequate income is influenced by many factors such as: availability of employment; level of education, training or skills; caring responsibilities; or limitations due to health status or disability (AIHW 2019a). As established in other sections of this report Aboriginal and Torres Strait Islander people face more barriers affecting their earning capacity (see sections 4.6 *Year 12 attainment*, 4.7 *Employment*, 4.8 *Post-secondary education*, 4.9 *Disability and chronic disease* and 4.10 *Household and individual income*). Relatively low levels of financial literacy also make it more difficult for Aboriginal and Torres Strait Islander people to achieve financial security (financial literacy is discussed in section 4.10 *Household and individual income*).

Furthermore, since the introduction of social security in Australia, Aboriginal and Torres Strait Islander people have been treated differently (and often detrimentally) through the income support system. There have been many periods in which Aboriginal and Torres Strait Islander people either did not have the same access to income support payments as non-Indigenous people, received support in a different way or had greater conditions placed on payments (Venn, Biddle and Sanders 2020). This has been true in recent times and is even true today. For example:

- income management arrangements²⁴ affect the way in which income support payments are delivered and how the money can be spent; these restrictions disproportionately affect Aboriginal and Torres Strait Islander people due to the trial sites selected (ANAO 2018). Income management was introduced in the NT in 2007 and has since been expanded to selected locations around Australia (Bray 2016; DSS 2015). Evaluations of income management in Australia have not found consistent benefits or positive effects (ANAO 2018; Bray et al. 2012, 2014; Hunt 2017)
- conditions placed on income support payments in the now ceased School Enrolment and Attendance Measure (SEAM)²⁵, introduced in 23 remote Aboriginal communities in the NT (Australian Government 2020). As with income management, the locations where it was introduced meant that the additional regulatory requirements to receive income support payments disproportionately affected Aboriginal and Torres Strait Islander people.

Aboriginal and Torres Strait Islander people continue to face barriers to meeting both access and compliance requirements for income support payments.

²⁴ Income management process controls the way in which people can spend a portion of the income they receive from income support and related government transfer payments (Bray 2016).

²⁵ SEAM aimed to 'increase the enrolment and regular school attendance of compulsory school-age children whose parents are receiving a schooling requirement payment, by placing conditions on the parents' receipt of such payments' (Australian Government 2020).

-
- Aboriginal and Torres Strait Islander people living with disability face more barriers to accessing the DSP than non-Indigenous people (Fitts and Soldatic 2018; Neave 2016). In 2015, the eligibility criteria and assessment process for the DSP changed requiring a greater amount of proof of disability (Fitts and Soldatic 2018). Obtaining this proof is often harder for Aboriginal and Torres Strait Islander people due to communication and language barriers, barriers to accessing specialist services and the cost of gathering the evidence relative to their income (Fitts and Soldatic 2018, 2019). For information on disability and chronic diseases see section 4.9.
 - Over time, people in remote employment services (through the Remote Jobs and Community Program and the Community Development Program (CDP)) were made subject to more stringent obligations (often above those required for non-remote programs²⁶) and there were inadequate adaptations for Aboriginal and Torres Strait Islander people's different cultural, social and economic circumstances (Fowkes 2016, 2019). This was in contrast to the original Community Development Employment Projects program which for many Aboriginal and Torres Strait Islander people was valued as an empowering program that improved both individual and community wellbeing (Jordan 2016). These changes have contributed to a substantial escalation in penalties for non-compliance which can result in a loss of income payments for up to eight weeks (Fowkes 2016, 2019).

For income support programs to be effective and equitable, the ability of Aboriginal and Torres Strait Islander people to meet and comply with the requirements needs to be considered in the application process (Fitts and Soldatic 2018; Neave 2016). This is particularly true for remote areas where these requirements can disproportionately affect Aboriginal and Torres Strait Islander people. For example, a study of remote Indigenous communities found insufficient digital infrastructure and low digital literacy impacted the ability of residents to apply for support and fulfil reporting requirements (O'Sullivan and Walker 2018). Furthermore, these requirements don't address the actual barriers to engagement in employment or education in these areas (Billings 2011). Alternatively, the requirements could be adapted for the social, cultural and economic differences of Aboriginal and Torres Strait Islander people (Klein 2016).

Future directions in data

Changes in the ABS's survey method for collecting income data in the 2018-19 NATSIHS have meant that data are not comparable for main source of personal income:

- between the 2018-19 survey and previous surveys for Aboriginal and Torres Strait Islander people, and so cannot be used to understand how income has changed over time

²⁶ For example, people aged 18-49 on the CDP are required to complete 1150 hours of work for the dole activities per year with activities held Monday to Friday. By contrast, Jobactive (the program for non-remote participants) requires participants to only 650 hours of activities per year with flexibility as to when the activities can be undertaken (Fowkes 2019).

-
- with the non-Indigenous personal income data collected through the 2017-18 NHS which did not survey in remote areas. This means that the gap between Aboriginal and Torres Strait Islander and non-Indigenous people cannot be ascertained, nor whether it has changed over time.

Data collection that allows analysis of income over time, and between Aboriginal and Torres Strait Islander people and non-Indigenous people, should be maintained.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) Non-Indigenous data for very remote areas are not available (they were not collected in surveys).

(c) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(d) The sample size in the NT was considered too small to produce reliable estimates for the NT in the National Health Survey 2004-05, but NT records in the survey have been attributed appropriately to national estimates.

na Not available.

TABLE 9A.1.3

Table 9A.1.3 Full time and part time employment, employed people (aged 15–64 years), by Indigenous status, by state and territory, by remoteness, 2001, 2006, 2011 and 2016 (a)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Australia (b)</i> | <i>Australia (b)</i> |
|--|------------------------------|------------|------------|-----------|-----------|------------|------------|-----------|----------------------|----------------------|
| | <i>Proportion (per cent)</i> | | | | | | | | | <i>Number</i> |

(b) Australia total includes Other Territories.

(c) Includes 'Aboriginal', 'Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

(d) Total employed also includes persons who worked zero hours or who did not state their hours worked.

(e) Full-time comprises employed persons who worked 35 or more hours.

(f) Part-time comprises employed persons who worked 1–34 hours.

(g) Also includes persons who did not state their Indigenous Status.

Note: 2016 Census data are sourced by the Productivity Commission from TableBuilder.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which are cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', 'Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

Note: 2016 Census data are sourced by the Productivity Commission from TableBuilder.

Source: ABS (unpublished) derived from the 2016 Census of Population and Housing.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which are cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', 'Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

Source: ABS (unpublished) derived from the 2011 Census of Population and Housing.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which are cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', 'Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

Source: ABS (unpublished) derived from the *2006 Census of Population and Housing*.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which are cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', 'Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

Source: ABS (unpublished) derived from the 2001 Census of Population and Housing.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) The 2006 ANZSIC has different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government Administration and Defence' = Public Administration and Safety; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.

(d) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(e) Excludes people in employment who did not adequately describe the industry of their employment.

np Not published. – Nil or rounded to zero.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) The 2006 ANZSIC has different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government Administration and Defence' = Public Administration and Safety; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.

(d) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(e) Excludes people in employment who did not adequately describe the industry of their employment.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) The 2006 ANZSIC had different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government administration and defence' = Public administration and defence; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.

(c) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(d) Excludes people in employment who did not adequately describe the industry of their employment.

| Proportion of land subject to determinations | % | 0.1 | 0.5 | 0.5 | 13.3 | – | – | – | 0.6 | .. | 4.6 |

(a) Areas are based on the geographic extent of the determination area as per the court's decision. Parts of these determinations may not be included on the National Native Title Register at this time. Where native title has been extinguished within a determination area and it has been possible to map these areas then they have been included in the calculations.

(b) Areas calculated using GDA2020 (EPSG 7844), prior to 2016 areas calculated using Australian Albers projection (EPSG 3577).

(c) Areas include islands adjacent to the mainland — figures sourced from Geoscience Australia (1993). (<http://www.ga.gov.au/scientific-topics/national-location-information/dimensions/area-of-australia-states-and-territories>).

.. Not applicable. – Nil or rounded to zero.

- (a) Areas are based on the geographic extent of the determination area as per the Court's decision. Parts of these determinations may not be included on the National Native Title Register at this time. Where native title has been determined not to exist within a determination area and it has been possible to map these areas then they have been included in the calculations.
- (b) Remoteness regions and areas sourced from ABS — Australian Statistical Geography Standard (ASGS): Volume 5 - Remoteness Structure 2016. Prior to 2016 Australian Statistical Geography Standard (ASGS): Volume 5 - Remoteness Structure 2011.
- (c) Australian total does not include offshore.
.. Not applicable. – Nil or rounded to zero.

(a) Areas are normally based on the geographic extent of the Indigenous Land Use Agreement (ILUA) area, however, where specific exclusions are indicated, these are normally mapped and not included in the area calculation. As more than one ILUA can cover the same area (this is specifically relevant where body corporate agreements are developed) the total area of land covered has also been calculated.

(b) Areas calculated using GDA2020, prior to 2016 areas calculated using Australian Albers projection (EPSG 3577).

(c) Australian total does not includes offshore.

