(a) Geographical data areas are based on the Rural, Remote and Metropolitan Area (RRMA) classification (DPIE and DSHS 1994). Data are classified according to an index of remoteness which rates each Statistical Local Area (SLA) based on the number and size of towns, the distance to major towns and urban centres, and population densities. It classifies areas into three groups:

- Metropolitan areas: comprise State/Territory capital cities (based on the ABS capital city Statistical Division) and urban centres with 100 000 people more, such as Geelong, Gold Coast, Townsville, Newcastle and Wollongong.
- Rural areas: have several large towns with between 10 000 and 99 999 people; and
- Remote areas: have few large towns with more than 5000 and there are great distances between centres and other SLAs.

– Nil or rounded to zero.

(a) At 30 June.

(b) Data for June 1985 to June 1988 were estimated.

(c) Places do not include those that have been 'approved' but are not yet operational.

(d) This table differs from table 12A.9, which refers to 'residents'.

(e) Multipurpose and flexible services included for 1999-2001.

(f) Government planning targets are based on providing 100 places per 1000 people aged 70 years and over. However, in recognition of poorer health among Indigenous communities, planning in some cases also takes account of the Indigenous population aged 50–69 years. This means that the provision ratio based on the population aged 70 years and over will appear high in areas with a high Indigenous population (such as the NT).
