### **Attachment tables**

Attachment tables are identified in references throughout this Indigenous Compendium by an 'A' suffix (for example, in this chapter, table 13A.3). As the data are directly sourced from the 2011 Report, the Compendium also notes where the original table, figure or text in the 2011 Report can be found. For example, where the Compendium refers to '2011 Report, p. 13.15' this is page 15 of chapter 13 of the 2011 Report, and '2011 Report, table 13A.2' is attachment table 2 of attachment 13A of the 2011 Report. A full list of attachment tables is provided at the end of this chapter, and the attachment tables are available from the Review website at [www.pc.gov.au/gsp](http://www.pc.gov.au/gsp).

The Aged care services chapter (chapter 13) in the *Report on Government Services 2011* (2011 Report) reports on the performance of Aged care services in each Australian State and Territory. Data are reported for Indigenous people for a subset of the performance indicators reported in that chapter — those data are compiled and presented here.

The aged care system comprises all services specifically designed to meet the care and support needs of frail older people living in Australia. This chapter focuses on government funded residential and community care for older people and services designed for the carers of older people. Some government expenditure on aged care

---

is not reported, but continual improvements are being made to the coverage and quality of the data.

Services for older people are provided on the basis of the frailty or functional disability of the recipients, as distinct from specific age criteria. Nevertheless, in the absence of more specific information, this Report uses people aged 70 years or over as a proxy for the likelihood of a person in the general population requiring these services. Particular groups (notably Indigenous people) can require various services at a younger age. For Indigenous people, those aged 50 years or over are used as a proxy for the likelihood of requiring aged care services. People aged 70 years or over plus Indigenous people aged 50–69 years are used as a proxy ‘target’ population for aged care services in this Report. The Australian Government uses this population as a ‘planning population’ to allocate aged care places under the *Aged Care Act 1997*. Nationally, the proportion of the population who are in this category was 9.8 per cent, although the proportion varies across jurisdictions (table 13A.1 and 2011 Report, table 13A.1).

Government funded aged care services covered in this chapter relate to the three levels of government (Australian, State and Territory, and some local) involved in service funding and delivery. The services covered include:

- assessment and information services, which are largely provided by the Aged Care Assessment Program (ACAP)
- residential care services, which provide permanent high level and low level care, and respite high/low level care
- community care services, including home-based care and assistance to help older people remain, or return to, living independently in the community as long as possible. These services include:
  - HACC program services
  - CACP
  - flexible care services provided under the EACH and the EACH-D programs
  - services provided by the Department of Veterans’ Affairs (DVA) under the Veterans’ Home Care (VHC)<sup>1</sup> and Community Nursing programs
- community care respite services, which include HACC respite and centre-based day care services and services provided under the NRCP
- services provided in mixed delivery settings, which are designed to provide flexible care or specific support:

---

<sup>1</sup> Unless otherwise stated, HACC expenditure excludes the DVA expenditure on VHC.

- 
- flexible care services, which address the needs of care recipients in ways other than that provided through mainstream residential and community care — services are provided under the Transition Care Program (TCP), Multi-purpose Service Program (MPS), Innovative Care Pool and National Aboriginal and Torres Strait Islander Flexible Aged Care Program
  - specific support services, which are provided to address particular needs such as those under the Long Stay Older Patients initiative and in Day Therapy Centres.

Older Australians are also users of other government services covered in this Report, including disability services (chapter 14), specialised mental health services (chapter 12), and housing assistance (chapter 16). Understanding the relationship between the health system and the aged care system is of particular importance (preface E and chapters 10–12), given that people aged 65 years or over account for around 50 per cent of all patient days in public hospitals (AIHW 2009). Interactions between health and aged care services are critical for the performance of both systems: for example, the number of operational residential aged care places can affect demand for public hospital beds, and throughput of older patients in acute and sub-acute care has a substantial effect on demand for residential and community aged care.

### **Indigenous data in the Aged care chapter**

The Aged care services chapter in the 2011 Report contains the following information on Indigenous people:

- age profile and target population differences between Indigenous and other Australians, June 2006
- Aged Care Assessment Team (ACAT) assessment rates, 2008-09
- variation in the proportions of Indigenous populations accessing aged care services from their proportion in the target population as a whole, June 2010
- residents per 1000 target population, 30 June 2010
- CACP recipients per 1000 target population, 30 June 2010
- recipients of HACC services by age and Indigenous status, 2009-10
- Commonwealth Carelink Centres, contacts per 1000 target population, by Indigenous status, 30 June 2010.