(d) Areas include islands adjacent to the mainland — figures sourced from Geoscience Australia (1993).

na Not available. **..** Not applicable. **–** Nil or rounded to zero.

(a) Areas are normally based on the geographic extent of the Indigenous Land Use Agreement (ILUA) area, however, where specific exclusions are indicated, these are normally mapped and not included in the area calculation. As more than one ILUA can cover the same area (this is specifically relevant where body corporate agreements are developed) the total area of land covered has also been calculated.

(b) Remoteness regions and areas sourced from ABS — Australian Statistical Geography Standard (ASGS): Volume 5 - Remoteness Structure 2016. Prior to 2016 remoteness regions and areas sourced from ABS — Australian Statistical Geography Standard (ASGS): Volume 5 - Remoteness Structure 2011.

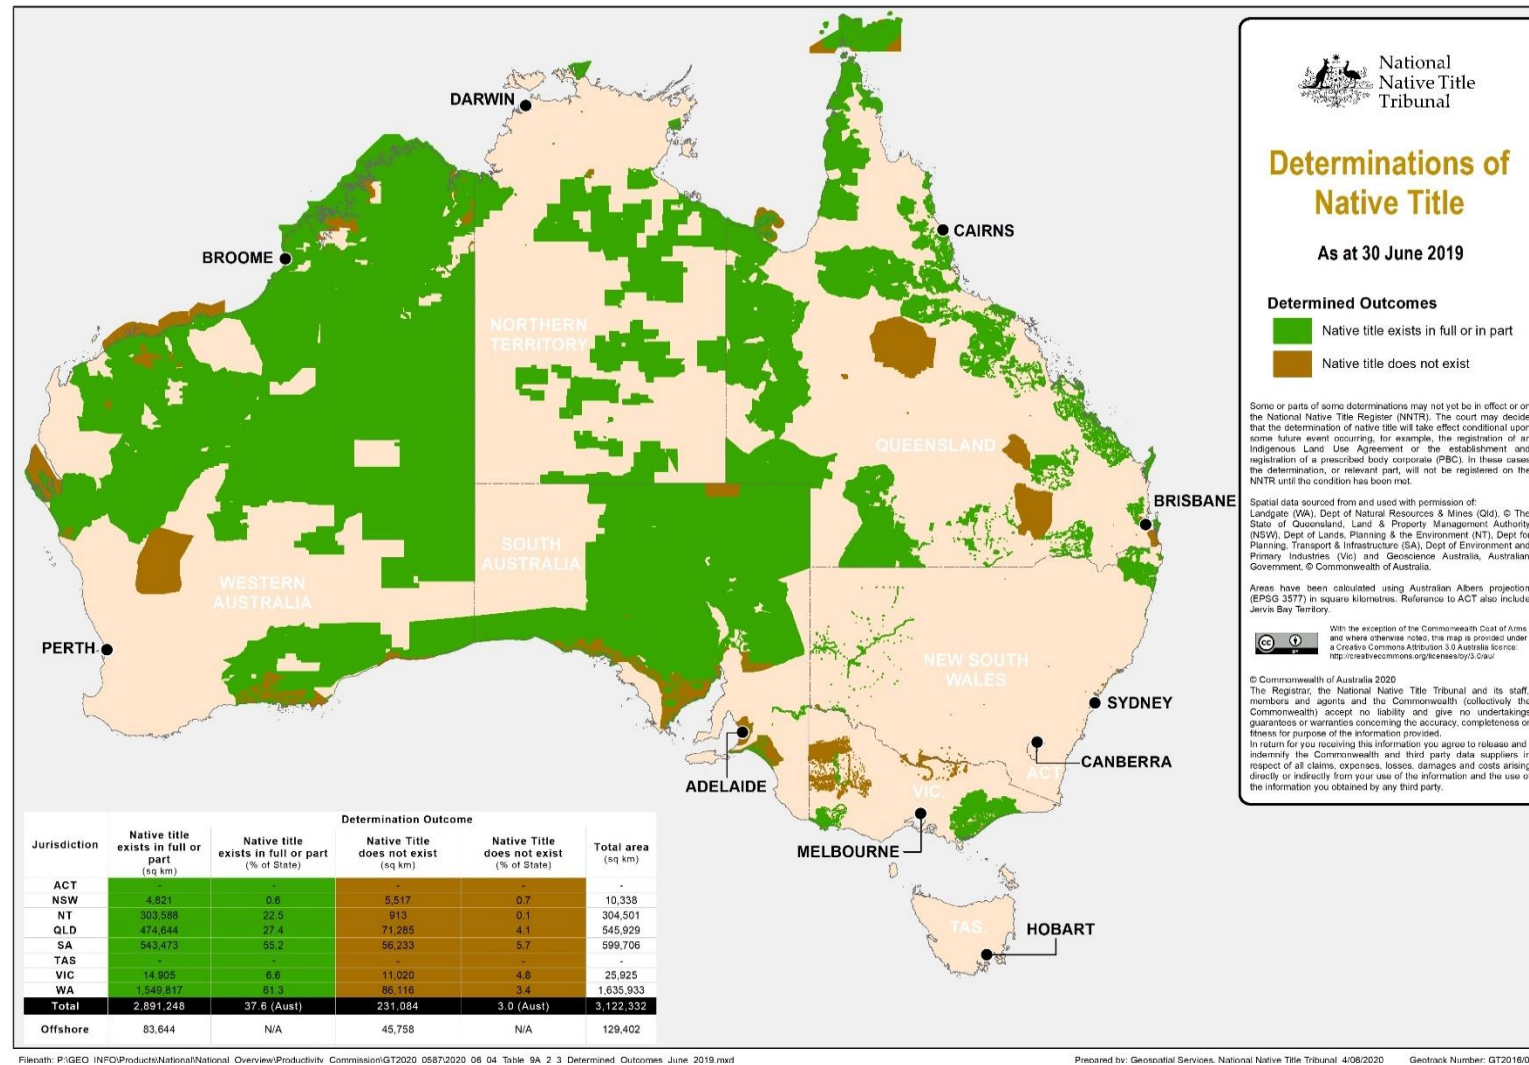

(c) Australian total does not include offshore.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Data are not age standardised.

(d) Includes employers and own account workers.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Includes persons in a shared equity scheme and those living in a household in which a mortgage is outstanding.

(d) Includes people aged 18 years or over who did not state the tenure type of the home they were living in that someone else in the household owned.

- (a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.
- (b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (c) Non-Indigenous data for remote and very remote areas of Australia are not available from the 2002 General Social Survey. Non-Indigenous data for very remote areas of Australia are not available from the 2004-05 National Health Survey; the 2011-13 Australian Health Survey or the 2014 General Social Survey, the 2014 General Social Survey or the 2017-18 National Health Survey.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

Table 9A.3.3 Aboriginal and Torres Strait Islander people (aged 18 years or over), living in homes someone in their household owned, by state and territory, 1994, 2002, 2004-05, 2008, 2012-13, 2014-15 and 2018-19 (a), (b)

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Includes persons in a shared equity scheme and those living in a household in which a mortgage is outstanding.

(d) Includes people aged 18 years or over who did not state the tenure type of the home they were living in that someone else in the household owned.

(a) Australia total includes Other Territories.

(b) Includes 'Aboriginal', 'Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

(c) Total for Australia also includes Migratory/Offshore and No Usual Address.

(d) Includes: owned with a mortgage and being purchased under a rent/buy scheme.

(e) Total includes all other tenure types, including where the tenure was not stated.

(f) Owned Outright/Owned with a mortgage and as part of a shared equity scheme as a proportion of all tenure types.

– Nil or rounded to zero. .. Not applicable.

Note: 2016 Census data are sourced by the Productivity Commission from TableBuilder.

Source: ABS (unpublished) derived from the 2016 Census of Population and Housing.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and the total.

(c) Balance of state estimates for the ACT are not separately available.

(d) Includes households that own their dwelling outright, have a mortgage outstanding on their dwelling or are in a shared equity scheme.

– Nil or rounded to zero.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) CDP as a principal source of income was not collected in Victoria or ACT.

(c) Proportions are calculated using unrounded estimates and in some cases will not match the proportion derived using the rounded numbers (to the nearest hundred) provided in the table.

(d) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(e) 2018-19 Aboriginal and Torres Strait Islander data is not comparable with any other time period.

(f) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(g) Comparable non-Indigenous survey data are not available for this time period.

(h) The Community Development Program (CDP) replaced the Community Development Employment Projects (CDEP) and the Remote Jobs and Communities Program on 1 July 2015.

(i) Includes 'Wages or salary' in the NATSIHS 2018-19 and 'Wages or salary' (including from own incorporated business) in the NHS 2017-18.

(j) For NATSIHS 2018-19 this includes Any government pension, benefit or allowance and also people who reported separately that the Community Development Program (CDP) was their main source of personal income as CDP participants receive income support payments (e.g. Newstart or Youth Allowance). For NHS 2017-18 this includes Government pension or allowance.

