Foreword

The Review of Commonwealth/State Service Provision was established by heads of government in 1993 to develop objective and consistent data on the performance of services that are central to the wellbeing of Australians. This — the fifth *Report on Government Services* — is the product of the collective efforts of more than 80 agencies from nine governments.

The services covered by the Review — spanning education, health, justice, and community services — are all important in their own right. Together, they are an important determinant of Australians' living standards and represent a substantial share of government expenditure and GDP.

Getting policy right in these areas must therefore be a priority for all governments. But policy choices are rarely straightforward, or entirely predictable in their outcomes. Learning by doing and benefitting from the experience of other governments, are critical to developing more effective and efficient policy approaches. Facilitation of such inter-jurisdictional learning is a fundamental objective of the review. It requires relevant data that is of high quality and with a high degree of consistency or comparability across the States and Territories.

That is not easily or quickly done. The review's approach has accordingly been an iterative one, reporting the best available information (with caveats) and improving it over time. The very process of reporting imperfect or incomplete performance data has itself created opportunities and pressures for improvement. Feedback from those who use the data has been an important part of this.

Measuring the performance of each government service raises complex issues. The challenges have been found to be no less difficult for one service than another. The Review has sought to encourage greater understanding about measurement issues and ways of addressing them by releasing a range of relevant consultancies commissioned under its auspices. One example is the consultancy undertaken during 1999 on measuring client views about children's services.

It has been encouraging to see both the quality and coverage of reporting improve, and a better understanding of the necessary qualifications emerge. Great progress has been made in filling information gaps in some areas (for example, services for people with a disability, police, aged care, and housing) and in improving the

comparability of data in other areas (for example, emergency management, corrective services, and vocational education and training).

Progress is variable, however, and some significant gaps remain. For example, vocational education and training has useful national outcome data, but the same cannot yet be said for school education. The health sector has been able to provide more information this year in a number of areas — notably for hospitals and general practice — but much still needs to be done. The challenge of better understanding the links between services remains, but there is now some reporting on the link between hospitals in each jurisdiction and the delivery of aged care and general practice services. Better information on the ability of mainstream services to meet the needs of Indigenous Australians remains a priority and has the strong support of the Ministerial Council for Aboriginal and Torres Strait Islander Affairs.

Pulling together a Report of this scope in a timely way each year depends on the cooperation and support of many participants. The Review's twelve Working Groups constitute the 'engine room' of this project and the Steering Committee relies on the assistance and advice from the service agencies represented on these groups. In addition, the Review draws on a Secretariat from the Productivity Commission, and bodies such as the Australian Bureau of Statistics, the Australasian Fire Authorities Council, the Australian Institute of Health and Welfare, the Australian National Training Authority, the Convention of Ambulance Authorities, and the Secretariat of the Ministerial Council on Education, Employment, Training and Youth Affairs. The Working Groups and the Secretariat also work closely with a range of other groups involved in government performance measurement.

I would like to thank everyone involved for their continuing contributions to this important joint undertaking.

Gary Banks
Chairman

Contents

The Report is in three volumes: *Volume 1* contains Part A (introduction), Part B (Education) and Part C (Health); *Volume 2* contains Part D (Justice) and Part E (Emergency management); *Volume 3* contains Part F (Community Services), Part G (Housing) and Descriptive statistics appendix.

PART A INTRODUCTION	
1 The approach to performance measurement	1
1.1 Aims of the Review	1
1.2 Why measure comparative performance?	3
1.3 Purchaser and provider roles of government	7
1.4 Approach to reporting performance of services	7
1.5 Developments in performance measurement	16
1.6 Interpreting performance indicators	23
1.7 Related Review projects	28
1.8 Summary	29
PART B EDUCATION	
B Education preface	31

2	School education	45
2.1	Profile of school education	46
2.2	Policy developments in school education	58
2.3	Framework of performance indicators	62
2.4	Key performance indicator results	67
2.5	Future directions in performance reporting	92
2.6	Jurisdictions' comments	96
2A	School education — attachment	107
2A.1	All jurisdictions' data	108
2A.2	Single jurisdiction data	125
2A.3	Definitions	181
3	Vocational education and training	185
3.1	Profile of vocational education and training	186
3.2	Policy developments in vocational education and training	196
3.3	Framework of performance indicators	197
3.4	Key performance indicator results	198
3.5	Future directions in performance reporting	218
3.6	Jurisdictions' comments	219
3A	Vocational education and training — attachment	229
3A.1	All jurisdictions' data	229
3A.2	Information on sample data	245
3A.3	Definitions	248
 PART C HEALTH		
C	Health preface	253
4	Public hospitals	271
4.1	Profile of public hospital systems	271
4.2	Framework of performance indicators	277

Glossary

Descriptors	Statistics included in the Report that relate to the size of the service system, its client mix and the environment within which government services are delivered. They are provided to highlight and make more transparent the differences among jurisdictions.
Effectiveness	A reflection of how well the outputs of a service achieve the stated objectives of that service
Efficiency	A reflection of how well organisations use their resources to produce services
Unit costs	An indicator of efficiency, as used throughout this Report
Inputs	The resources (including land, labour and capital) used by a service area in providing the service
Process	The way in which a service is produced or delivered
Output	The service provided by a service area — for example, a treated case is an output of a public acute care hospital
Outcome	The impact of the service on the status of individuals or a group. A service provider can influence an outcome but external factors can also apply. A desirable outcome for a school, for example, would be to add to the ability of the students to participate in and interact with society throughout their lives. Similarly, a desirable outcome for a hospital would be to improve the health status of an individual receiving a hospital service.

Definitions of the indicators and terminology used in each chapter can be found in the relevant attachments.

Terms of reference

The Review, to be conducted by a joint Commonwealth/State and Territory Government working party, is to undertake the following:

- establish the collection and publication of data that will enable ongoing comparisons of the efficiency and effectiveness of Commonwealth and State Government services, including intra-government services. This will involve:
 - establishing performance indicators for different services which would assist comparisons of efficiency and effectiveness. The measures should, to the maximum extent possible, focus on the cost effectiveness of service delivery, as distinct from policy considerations that determine the quality and level of services; and
 - collecting and publishing data that are consistent with these measures. The Review should also address the procedures for the ongoing collection and publication of benchmark data; and
- compile and assess service provision reforms that have been implemented or are under consideration by Commonwealth and State Governments.

The Review will cover all major types of reform, including those involving the separation of policy development from service provision. Case studies of particular reforms could be provided where appropriate.

The Review will need to keep abreast of developments in other relevant reviews and working parties, including the Commonwealth/State Government working party (initiated by the Council of Australian Governments), investigating Commonwealth/State Government roles and responsibilities.