---

The aged care attachment contains additional data relating to Indigenous people including:

- target population data, by location
- government expenditure on Indigenous specific programs, 2009-10
- Indigenous permanent residents classified as high or low care and Indigenous CACP, EACH and EACH-D at 30 June 2010: age specific usage rates per 1000 people by remoteness
- Indigenous aged care recipients per 1000 Indigenous people aged 50 years or over and as a proportion of all recipients and by locality, 30 June 2010
- HACC client characteristics, 2009-10
- comparative characteristics of Indigenous HACC clients, 2009-10
- hospital patient days used by those eligible and waiting for residential aged care, 2008-09
- falls resulting in patient harm in residential aged care and treated in hospital, 2008-09.

## **Indigenous-specific services**

### *Indigenous-specific services —National Aboriginal and Torres Strait Islander Flexible Aged Care Program*

Flexible models of care are also provided under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program. These services are funded and operate outside the regulatory framework of the *Aged Care Act 1997*. Aboriginal and Torres Strait Islander people also access mainstream services under the *Aged Care Act 1997*, including those managed by Aboriginal and Torres Strait Islander organisations.

The National Aboriginal and Torres Strait Islander Flexible Aged Care Program aims to provide quality, flexible, culturally appropriate aged care to older Aboriginal and Torres Strait Islander people close to their home and community. Flexible Aged Care services deliver a mix of residential and community aged care services to meet the needs of the community.

Some services managed by non-Indigenous approved providers also have significant numbers of Aboriginal and Torres Strait Islander clients. All aged care services that are funded under the *Aged Care Act 1997* are required to provide culturally appropriate care. Whether they are located in a community or residential

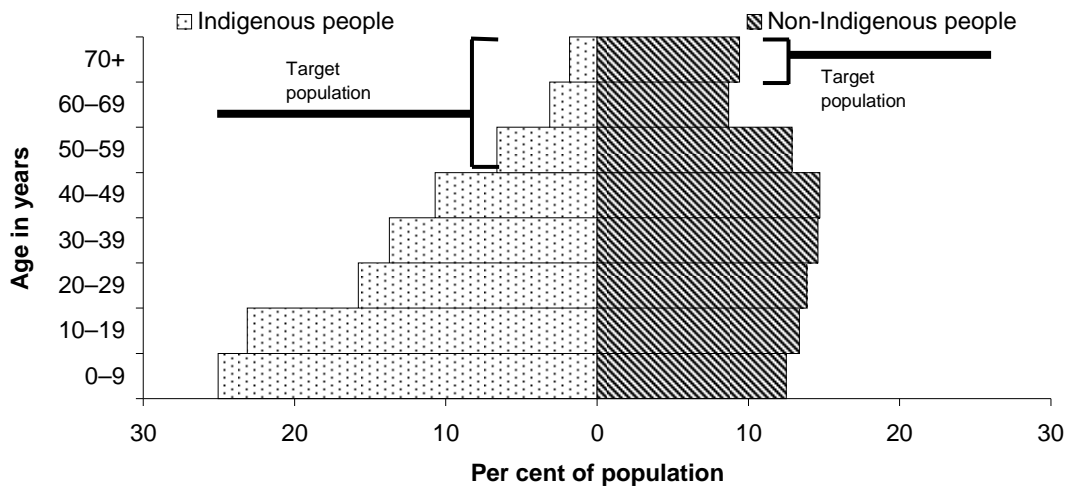

setting, services may be subject to specific conditions of allocation in relation to the proportion of care to be provided to particular groups of people, including Aboriginal and Torres Strait Islander people.

The Australian Government spent \$23.4 million on Indigenous specific services delivered under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program.

### *Characteristics of older Indigenous people*

The DoHA estimates that about 67 107 Indigenous people were aged 50 years or over in Australia at 30 June 2010 (table 13A.1). Although the Indigenous population is also ageing, there are marked differences in the age profile of Indigenous Australians compared with non-Indigenous Australians (figure 13.1). Estimates show life expectancy at birth in the Indigenous population is around 11.5 years less for males and 9.7 years less for females when compared with the total Australian population (ABS 2009). These figures indicate that Indigenous people are likely to need aged care services earlier in life, compared with the general population.