TABLE 9A.4.1

| Number | Proportion | RSE | 95 per cent CI | Number | Proportion | RSE | 95 per cent CI | |
| ' 000 | % | % | ± | ' 000 | % | % | ± | |

(k) For 2012-13 NATSIHS, Other cash income includes: Owners of unincorporated businesses, participants in CDEP programs, and any other source of regular income. For 2014 non-indigenous data, other cash income includes: profit or loss from own unincorporated business, profit or loss from rental property, dividends or interest, child Support or maintenance, superannuation or annuity, workers' compensation and any other source of regular income. For NATSIHS 2018-19 this excludes people who reported separately that CDP was their main source of income. For NHS 2017-18 it includes the sum of Own unincorporated business or share in a partnership, Rental investment property, Superannuation, an annuity or private pension, and Any other regular source.

(l) Includes persons whose main source of cash income was not defined, not stated or not known, and those who had no source of income.

na Not available. **..** Not applicable. **np** Not published.

Note: 2018-19 NATSIHS data have been sourced by the Productivity Commission from TableBuilder.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) CDP as a principal source of income was not collected in Victoria or ACT.

(c) Proportions are calculated using unrounded estimates and in some cases will not match the proportion derived using the rounded numbers (to the nearest hundred) provided in the table.

(d) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(e) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(f) Includes Wages or salary in the NATSIHS 2018-19 and Wages or salary (including from own incorporated business) in the NHS 2017-18.

TABLE 9A.4.2

Table 9A.4.2 **Main sources of personal cash income of people (aged 18–64 years), living in non-remote areas only, by Indigenous status, state and territory 2017–19 (a), (b), (c), (d)**

|--|--|-------------------|------------|-----------------------|-----------------------|-------------------|------------|-----------------------|------------------------|
| | <i>Number</i> | <i>Proportion</i> | <i>RSE</i> | <i>95 per cent CI</i> | <i>Number</i> | <i>Proportion</i> | <i>RSE</i> | <i>95 per cent CI</i> | |
| | <i>' 000</i> | <i>%</i> | <i>%</i> | <i>±</i> | <i>' 000</i> | <i>%</i> | <i>%</i> | <i>±</i> | <i>%</i> |

(g) For NATSIHS 2018-19 this includes Any government pension, benefit or allowance and also people who reported separately that the Community Development Program (CDP) was their main source of personal income as CDP participants receive income support payments (e.g. Newstart or Youth Allowance). For NHS 2017-18 this includes Government pension or allowance.

(h) For NHS 2017-18 it includes the sum of Own unincorporated business or share in a partnership, Rental investment property, Superannuation, an annuity or private pension, and Any other regular source.

(i) Includes persons whose main source of cash income was not defined, not stated or not known, and those who had no source of income.

na Not available. **..** Not applicable. **np** Not published.

(b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(c) Victoria and ACT do not have a Remote or Very Remote classification.

(d) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(e) 2018-19 Aboriginal and Torres Strait Islander data is not comparable with any other time period.

(f) The Community Development Program (CDP) replaced the Community Development Employment Projects (CDEP) and the Remote Jobs and Communities Program on 1 July 2015.

(g) Other cash income includes unincorporated business cash income and any other principal source of personal income.

(h) Includes persons whose main source of cash income was not stated or not known, and those who had no source of income.

– Nil or rounded to zero. .. Not applicable. **np** Not published.

- (a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.
- (b) Cells in this table have been randomly adjusted by the ABS to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.
- (c) 2018-19 Aboriginal and Torres Strait Islander data is not comparable with any other time period.

Table 9A.4.4 **Main sources of personal cash income of people (aged 18–64 years), by Indigenous status, by remoteness, 2002, 2004-05, 2007-08, 2011–13, 2014-15 and 2017–19 (a), (b)**

| | Aboriginal and Torres Strait Islander (c) | | | | Non-Indigenous | | | | Rate ratio (d) |
|-----|---|------------|-----|----------------|----------------|------------|-----|----------------|----------------|
| | Number | Proportion | RSE | 95 per cent CI | Number | Proportion | RSE | 95 per cent CI | |
| | ' 000 | % | % | ± | ' 000 | % | % | ± | |
| (d) | Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics. | | | | | | | | |
| (e) | Non-Indigenous data for very remote areas of Australia are not available. | | | | | | | | |
| (f) | The Community Development Program (CDP) replaced the Community Development Employment Projects (CDEP) and the Remote Jobs and Communities Program on 1 July 2015. | | | | | | | | |
| (g) | Includes Wages or salary in the NATSIHS 2018-19 and Wages or salary (including from own incorporated business) in the NHS 2017-18. | | | | | | | | |
| (h) | For NATSIHS 2018-19 this includes Any government pension, benefit or allowance and also people who reported separately that the Community Development Program (CDP) was their main source of personal income as CDP participants receive income support payments (e.g. Newstart or Youth Allowance). For NHS 2017-18 this includes Government pension or allowance. | | | | | | | | |
| (i) | For NATSIHS 2018-19 this excludes people who reported separately that CDP was their main source of income. For NHS 2017-18 it includes the sum of Own unincorporated business or share in a partnership, Rental investment property, Superannuation, an annuity or private pension, and Any other regular source. | | | | | | | | |
| (j) | For the Aboriginal and Torres Strait Islander population, income includes unincorporated business income, property (rental income) and other regular sources. | | | | | | | | |
| (k) | For the non-Indigenous population, survey data includes profit or loss from own unincorporated business, profit or loss from rental property, dividends or interest, child support or maintenance, superannuation or annuity, worker's compensation and other regular source. | | | | | | | | |
| (l) | Includes persons whose main source of cash income was not defined, not stated or not known, and those who had no source of income. | | | | | | | | |
| (m) | The National Aboriginal and Torres Strait Islander Health Survey does not provide data for this indicator for non-remote areas in Australia. | | | | | | | | |
| | .. Not applicable. na Not available. np Not published. | | | | | | | | |

Note: 2018-19 NATSIHS data have been sourced by the Productivity Commission from TableBuilder.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) The number and proportion of people in receipt of income support, according to their Indigenous status, sex and State/Territory.

(c) The data in this table is from 'sources of personal income' and not 'main source of personal income'.

(d) 2018-19 Aboriginal and Torres Strait Islander data is not comparable with any other time period.

(e) Comparable non-Indigenous survey data are not available for this time period.

(f) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

.. Not applicable. **na** Not available. **np** Not published.

Note: 2018-19 NATSIHS data have been sourced by the Productivity Commission from TableBuilder.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) The number and proportion of people in receipt of income support, according to their Indigenous status, sex and State/Territory.

(c) The data in this table is from 'sources of personal income' and not 'main source of personal income.'

(d) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

.. Not applicable. **na** Not available. **np** Not published.

Note: 2018-19 NATSIHS and 2017-18 NHS data have been sourced by the Productivity Commission from TableBuilder.

- (a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.
- (b) The number and proportion of people aged 18-64 years in receipt of income support, according to their Indigenous status, sex, and remoteness area. For NATSIHS 2018-19 this includes any government pension, benefit or allowance and also people who reported separately that the Community Development Program (CDP) was their main source of personal income as CDP participants receive income support payments (e.g. New start or Youth Allowance). For NHS 2017-18 this includes Government pension, benefit or allowance.
- (c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).
- (d) 2018-19 Aboriginal and Torres Strait Islander data is not comparable with any other time period.
- (e) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

TABLE 9A.4.8

(b) The number and proportion of people in receipt of income support, according to their Indigenous status, sex and age group.

(c) 2018-19 Aboriginal and Torres Strait Islander data is not comparable with any other time period.

(d) Due to comparability issues, NHS 2017-18 Non-Indigenous personal income data relates to non-remote areas only and therefore has not been included.

(e) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

.. Not applicable. **na** Not available. **np** Not published.

Note: 2018-19 NATSIHS data have been sourced by the Productivity Commission from TableBuilder.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) The number and proportion of people aged 18 years or over in receipt of income support, according to their Indigenous status, sex and age group. For NATSIHS 2018-19 this includes Any government pension, benefit or allowance and also people who reported separately that the Community Development Program (CDP) was their main source of personal income as CDP participants receive income support payments (e.g. Newstart or Youth Allowance). For NHS 2017-18 this includes Government pension, benefit or allowance.

(c) Aboriginal and Torres Strait Islander to non-Indigenous rate ratios have been calculated by dividing the proportion of Aboriginal and Torres Strait Islander persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

... Not applicable. **na** Not available. **np** Not published.

Note: 2018-19 NATSIHS and 2017-18 NHS data have been sourced by the Productivity Commission from TableBuilder.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0).

(c) In 2012-13, this indicator is only available for Remote areas in Australia. Refer to Table 9A.4.11.

(d) 2018-19 Aboriginal and Torres Strait Islander data is not comparable with any other time period.

(e) The Community Development Program (CDP) replaced the Community Development Employment Projects (CDEP) and the Remote Jobs and Communities Program on 1 July 2015.

(f) Includes unincorporated business cash income, CDP and any other regular income source for household.

(g) Includes source of cash income not stated or not known.

(h) Sum of components may be greater than total as households may have reported more than one source of income.

.. Not applicable. **na** Not available. **np** Not published.

(a) Proportions/Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Proportions/Estimates with an RSE greater than 50 per cent (or where the RSE is reported with an 'np') are considered too unreliable for general use.

