<sup>a</sup> Estimates for jurisdictions with smaller populations need to be interpreted with caution because sample sizes were small. Caution should be used where there are small differences in the results, which are affected by sample and estimate size.

<sup>b</sup> The sample size for the Australian Bureau of Statistics survey does not permit separate reporting of profound and severe core activity restriction estim

<sup>c</sup> Data for the NT are not disaggregated because sample numbers were small. Data are for profound/severe core activity restriction, moderate core activity restriction and mild core activity restriction.

<sup>d</sup> Some people with this restriction do not have a core activity restriction.