**Figure 13.1 Age profile and target population differences between Indigenous and other Australians, June 2006**

Source: ABS (2008) *Experimental Estimates of Aboriginal and Torres Strait Islander Australians*, June 2006, Cat. no. 3238.0.55.001, Canberra, 2011 Report, figure 13.5, p. 13.19.

## Aged Care Assessments

Aged care assessments are designed to assess the care needs of older people and assist them to gain access to the most appropriate type of care. The number of assessments of people aged 70 years or over and Indigenous people aged 50–69 years per 1000 target population varied across jurisdictions in 2008-09. The national rate was 87.8 assessments per 1000 people aged 70 years or over and Indigenous people aged 50-69 years. The rate for Indigenous people was 42.7 per 1000 Indigenous people aged 50 years or over (figure 13.2). Data on the numbers and rates of assessment for people of all ages by age group, Indigenous status, remoteness of residence and Socio-Economic Indexes for Areas (SEIFA), are in table 13A.15.

Figure 13.2 **Aged Care Assessment Team assessment rates, 2008-09<sup>a, b, c, d, e</sup>**

<sup>a</sup> Includes ACAT assessments for all services. <sup>b</sup> 'All people' includes all assessments of people aged 70 years or over and Indigenous people aged 50 years or over per 1000 people aged 70 years or over and Indigenous people aged 50 years or over. <sup>c</sup> 'Indigenous' includes all assessments of Indigenous people aged 50 years or over per 1000 Indigenous people aged 50 years or over. <sup>d</sup> The number of Indigenous assessments is based on self-identification of Indigenous status. <sup>e</sup> See table 13A.14 for further explanation of these data.

Source: Aged Care Assessment Program National Data Repository (unpublished); table 13A.14, 2011 Report, figure 13.6, p. 13.20.

## Community care services

Changing government policies over the past decade — shifting the balance of care away from the more intensive types of residential care towards home-based care — have meant that the CACP, EACH and EACH-D programs have become increasingly important components of the aged care system.

---

Indigenous age specific usage rates for CACP, EACH and EACH-D by remoteness category are in table 13A.9.