(b) The 2012-13 National Aboriginal and Torres Strait Islander Health Survey does not provide data for CDEP participation for non-remote areas in Australia.

(c) Other cash income includes unincorporated business cash income, CDP, and any other regular source of income for the household.

(d) 2018-19 Aboriginal and Torres Strait Islander data is not comparable with any other time period.

(e) The Community Development Program (CDP) replaced the Community Development Employment Projects (CDEP) and the Remote Jobs and Communities Program on 1 July 2015.

(f) Includes source of cash income not stated or not known.

(g) Sum of components may be greater than total as households may have reported more than one source of income.

– Nil or rounded to zero. .. Not applicable. np Not published.

Note: 2018-19 NATSIHS data have been sourced by the Productivity Commission from TableBuilder.

(a) Recipients for whom Indigenous status was unknown have been reported where data is available. For all other payments, recipients of unknown status are included as non-Indigenous.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June in the relevant year.

(c) Proportions are of the Aboriginal and Torres Strait Islander/non-Indigenous/total male, female or persons population aged 15-64 years.

(d) Metadata for the data presented in this table are provided at table 9A.4.18.

(e) Recipients of age pension, disability suport pension, wife pension (age), wife pension (DSP), carer payment and special benefit payments whose Indigenous status was unknown are not included in 2010 and 2011. In 2009 and prior to 2009, the non-Indigenous category includes recipients whose Indigenous status was unknown.

(f) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as Aboriginal and Torres Strait Islander Australian. These data may therefore represent an undercount.

– Nil or rounded to zero. **na** Not available. **..** Not applicable. **np** Not published.

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June and July in the relevant year.

(c) Metadata for the data presented in this table are provided at table 9A.4.18.

(d) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as Aboriginal and Torres Strait Islander Australian. These data may therefore represent an undercount.

– Nil or rounded to zero. **na** Not available. **..** Not applicable. **np** Not published.

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June and July in the relevant year.

(c) The Australian total includes population where State/Territory was unknown and where an individual resides internationally.

(d) Proportions are of the Aboriginal and Torres Strait Islander/non-Indigenous/total male, female or persons population aged 15-64 years.

(e) Metadata for the data presented in this table are provided at table 9A.4.18.

Table 9A.4.15 **Non-Indigenous people (aged 15–64 years) receiving income support payments, by state and territory, by type of payment, 2003 to 2019 (a), (b), (c), (d), (e), (f)**

| (f) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as Aboriginal and Torres Strait Islander Australian. These data may therefore represent an undercount. | | | | | | | | | | | | | | | | | | |

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June in the relevant year.

(c) Metadata for the data presented in this table are provided at table 9A.4.18.

(d) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as Aboriginal and Torres Strait Islander Australian. These data may therefore represent an undercount.

|-------------------------------|---|
| Confidentiality Provision | All cells that have a value of less than 20, including zero, have been changed to display not published (np). This rule has been employed for privacy reasons. Where the total fields are included these will only have a value when it does not make it possible to work out the value of any "<20" fields. Not published (np) will be inserted in cells when it may be possible to estimate customer numbers. This will prevent information from being broken down or manipulated to the degree that individuals may be identified, and to cover the legal requirement to protect an individuals privacy. |
| Point in Time | All data is point in time data. Depending on the particular payment type, data are reported at various points in time across June and July of the particular year. |
| Data Source | The source of the data can be found by the following example below: Centrelink Populations 2003 Qtr 3 (05-09-03) Ver-01 Table 1 Postcode by Language of Birth for Customers |
| Age Pension | Age Pension is a support payment for people who have reached the qualifying age. From 1 July 2013, the qualifying age for both men and women is 65 years. From 1 July 2017 the Age Pension qualifying age will progressively increase from 65 years to 67 years, reaching 67 years in 2023. This affects both men and women born on or after 1 July 1952. |
| Austudy | Income support payment for customers aged 25 years or more and studying or undertaking an Australian Apprenticeship full-time. Customers must be aged 25 or over to qualify. |
| Carer Payment | Is an income support payment for people who are unable to support themselves through participation in the workforce while caring for someone with a disability, severe medical condition or who is frail aged. |
| Disability Support Pension | Is an income support payment for customers who have a physical, intellectual or psychiatric impairment that prevents them from working. Customers must be aged 16 or over to qualify. |
| Newstart Allowance | Is an income support payment for customers who are looking for work and allows them to participate in activities designed to increase their chances of finding work. Customers must be aged 22 to 64 to qualify. |
| Newstart Mature Age Allowance | From 20 October 2003 Newstart Mature Age Allowance was closed to new claimants. The payment ceased in October 2008. |
| Parenting Payment | Is an income support payment for customers who are primary carers of young children. |
| Partner Allowance | Is an income support payment is for customers who face barriers to finding work because they have had limited participation in the workforce and their partner is getting income support. Partner allowance was closed to new claimants on 20 October 2003. |
| Sickness Allowance | Is an income support payment for customers who are employed and who are temporarily unable to work due to a medical condition. Customers must be aged 21 to 64 years to qualify. |
| Special Benefit | Is an income support payment for customers who are in severe financial need due to circumstances beyond their control. |

Table 9A.4.18 Metadata for Centrelink income support payments

| | |
|-------------------|--|
| Widow Allowance | Income support payment for women who were born on or before 1 July 1955 and have become widowed, divorced or separated later in life and have no recent workforce experience. |
| Widow B Pension | Income support payment to ensure customers have an adequate level of income if they are an older widow who does not qualify for parenting payment, have limited means, and have lost the financial support of their partner. There have been no new grants of Widow B pension since 20 March 1997. |
| Wife Pension | Income support payment for the female partner of a Disability Support Pensioner or Age Pensioner. There have been no new grants of Wife Pension since 1 July 1995. |
| Youth Allowance | Is an income support payment for young people who are studying, undertaking training or an Australian Apprenticeship, looking for work or sick. Customers must be aged 15 to 24 to qualify. |
| Indigenous status | <p><u>Indigenous:</u> Customer Identified as being Indigenous Australian. This includes if the customer has identified himself or herself as being of Aboriginal, Torres Strait Islander or South Sea Islander origin. Please note that Centrelink officially defines Indigenous Australians as being of Aboriginal and/or Torres Strait Islander descent. Includes the following categories: Aboriginal; Aboriginal & Torres Strait & South Sea Islander; Aboriginal & South Sea Islander; Both Aboriginal & Torres Strait Islander; Torres Strait Islander; Torres Strait Islander & South Sea Islander.</p> <p><u>Non-Indigenous:</u> Customer not Identified as being Indigenous Australian. Please note that it is optional for customers to identify as Indigenous so this limitation should be considered in any application or use of this information. This data may represent an undercount. Includes the following categories: not Aboriginal/Torres Strait but is South Sea Islander; not Aboriginal/Torres Strait/South Sea Islander; South Sea Islander; does not wish to declare if they are or are not Indigenous.</p> |

10 Home environment

Strategic areas for action

Environmental conditions in the home are key to the wellbeing of Aboriginal and Torres Strait Islander people. Environmental health relates to physical, chemical and biological factors external to a person which potentially affect their health (WHO 2020). Better environmental health can have positive outcomes for Aboriginal and Torres Strait Islander people, and is especially beneficial for children’s physical and emotional wellbeing.

The following indicators (included in this chapter) cover some factors that can affect the home environments and environmental health of Aboriginal and Torres Strait Islander people.

- Overcrowding in housing (section 10.1) — reducing overcrowding is associated with positive effects on health, family relationships and children’s education.
- Rates of disease associated with poor environmental health outcomes (section 10.2) — improvements in environmental health can help reduce the spread of diseases that are linked to environmental causes.
- Access to clean water and functional sewerage and electricity services (section 10.3) — clean water and functional sewerage and electricity services, and housing of an acceptable standard, enable practices that lead to good health.

The home environment can influence outcomes in several headline indicators, including:

- life expectancy (section 4.1)
- young child mortality (section 4.2)
- disability and chronic disease (section 4.9)
- family and community violence (section 4.12).

Conversely, other headline indicators can directly influence the home environment:

-
- employment (section 4.7)
 - household and individual income (section 4.10).

Outcomes in the home environment area can influence, or be influenced by, outcomes in other strategic areas:

- early child development (chapter 6)
- education and training (chapter 7)
- healthy lives (chapter 8)
- economic participation (chapter 9).

Attachment tables for this chapter are identified in references throughout this chapter by an ‘A’ suffix (for example, ‘table 10A.1.1’). These tables can be found on the web page (<http://www.pc.gov.au/oid2020>).