### **Framework of performance indicators**

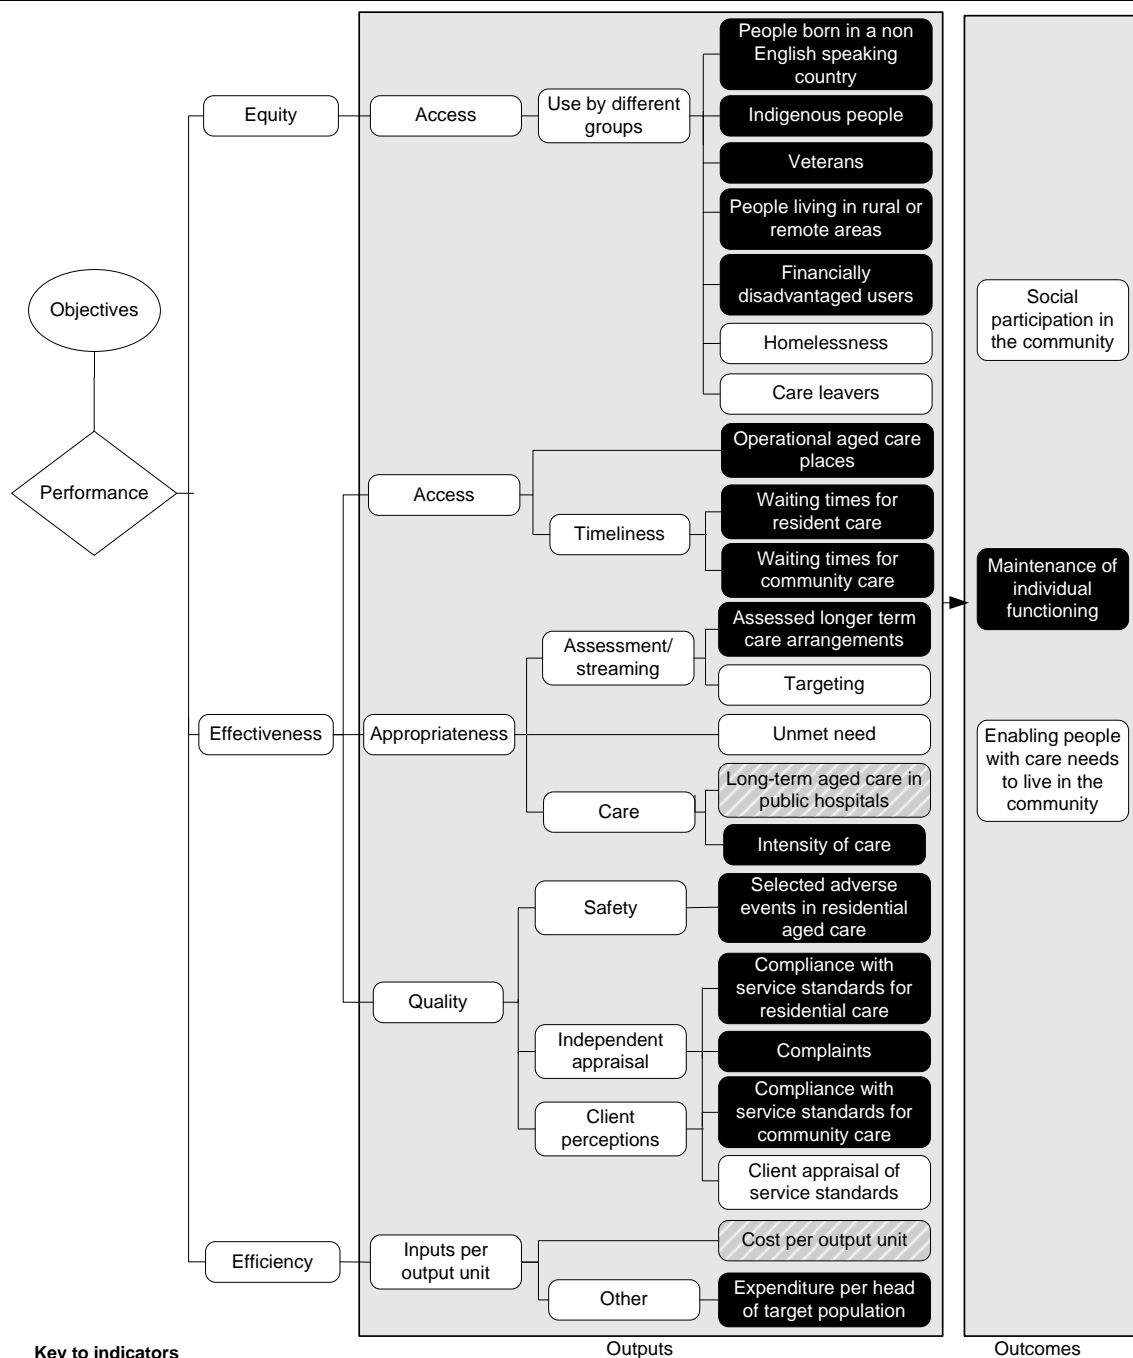

The Aged care services performance indicator framework outlined in figure 13.3 identifies the principal aged care services activity areas considered in the 2011 Report. Data for Indigenous people are reported for a subset of the performance indicators and are presented here. It is important to interpret these data in the context of the broader performance indicator framework. The framework shows which data are comparable. For data that are not considered directly comparable, the text includes relevant caveats and supporting commentary.

Indicator boxes presented throughout the chapter provide information about the reported indicators. As these are sourced directly from the 2011 Report, they may include references to data not reported for Indigenous people and therefore not included in this Compendium.

The Report's statistical appendix contains data that may assist in interpreting the performance indicators presented in this chapter. These data cover a range of demographic and geographic characteristics, including age profile, geographic distribution of the population, income levels, education levels, tenure of dwellings and cultural heritage (including Indigenous and ethnic status) (appendix A).

COAG has agreed six National Agreements (NAs) to enhance accountability to the public for the outcomes achieved or outputs delivered by a range of government services, (see chapter 1 for more detail on reforms to federal financial relations). The NHA covers the area of health and aged care. The Agreement include sets of performance indicators, for which the Steering Committee collates annual performance information for analysis by the COAG Reform Council. Revisions have been made to the performance indicators reported in this chapter to align with the performance indicators in the NHA.