10.1 Overcrowding in housing¹

Box 10.1.1 Key messages

- Safe and secure housing is essential for people's wellbeing. Overcrowded housing affects health, education and social outcomes, including by jeopardising personal safety and security.
- However, there are cultural and social factors that influence the way housing is used by different Aboriginal and Torres Strait Islander people. On average, Aboriginal and Torres Strait Islander people have larger household sizes. This difference is likely to be motivated by a strong connection to family and a culture of sharing accommodation, and so some people might prefer living with more people in a household.
- Overcrowding in Australia is measured using the Canadian National Occupancy Standard, which will reflect the culture and preferences of some, but not all, Aboriginal and Torres Strait Islander people.
- Around one in five Aboriginal and Torres Strait Islander people in Australia live in overcrowded housing, although in remote areas it is around two in five.
- Overcrowding rates for Aboriginal and Torres Strait Islander people have decreased over time, and the gap to non-Indigenous people has narrowed.
- Nationally, overcrowding is most common for Aboriginal and Torres Strait Islander people in social housing. However, the rates of overcrowding by tenure type vary across jurisdictions.
- Some of the key housing practices that may contribute to reducing overcrowding for Aboriginal and Torres Strait Islander people include increasing the stock of available social housing, addressing housing affordability for other forms of housing tenures, and ensuring that social housing design is culturally appropriate and suited to the local Aboriginal and Torres Strait community needs by involving the local community in the design process.

Box 10.1.2 Measures of overcrowding in housing

There is one main measure for this indicator. *Overcrowding in housing* is defined as the proportion of Aboriginal and Torres Strait Islander people, of all ages, who live in overcrowded houses.

Overcrowding is calculated according to the Canadian National Occupancy Standard for housing appropriateness (more detail can be found in box 10.1.3).

The main data sources for this measure are the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS) and the National Aboriginal and Torres Strait Islander Health Survey (NATSIHS), with the most recent available data for 2018-19 (all jurisdictions and remoteness).

Supplementary data are also available from the ABS Census of Population and Housing, with the most recent data for 2016 (all jurisdictions by remoteness). Survey and Census data are not directly comparable. Supplementary information is also provided for Aboriginal and Torres Strait Islander people aged 15 years or over (for comparable time series back to 2002) and for overcrowding as a stressor.

Safe and secure housing is essential for people’s wellbeing. Overcrowded housing can have detrimental effects on health, education and social outcomes, including by jeopardising personal safety and security.

- Overcrowded housing is an environmental factor that contributes to higher rates of preventable and infectious diseases² (Hall et al. 2020; Harford-Mills, MacRae and Drew 2019; Lowell et al. 2018; The Royal Australian College of General Practitioners and NACCHO 2018) and can exacerbate the severity of illnesses and need for hospitalisation (Quilty et al. 2019).
- Overcrowding is associated with poor cognitive development and poorer reading test performance among elementary and middle school children (Brackertz 2016). Overcrowded housing is also linked to lower levels of school attendance and educational achievement (Lowell et al. 2018; Silburn et al. 2018; Wilson 2013).
- Overcrowding from visitors staying extended periods can occasionally lead to antisocial behaviour, which can result in higher levels of family violence (Moran et al. 2016), and sexual abuse against children can be due to opportunistic behaviour by additional adults in the house (Blagg et al. 2018).

For Aboriginal and Torres Strait Islander people, measured ‘overcrowding’ may occur for cultural and social reasons, and may not necessarily reduce wellbeing in all cases. The housing occupancy standard used for this report (box 10.1.3) will reflect the culture and preferences of some, but not all, Aboriginal and Torres Strait Islander people.³

Box 10.1.3 Housing occupancy standard

The Canadian National Occupancy Standard (CNOS) is sensitive to both household size and composition in determining housing requirements. The measure assesses the bedroom requirements of a household by specifying that:

- there should be no more than two persons per bedroom
- a household of one unattached individual may reasonably occupy a bed-sit (i.e. have no bedroom)
- couples and parents should have a separate bedroom
- children less than five years of age, of different sexes, may reasonably share a room
- children five years of age or over, of different sexes, should not share a bedroom

(continued next page)

¹ The Steering Committee notes its appreciation to the Expert Reference Panel on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the Report.

² Diseases such as childhood kidney disease, eye diseases, childhood hearing impairments, rheumatic fever and heart disease as well as psychological stress.

³ See ‘future directions in data’ for more information.

Box 10.1.3 (continued)

The Canadian National Occupancy Standard (CNOS) is sensitive to both household size and composition in determining housing requirements. The measure assesses the bedroom requirements of a household by specifying that:

- children less than 18 years of age and of the same sex may reasonably share a bedroom
- single household members aged 18 years or over should have a separate bedroom.

Households living in dwellings where this standard cannot be met are considered to be overcrowded.

Source: ABS (2016).

Aboriginal and Torres Strait Islander people have larger household sizes relative to non-Indigenous people (table 10A.1.7). These larger household sizes are likely to be caused by a strong connection to family and a culture of sharing resources, including accommodation (AIHW 2019; Moran et al. 2016). Research has found wellbeing benefits for Aboriginal and Torres Strait Islander people who live with a supportive network of people (The Royal Australian College of General Practitioners and NACCHO 2018).

Providing accommodation for visiting family or kin is one reason for these larger household sizes (Moran et al. 2016). A case study of four communities found that Aboriginal and Torres Strait Islander people living in overcrowded homes were typically providing accommodation for visiting kinfolk (Memmott, Birdsall-Jones and Greenop 2012). The main reasons for kin visiting included visiting family, accessing services and attending important ceremonies and events. Visits could be relatively short or could last for extended periods of time. Accommodation was also provided for kin while they waited for other housing options to become available. There are social and cultural benefits of accommodating visiting kin; however, long term overcrowding is associated with higher levels of stress for household members (Memmott et al. 2011; Memmott, Birdsall-Jones and Greenop 2012).

Overcrowded housing may also hide the prevalence of homelessness. For example, the authors of a small study in NSW stated that Aboriginal and Torres Strait Islander people ‘rely on their social networks to avoid primary homelessness⁴, often living with family and friends for extended periods of time’ (Anderson et al. 2016). The AIHW (2019) found that living in ‘severely crowded’ dwellings⁵ was the main type of homelessness experienced by Aboriginal and Torres Strait Islander peoples.

National data on overcrowding are based on the number of bedrooms in houses. However, it is important to acknowledge the importance of other inside and outside living areas for Aboriginal and Torres Strait Islander people. They often utilise backyards and living spaces in the house as sleeping spaces and for social, cultural and climatic reasons (Fien et al. 2011;

⁴ The ABS define primary homelessness where people do not have conventional accommodation, for example, they are living in the streets, in deserted buildings, improvised dwellings, under bridges, or in parks (ABS 2011)

⁵ Severely crowded dwellings are those that need four or more extra bedrooms.

Memcott, Birdsall-Jones and Greenop 2012; O'Rourke and Nash 2019). Houses with adequate indoor living spaces or backyards may temporarily ease the pressures of overcrowding.

Around one in five Aboriginal and Torres Strait Islander people live in overcrowded housing, although in remote areas it is around two in five

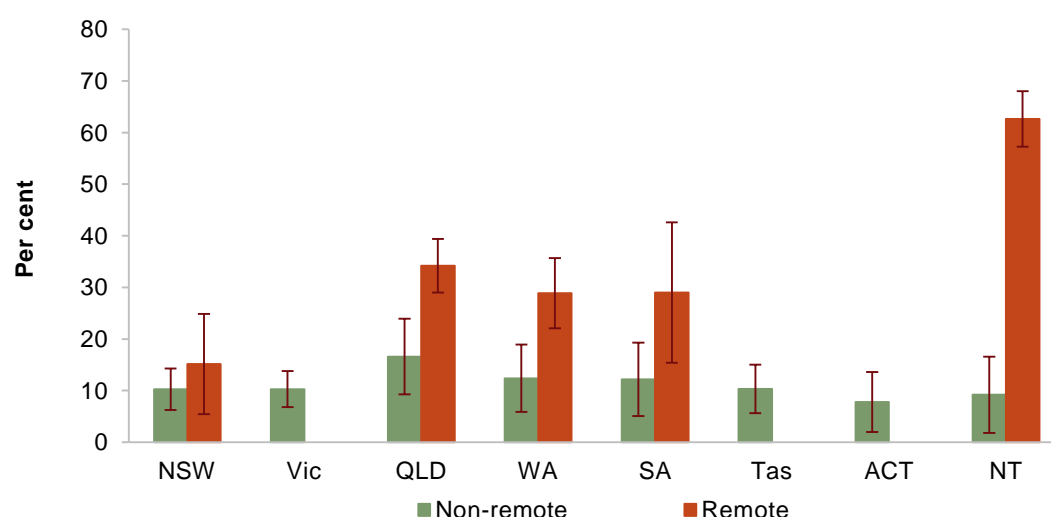

Around one in five Aboriginal and Torres Strait Islander people live in overcrowded housing. Nationally in 2018-19, the proportion of Aboriginal and Torres Strait Islander people of all ages living in overcrowded households was 18 per cent (table 10A.1.1).

Overcrowding increases with remoteness for Aboriginal and Torres Strait Islander people. In 2018-19, 13 per cent of Aboriginal and Torres Strait Islander people living in non-remote areas were in overcrowded houses; this increased to 42 per cent in remote areas (table 10A.1.2).

The rate of overcrowding varies considerably across and within jurisdictions; the Northern Territory has the greatest disparity of overcrowding for people living in remote areas compared with non-remote areas (figure 10.1.1).

Overcrowding rates are influenced by, among other things, government housing policies and infrastructure spending. Box 10.1.4 provides a case study of how the Northern Territory Government is working with traditional owners on Groote Eylandt to reduce overcrowding through appropriate housing design.

Figure 10.1.1 Rates of overcrowding for Aboriginal and Torres Strait Islander people by remoteness area, 2018-19^{a,b,c}

^a Data are not available for remote areas in Victoria, Tasmania or the ACT. ^b Error bars represent 95 per cent confidence intervals around each estimate. ^c See table 10A.1.10 for detailed definitions, footnotes and caveats.

Source: ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2018-19 and TableBuilder; table 10A.1.10.

Overcrowding rates for Aboriginal and Torres Strait Islander people are decreasing over time, and the gap with non-Indigenous people has narrowed

Overcrowding rates for Aboriginal and Torres Strait Islander people nationally have decreased over time. The decrease has been 10 percentage points (down from 28 per cent in 2008) (table 10A.1.1).

As the proportion of Aboriginal and Torres Strait Islander people living in overcrowded households has declined, so too has the gap with non-Indigenous people (based on Census data to enable comparisons). In 2006, the rate of Aboriginal and Torres Strait Islander people in overcrowded dwellings was almost 5 times the rate for non-Indigenous people; by 2016, this ratio had declined to almost 3:1. This decline was largely due to a decline in the proportion of Aboriginal and Torres Strait Islander people in overcrowded housing (by 5 percentage points) (table 10A.1.8).

The gap has also narrowed across all remoteness areas, but the difference remains considerably higher the more remote the area. In major cities in 2016, the rate of overcrowding for Aboriginal and Torres Strait Islander people was around twice the rate for non-Indigenous people; this discrepancy increased as remoteness increased, with a ratio in very remote areas of 11:1 (table 10A.1.8). However, caution should be used in interpreting these data, as the number of people with Indigenous status not recorded for overcrowding increases as remoteness decreases, which particularly affects results for major cities and inner regional areas (table 10A.1.8).

Overcrowding is most common for Aboriginal and Torres Strait Islander people in social housing

Overcrowding rates for Aboriginal and Torres Strait Islander people were highest in social housing.⁶ Of all Aboriginal and Torres Strait Islander people living in overcrowded housing in 2016, around 60 per cent lived in social housing, with most of the remainder fairly evenly split between houses owned (fully owned and being purchased) and private rental (table 10A.1.9).⁷

Around 40 per cent of all Aboriginal and Torres Strait Islander people living in social housing were overcrowded, compared to 15 per cent in privately rented houses and 10 per cent in houses owned (figure 10.1.2). However, the rates of overcrowding and prevalence by tenure type varied across jurisdictions.

6 'Social housing' includes both public and community housing. 'Community housing' incorporates both State owned and managed Indigenous housing and Indigenous community housing respectively.

7 Rates of overcrowding vary across jurisdictions and within and across tenure types. For more information see table 10A.1.9.

While higher levels of overcrowding also occur for non-Indigenous people in rented properties, the rate of overcrowding in rentals is much lower compared to the rates for Aboriginal and Torres Strait Islander people, and particularly for social housing (figure 10.1.2).

Overcrowding may reflect some people's preference to live with family and friends — but other people experience overcrowding out of necessity. It is not possible from the available Census data to ascertain what proportion of overcrowding is by choice or by necessity.

Figure 10.1.2 People living in overcrowded households, by Indigenous status and housing tenure, 2016^a

^a See table 10A.1.9 for detailed definitions, footnotes and caveats.

Source: ABS (unpublished) derived from the 2016 Census of Population and Housing; table 10A.1.9.

How to reduce overcrowding for Aboriginal and Torres Strait Islander people when it is causing them stress

Some of the key structural factors thought to contribute towards overcrowding in Aboriginal and Torres Strait Islander households include a lack of affordable and appropriate housing options (Anderson et al. 2016), insufficient housing stock where it is needed (Habibis 2013; Lowell et al. 2018), and a lack of affordable short term accommodation options for visitors (House of Representatives Standing Committee on Aboriginal and Torres Strait Islander Affairs 2001; Memmott, Birdsall-Jones and Greenop 2012). These reasons will differ depending on where people live, both across and within jurisdictions.

Some key housing practices that may contribute to reducing overcrowding for Aboriginal and Torres Strait Islander people include:

-
- increasing the stock of social housing (Biddle 2008), or addressing housing affordability for other forms of housing in areas with high rates of overcrowding
 - ensuring that social housing for Aboriginal and Torres Strait Islander people are governed by people with an understanding of their cultural needs, which is out of step with the shift from Indigenous Community Housing organisations to Community Housing organisations (Moran et al. 2016; PC 2020)
 - ensuring that social housing design is culturally appropriate and suited to local Aboriginal and Torres Strait community needs (for example, larger houses for larger families or short-term accommodation facilities for visitors). Involving the local community in the design process alongside governments is key.
 - Andersen et al (2016), in their qualitative study in Western Sydney, stated that the information gathered from local Aboriginal people about their housing situation ‘highlights the value of working with Aboriginal communities to identify problems, potential causal pathways and ultimately solutions to the sorts of complex problems with which they are intimately familiar’.
 - Box 10.1.4 provides an example of shared decision-making between Aboriginal and Torres Strait Islander people and the government to develop and manage culturally appropriate public housing.

Box 10.1.4 Transitioning to community housing in the Groote Archipelago

The Agreement between the Anindilyakwa Land Council and the NT Government aims to improve service delivery by transferring decision making power to the local community, with housing identified by the community as its highest priority.

In 2018, the NT Government and the Anindilyakwa Land Council (ALC)⁸ signed a nine-year Agreement (the Agreement) that transfers over time decision making power to the local Aboriginal people in the Groote Archipelago. Under the Agreement, the Aboriginal people of the Groote Archipelago will determine the service delivery models that work best for their community and region in priority transition areas determined by the ALC and agreed by the NT Government.

The most important priority transition area for Aboriginal people is the public housing system in the Groote Archipelago and replacing it with a community housing system that they manage and for which they take responsibility. At the time the Agreement was signed, it was estimated that just over half of the community dwellings in the area were overcrowded and three-quarters of the housing stock was in poor condition.

(continued next page)

⁸ The ALC represents all Traditional Owners across the Archipelago.

Box 10.1.4 (continued)

Implementation plans formalise shared decisions by clearly articulating strategies and associated actions, responsibilities, and the desired outcomes

Under the Agreement, an implementation plan was agreed by the NT Government, the ALC and the Anindilyakwa Housing Aboriginal Corporation (AHAC) to build a community-controlled housing system. The plan clearly articulates the strategies and associated actions, who is responsible for undertaking specific actions, and the desired outcomes.

Initially, the reasons for the poor standard of housing are identified, and actions to address them are agreed and articulated in the implementation plan. The reasons include overcrowding, low quality or malfunctioning health hardware, high costs because of remoteness, a lack of culturally and family responsive housing, and lack of community infrastructure based on substandard town planning and a lack of essential services infrastructure.

However, the implementation plan clearly states the ALC's position that it is the insufficient involvement of community members in controlling and taking responsibility in all aspects of the provision of their housing which is the principal cause of enduring poor outcomes

Once the reasons are identified, actions to address the issues are agreed. One significant action in the implementation plan is supporting AHAC. The AHAC was established to facilitate "decision-making by Anindilyakwa people in respect of the ownership, location, type and occupation of community housing across the Groote Archipelago and to take responsibility for tenancy management, repairs and maintenance and capital upgrades of this housing over time". The board of the AHAC is made up of Anindilyakwa Traditional Owners, community representatives and independent experts.

The implementation plan also envisages that over time the ownership and management of the existing and new houses owned by the NT Government and other providers will be progressively transferred to the AHAC. This is to enable the achievement of the desired outcome, to transition to a "single, sustainable, diverse and culturally appropriate community housing system across all towns and satellite communities in the Groote Archipelago that the Anindilyakwa people control and take responsibility for".

Future directions in data

A more complete picture of overcrowding could be provided if the following data issues were addressed:

- underreporting of persons in a household due to a fear of eviction (AIHW 2019; Greenop and Memmott 2016; Memmott et al. 2012), which may lead to a lower estimate of the prevalence of overcrowding (Anderson et al. 2016; Buergelt et al. 2017)
- responses for the number of persons in a household being capped at 10 or more people (in the NATSIHS), which limits understanding of the severity of overcrowding
- data not being collected on the number of people who reported overcrowding as a stressor in the last 12 months (2018-19 NATSIHS). These data would provide a clearer estimate

of what proportion of overcrowding is harmful for Aboriginal and Torres Strait Islander people.

The suitability of the model for estimating overcrowding for Aboriginal and Torres Strait Islander people has been questioned (Greenop and Memmott 2016; Pholeros 2010). The current model of overcrowding used by the ABS, based on the CNOS, is structured around the number of people per bedroom (box 10.1.3). Concepts more suitable for measuring overcrowding for Aboriginal and Torres Strait Islander people need to be investigated. One such concept is reporting on the number of people who felt stressed due to overcrowding, rather than just those living in overcrowded houses (Memmott et al. 2011; Pholeros and Phibbs 2012). A model reporting on people who were negatively affected by overcrowding would likely better account for cultural and individual preferences.