**Figure 13.3 Performance indicators for aged care services**

**Key to indicators**

- Text** Data for these indicators comparable, subject to caveats to each chart or table
- Text** Data for these indicators not complete or not directly comparable
- Text** These indicators yet to be developed or data not collected for this Report

---

## Use by different groups

‘Use by different groups’ is an indicator of governments’ objective for the aged care system to provide equitable access to aged care services for all people who require these services (box 13.1).

### Box 13.1 Use by different groups

‘Use by different groups’ is defined by eight measures:

- variation in the proportion of people accessing residential services, HACC, CACPs, EACH and EACH-D services who are born in a non-English speaking country, from the proportion of people in the target population who are born in a non-English speaking country
- variation in the proportion of people accessing residential services, HACC, CACPs, EACH and EACH-D services who are Indigenous, from the proportion of people in the target population who are Indigenous
- the number of people born in non-English speaking countries using residential services, CACPs, EACH and EACH-D, divided by the number of people born in non-English speaking countries aged 70 years or over, benchmarked against the rate at which the general population (number of people aged 70 years or over plus Indigenous people aged 50–69 years) accesses the service
- the number of Indigenous people using residential services, CACP, EACH, and EACH-D services, divided by the number of Indigenous people aged 50 years or over (because Indigenous people tend to require aged care services at a younger age than the general population) benchmarked against the rate at which the general population (number of people aged 70 years or over plus Indigenous people aged 50–69 years) accesses the service
- the number of veterans aged 70 years or over in residential care divided by the total number of eligible veterans aged 70 years or over, where a veteran is defined as a DVA Gold or White card holder
- access to HACC services for people living in rural or remote areas — the number of hours of HACC service received (and, separately, meals provided) divided by the number of people aged 70 years or over plus Indigenous people aged 50–69 years for major cities, inner regional areas, outer regional areas, remote areas and very remote areas
- the rate of contacts with Commonwealth Respite and Carelink Centres for Indigenous people benchmarked against the rate for all people
- the number of new residents classified as concessional or assisted or supported, divided by the number of new residents.

(Continued next page)

---

### Box 13.1 (continued)

In general, usage rates for special needs groups similar to those for the broader aged care population are desirable, but interpretation of results differs for some special needs groups because:

- there is evidence that Indigenous people have higher disability rates than those of the general population, which suggests a greater level of need for services compared with those in the broader aged care population
- for financially disadvantaged users, Australian Government planning guidelines require that services allocate a minimum proportion of residential places for concessional, assisted or supported residents. These targets range from 16 per cent to 40 per cent of places, depending on the service's region. Usage rates equal to, or higher than, the minimum rates are desirable.

Use by different groups is a proxy indicator of equitable access. Various groups are identified by the *Aged Care Act 1997* and its principles (regulations) as having special needs, including people from Indigenous communities, people born in non-English speaking countries, people who live in rural or remote areas, people who are financially or socially disadvantaged, veterans (including widows and widowers of veterans), homelessness and care leavers.

Several factors need to be considered in interpreting the results for this set of indicators:

- Cultural differences may influence the extent to which people born in non-English speaking countries use different types of services.
- Cultural differences and geographic location may influence the extent to which Indigenous people use different types of services.
- The availability of informal care and support may influence the use of aged care services in different population groups.

Data reported for this indicator are comparable.

Data quality information for two measures (access to residential aged care services by Indigenous people and people born in a mainly non-English speaking country and access to aged care community programs by Indigenous people and people born in a mainly non-English speaking country) defined for this indicator is at [www.pc.gov.au/gsp/reports/rogs/2011](http://www.pc.gov.au/gsp/reports/rogs/2011).

Data quality information for the other measures is under development.

Data presented for this indicator are organised by the type of service provided, with sub-sections for the relevant special needs groups reported against that service.

---

*Access to residential care services, HACC, CACP, EACH and EACH-D services by Indigenous people*

In comparison to their proportion of the target population as a whole, Indigenous people are under-represented in access to residential care, HACC, EACH and EACH-D services (figure 13.4).