10.2 Rates of disease associated with poor environmental health⁹

Box 10.2.1 Key messages

- Good environmental health can help promote a better quality of life and prevent diseases such as scabies and rheumatic heart disease.
- Between 2010-11 and 2018-19, hospitalisation rates per 100 000 Aboriginal and Torres Strait Islander people increased for just over half of the measured environmental health diseases — with the highest rates for influenza and pneumonia, intestinal infectious diseases and bacterial diseases.
- While rates continue to be higher for Aboriginal and Torres Strait islander people in remote areas, the gap with Aboriginal and Torres Strait islander people in non-remote areas is narrowing. This narrowing of the gap is driven by decreasing rates in remote areas coupled with increasing rates in non-remote areas (a pattern observed for intestinal infectious diseases and influenza and pneumonia — for bacterial diseases, the rate increased across all areas).
- Hospitalisation rates for Aboriginal and Torres Strait Islander people for environmental health diseases are more than double those of non-Indigenous people, and the gap has widened. The largest gap was in rates of influenza and pneumonia; rates for non-Indigenous people have decreased in recent years, whereas rates for Aboriginal and Torres Strait Islander people have continued to increase.
- Aboriginal and Torres Strait Islander people were also one-and-a-half times more likely to die from environmental health diseases than non-Indigenous people, with rates in 2014–2018 essentially unchanged from the previous five years.
- Improving the quantity and quality of housing, ensuring the availability of functioning health hardware and increasing access to health care services are all strategies to address the risk factors for environmental health diseases for Aboriginal and Torres Strait Islander people.
- Effective strategies that address environmental risk factors require collaboration between governments, Aboriginal Community Controlled Health Organisations, service providers and communities.

⁹ The Steering Committee notes its appreciation to the Expert Reference Panel on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the Report.

Box 10.2.2 Measures of rates of disease associated with poor environmental health

There are two main measures for this indicator.

- *Hospitalisation rates for selected types of environmentally-based diseases* is defined as the number of people with a disease associated with poor environmental health divided by the population, and is presented as a rate per 100 000 people. Data for this measure are sourced from the AIHW National Hospital Morbidity Database, with the most recent data available for 2018-19 (all jurisdictions; age; remoteness).¹⁰

The hospitalisation data used in this section reflect more serious cases of disease but do not necessarily show the overall incidence of disease, as people may not always go to a hospital for treatment.

- *Death rates for diseases associated with poor environmental health* is defined as the number of deaths associated with poor environmental health divided by the population, and is presented as a rate per 100 000 people. Data for this measure are sourced from the ABS Causes of Death collection, with the most recent available data for 2014–2018 (NSW, Queensland, WA, SA and the NT; sex). Data are available in five-year groupings due to the volatility of small numbers in each year.

The World Health Organization classifies environmental health as:

...addressing the physical, chemical and biological factors external to a person that affect their health, and all the related factors impacting behaviours. It encompasses the assessment and control of those environmental factors that can potentially affect health. It is targeted towards preventing disease and creating health-supportive environments (WHO 2020).

Some of the key environmental factors affecting health are poor air quality, lack of safe drinking water and power, inadequate waste and sanitation facilities (section 10.3 *Access to clean water functional sewerage and electricity services*) and poor housing and overcrowding (section 10.1 *Overcrowding in housing*) (Clifford et al. 2015; Hall 2019; Ware 2013). A small scale study in the Kimberley, WA found that primary health care demand could be reduced by 20 per cent (25 per cent of presentations for Aboriginal children) by addressing environmental factors (McMullen, Eastwood and Ward 2016).

Globally, the rates of many environmental health diseases have decreased over time, mainly due to improvements in socioeconomic circumstances. But this has not been the case for some diseases — and particularly not for the least affluent populations, including Aboriginal and Torres Strait Islander people in Australia (Ralph and Carapetis 2013).

¹⁰ It should be noted that there is no attribution made to the environmental component for these disease types. Essentially, each of these disease types is treated as being 100 per cent attributable to environmental factors. See McMullen, Eastwood and Ward (2016) for more information.

Hospitalisation rates for many of the environmentally-based diseases are increasing for Aboriginal and Torres Strait Islander people

Hospitalisation rates for the selected environmentally-based diseases have increased by nearly 40 per cent for Aboriginal and Torres Strait Islander people since 2010-11 (table 10A.2.1).

The increase has been driven by increases in the hospitalisation rates for Aboriginal and Torres Strait Islander people for bacterial disease (from 385 to 799 per 100 000 population), intestinal infectious diseases (from 614 to 905 per 100 000 population), and influenza and pneumonia (from 723 to 924 per 100 000 population). In 2018-19, these three diseases also had the highest environmentally-based disease hospitalisation rates (table 10A.2.1).

Over this period, there were decreases in hospitalisations for some environmentally-based diseases, with the largest decrease in the rate of hospitalisations for scabies (from 208 to 184 per 100 000 population) (table 10A.2.1).

While hospitalisation rates for Aboriginal and Torres Strait Islander people increase in line with remoteness, this gap has narrowed

Hospitalisation rates in remote areas were 4.1 times the rates in major cities in 2010–2012, decreasing to a ratio of 2.6:1 in 2016–2018. This narrowing was due to a combination of increasing rates in major cities (and regional areas) and decreasing rates in remote areas (a pattern observed for intestinal infectious diseases and influenza and pneumonia — for bacterial diseases, the rate increased across all areas) (table 10A.2.4).

For Aboriginal and Torres Strait Islander people the rates are more than double those of non-Indigenous people, and the gap is widening...

In 2018-19, after adjusting for differences in population age structures, hospitalisation rates for diseases associated with poor environmental health were 2.5 times higher for Aboriginal and Torres Strait Islander people than for non-Indigenous people, up from a rate ratio of 2.0:1 in 2010-11 (table 10A.2.1). While the rate increased for both Aboriginal and Torres Strait Islander people and non-Indigenous people between 2010-11 and 2018-19, the increase was larger for Aboriginal and Torres Strait Islander people (1360 compared to 271 per 100 000 population, respectively, over this period).

The largest gap was in hospitalisation rates for influenza and pneumonia, where rates for non-Indigenous people have decreased in recent years whereas rates for Aboriginal and Torres Strait Islander people have continued to increase (figure 10.2.1).

Acute rheumatic fever and scabies are close to being unknown in the non-Indigenous population, but remain at relatively high rates for Aboriginal and Torres Strait Islander

people (table 10A.2.1). In particular, the age-adjusted hospitalisation rate for Aboriginal and Torres Strait Islander people in remote areas for scabies is almost 120 times the rate for non-Indigenous people in remote areas (table 10A.2.4), with over 1500 hospitalisations for Aboriginal and Torres Strait Islander people in 2018-19 (table 10A.2.1).

Figure 10.2.1 Age-standardised hospitalisation rates for selected diseases, 2010-2011 to 2018-19^a

^a See table 10A.2.1 for detailed definitions, footnotes and caveats.

Source: AIHW (unpublished) National Hospital Morbidity Database; table 10A.2.1.

...and Aboriginal and Torres Strait Islander people are more likely to die from environmentally-based diseases than non-Indigenous people

Death rates for diseases associated with poor environmental health are higher for Aboriginal and Torres Strait Islander people than for non-Indigenous people. After adjusting for population age structures, the death rate for Aboriginal and Torres Strait Islander people from these diseases was 1.6 times the rate for non-Indigenous people in 2014–2018 (table 10A.2.5). This ratio (and its associated rates) remains largely unchanged since 2009–2013.

Overcrowded housing, poor housing quality, insufficient community infrastructure and issues accessing health care services are all risk factors for environmental health diseases...

Overcrowded and poor quality housing (section 10.1 *Overcrowding in housing*), insufficient community infrastructure and issues accessing health care services (section 8.1 *Access to primary health care*) are risk factors associated with certain environmental health diseases that need to be addressed.

Overcrowding and poor housing quality (including poor health hardware¹¹) are linked to higher rates of environmental health diseases. Overcrowding can lead to deterioration in housing quality and breakdown in household facilities (such as toilets and washing machines) that are important for maintaining good hygiene (Ali, Foster and Hall 2018). Overcrowded and poor quality housing have been linked with higher rates of gastrointestinal, skin, ear, eye, and respiratory illnesses for Aboriginal and Torres Strait Islander people (Ali, Foster and Hall 2018; May, Bowen and Carapetis 2016). Furthermore, overcrowding can mean that infectious diseases, once present in a community, can circulate more rapidly (May, Bowen and Carapetis 2016).

Insufficient community infrastructure and services can result in higher exposure to environmental health diseases. For example, exposure to dust from unsealed roads and community spaces is a risk factor that leads to higher levels of trachoma and lung infections (Clifford et al. 2015; The Kirby Institute 2015). Similarly, insufficient community facilities and services — such as ablution blocks without running water, a lack of waste disposal facilities and limited animal control measures — are risk factors for environmental health diseases (Department of Health 2014; McDonald, Bailie and Michel 2013; Melody et al. 2016).

Lack of access to health care services for Aboriginal and Torres Strait Islander people also contributes to their higher rates of environmental health diseases. For example, streptococcal infections can lead to rheumatic heart disease if left untreated (May, Bowen and

¹¹ Health hardware includes safe electrical systems, toilets, showers, taps, kitchen cupboards and benches, stoves, ovens and fridges collectively (DoH 2013).

Carapetis 2016). Similarly, untreated infectious skin diseases can also lead to further health complications for Aboriginal and Torres Strait Islander people (Yeoh et al. 2017).

And lack of access to health care services can also affect access to vaccines important in preventing these diseases. Annual influenza vaccinations have been found to reduce the likelihood of hospitalisations due to influenza (Cheng et al. 2017). Stakeholders in an evaluation of the influenza immunisation program identified the following barriers to accessing the vaccine; difficulty getting transport to immunisation services, lack of culturally appropriate services, experiences of systematic discrimination and language barriers (National Centre for Immunisation Research and Surveillance 2018). However, unlike other vaccines on the National Immunisation Program, influenza vaccines do not attract notification payments for immunisation providers — so the relatively low coverage rates are likely to incorporate some level of under-reporting (National Centre for Immunisation Research and Surveillance 2018).

...and addressing these risk factors is a shared responsibility

Governments, communities, individuals and health practitioners all have a role to play in addressing risk factors for environmental health disparities. Many environmental health factors are modifiable, and reducing their negative impacts will likely reduce the cumulative effects on individuals (Clifford et al. 2015). Effective strategies to address environmental risk factors require collaboration between governments (including across government agencies), Aboriginal Community Controlled Health Organisations, service providers, communities and families (Department of Health 2013; Standen et al. 2020).

Governments have a central role in addressing the risk factors for poor environmental health that are prevalent for Aboriginal and Torres Strait Islander people. Improving the quantity and quality of housing, ensuring the availability of functioning health hardware and increasing access to health care services are all strategies to address these risk factors. Strategies to improve the quantity of appropriate housing to address overcrowding and improve access to health services are discussed in section 10.1 *Overcrowding in housing* and section 8.1 *Access to primary health care* respectively.

- For overcrowding: increasing the stock of social housing, addressing housing affordability issues, and ensuring that social housing for Aboriginal and Torres Strait Islander people is governed and designed by people with an understanding of their cultural needs.
- For access to health services: increasing access to Aboriginal Community Controlled Health Services, employing culturally competent health professionals, and improving access to telehealth services.

Enhancing the quality of housing is also important in improving environmental health and reducing the rates of associated diseases. This includes installing good quality health hardware and ensuring regular maintenance of housing and health hardware (Standen et al. 2020).

Once someone does become ill, it is important that early treatment is effective to reduce the severity and length of their illness. Research indicates that collaboration focused in areas like reducing and preventing antimicrobial resistance¹² and treating scabies, will be important to reduce the rates of environmental health diseases for Aboriginal and Torres Strait Islander people, particularly in remote communities (Bowen et al. 2019).

- Antimicrobial resistance exists where these medicines become ineffective and infections persist in the body, increasing the risk of spread to others (World Health Organization nd). Establishing stewardship for antimicrobial resistance is an important step in working with the community and health services providers to reduce and prevent resistance (Bowen et al. 2019).
- Collaboration between Aboriginal researchers and the University of Canberra have developed a treatment for scabies that utilises both Aboriginal bush medicine and Western medicine. The new treatment is easier to use than previous treatments and is hoped to encourage proper and consistent application which is vital in the treatment of scabies (Lazaroo 2019).

10.3 Access to clean water and functional sewerage and electricity services¹³

Box 10.3.1 Key messages

- The provision and maintenance of clean drinking water, sewerage treatment and electricity services is important for all people, but is mainly an issue for people living in remote areas. Poor provision and maintenance can affect these remote communities and the wellbeing of people living in them.
- Data have not been available since 2006 for the main measure for this section — access to common/community water, sewerage and electricity services — but more recent research indicates that the standard of water, sewerage and electricity services provided to Aboriginal and Torres Strait Islander people varies depending on where they live.
- In 2018-19, about one in five Aboriginal and Torres Strait Islander households lived in housing of an unacceptable standard, a figure that has remained unchanged since 2008.
- Most Aboriginal and Torres Strait Islander households reported working facilities to support their key household needs. Aboriginal and Torres Strait Islander households in non-remote areas reported better access to working household facilities across all categories than those in remote areas.
- But one in three Aboriginal and Torres Strait Islander households reported living in dwellings with major structural problems, an increase of seven percentage points since 2014-15.
- The quality of housing can be improved for Aboriginal and Torres Strait Islander households by investing in suitable design and construction, reducing overcrowding and ensuring regular repairs and maintenance.

Box 10.3.2 Measures of access to clean water, functional sewerage and electricity services

There are two main measures for this indicator.

- *Access to common/community water, sewerage and electricity services* is defined as the proportion of discrete Indigenous communities with access to common/community water, sewerage and electricity services. There is no current data source available for this measure (the most recent available data are for 2006 — tables 10A.3.9–14).
- *Aboriginal and Torres Strait Islander households living in housing of an acceptable standard* is defined as the proportion of households with four working facilities and not more than two major structural problems. The data source for this measure is the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS)/National Aboriginal and Torres Strait Islander Health Survey (NATSIHS), with the most recent data for 2018-19.

The data from the NATSIHS are 'self-reported' and are based on the respondent's view of their house and its functionality.

¹³ The Steering Committee notes its appreciation to the Expert Reference Panel on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the Report.

People in Australia have the right to an adequate standard of living; this includes access to clean water, functional sewerage and electricity services and an acceptable level of housing standards (Australian Government 2020; Australian Human Rights Commission 2013). These all support healthy living practices (AHMAC 2017) and help prevent diseases associated with poor environmental health.

The provision and maintenance of clean drinking water, sewerage treatment and electricity services is important for all people, but is mainly an issue for people living in remote areas. Poor provision and maintenance can affect the viability of remote communities and the wellbeing of people living in these communities (ABS 2003; Remote Services Reform Unit 2017). Contaminated water, inadequate sewerage and unreliable electricity are risk factors associated with poor health outcomes for all people (Clifford et al. 2015; Hall 2018; Smith et al. 2013). For more information see section 10.2 *Rates of disease associated with poor environmental health*.

Remote communities may have less access to safe drinking water, functional sewerage and electricity due to the high costs of supply and maintenance (Beal et al. 2019; Lormier 2012). Consequently, in remote areas, there is a greater reliance on local or individual household systems — like generators, septic tanks and drinking water sourced from bores and rainwater tanks — which are often less reliable than systems in highly populated areas (Jackson, Stewart and Beal 2019; Thorburn, O’Neil and Hunt 2019).

The standard of water, sewerage and electricity services provided to Aboriginal and Torres Strait Islander people varies depending on where they live

Many Aboriginal and Torres Strait Islander people live in non-remote areas where reliable drinking water, sewerage and electricity systems are readily available. The size of the networks and population in non-remote areas generally means that the services can be provided in a more cost-effective manner (Worthington and Higgs 2014).

However, there are some challenges in supplying these services to Aboriginal and Torres Strait Islander people living in remote communities. These challenges are due to the higher costs of infrastructure (for potable water, waste water, dry waste and electricity) and the relative sparseness of the population (Fien and Charlesworth 2012). Recent qualitative research has found that access to water and functional sewerage services is improving in some remote Aboriginal and Torres Strait Islander communities (Hall 2019). That said, overall, it appears that the quality of drinking water and adequacy of sewerage services is still a problem in some communities (Clifford et al. 2015). For example, an audit of essential services in Western Australia found that the drinking water provided to 80 per cent of Aboriginal and Torres Strait Islander communities was sometimes inadequate (Office of the Auditor General Western Australia 2015).

Some of these challenges for remote communities might have technological solutions. Advancements in technology are enabling more reliable access to electricity services, water

and wastewater management through local-level solutions. Renewable and hybrid energy systems are allowing select remote communities to lower their energy costs and have more secure and reliable supplies of electricity (Arceo, Biswas and John 2019; Australian Renewable Energy Agency 2020). Similarly, new technological advancements are making decentralised water solutions¹⁴ more viable for remote communities (Rajapakse et al. 2014).

Working with remote communities is likely to be an effective way for governments to determine and provide the solutions that best fit local needs. This collaboration and partnership in resource planning and management could benefit both government and the communities (Jackson et al. 2019).¹⁵ Unfortunately, there are limited evaluations of collaborations with remote Aboriginal and Torres Strait Islander communities in water, sewerage or electricity management to provide evidence of its benefits (Jackson et al. 2019). However, international research has found that collaboration with Indigenous populations in the management and governance of water and wastewater systems is important for long-term sustainability (Black and McBean 2017).

About one in five Aboriginal and Torres Strait Islander households lived in housing of an unacceptable standard, slightly higher than in 2008

The ‘acceptable standard’ measure is made up of two components: working household facilities, and major structural problems.

Nationally in 2018-19, 20 per cent of Aboriginal and Torres Strait Islander households reported living in houses classified as being of an unacceptable standard — slightly higher than in 2008 (17 per cent) (table 10A.3.1).

Most Aboriginal and Torres Strait Islander households had working facilities to support their key household needs...