However, in relation to the CACP program in the majority of jurisdictions and nationally, Indigenous people are over-represented, compared with the proportion of this group in the target population. Figure 13.4 demonstrates this over- and under-representation by reflecting the variation in the rate of access of the special needs target population from their proportion in the target population as a whole. If the special needs group accessed services in proportion to their general representation in the target population, no percentage variation will be observed. If they access services at a greater rate, a positive percentage from the benchmark rate will be observed, or, if services are accessed at a lower rate, a negative percentage will be observed.

**Figure 13.4 Variation in the proportions of Indigenous populations accessing aged care services from their proportion in the target population as a whole, June 2010<sup>a, b, c</sup>**

Aged care residents
  CACP recipients
  EACH recipients
  EACH-D recipients
  HACC clients

**Proportion of Indigenous people aged 50 years or over receiving services<sup>d, e</sup>**

<sup>a</sup> The proportion of HACC funded agencies that submitted Minimum Data Set data for 2009-10 differed across jurisdictions and ranged from 91 per cent to 100 per cent. Consequently, actual service levels were higher than stated. <sup>b</sup> Reports provisional HACC data that have not been validated and may be subject to revision. <sup>c</sup> Some of these proportions are calculated using small numbers. In particular, this applies to the proportions for EACH and EACH-D. One example is the Tasmanian EACH-D proportion for people born in a mainly non-English speaking country which is calculated using a number between 10 and 20. See 2011 Report table 13A.30 for more details. <sup>d</sup> The ACT has a very small Indigenous population aged 50 years or over (table 13A.2) and a small number of CACP recipients results in a very high provision ratio. <sup>e</sup> Excludes National Aboriginal and Torres Strait Islander Flexible Aged Care Program recipients.

Source: DoHA (unpublished); table 13A.6; 2011 Report, figure 13.11, p. 13.37.

*Access to residential aged care services by Indigenous people*

In all jurisdictions at 30 June 2010, on average, Indigenous people had lower rates of use of aged care residential services (23.4 and 61.8 per 1000 of the relevant target populations respectively), compared with the population as a whole (78.4 per 1000) (figure 13.5).

Figure 13.5 Residents per 1000 target population, 30 June 2010<sup>a, b, c</sup>

<sup>a</sup> 'All residents' data are per 1000 people aged 70 years or over plus Indigenous people aged 50–69 years. <sup>b</sup> 'Indigenous residents' data are per 1000 Indigenous people aged 50 years or over. <sup>c</sup> Data for residents from a non-English speaking country are per 1000 people from non-English speaking countries aged 70 years or over.

Source: DoHA (unpublished); tables 13A.4 and 13A.7; 2011 Report, table 13A.31; 2011 Report, figure 13.12, p. 13.38

Age specific usage rates for these services, by jurisdiction and remoteness are included in the Report. These data suggest there is significant variation in usage rates by remoteness area. In general, differences amongst jurisdictions are less marked than differences between remoteness areas (tables 13A.5, 13A.13, 13A.14).

#### *Access to aged care community programs by Indigenous*

The number of Indigenous CACP recipients per 1000 Indigenous people aged 50 years or over was 26.8 nationally. These figures compare to a total of 18.9 per 1000 of the target population (people aged 70 years or over plus Indigenous people aged 50–69 years) (figure 13.6).

**Figure 13.6 Community Aged Care Package recipients per 1000 target population, 30 June 2010<sup>a, b, c, d, e</sup>**

<sup>a</sup> 'All recipients' data are per 1000 people aged 70 years or over plus Indigenous people aged 50–69 years. <sup>b</sup> 'Indigenous recipients' data are per 1000 Indigenous people aged 50 years or over. <sup>c</sup> Data for recipients from non-English speaking countries are per 1000 people from non-English speaking countries aged 70 years or over. <sup>d</sup> The ACT has a very small Indigenous population aged 50 years or over (table 13A.2), and a small number of packages result in a very high provision ratio. <sup>e</sup> CACPs provide a more flexible model of care, more suitable to remote Indigenous communities, so areas such as the NT have a higher rate of CACP recipients per 1000 people.

Source: DoHA (unpublished); tables 13A.4 and 13A.7; 2011 Report, table 13A.31; 2011 Report, figure 13.13, p. 13.39.

Age–sex specific usage rates by jurisdiction, remoteness and Indigenous usage vary between jurisdictions and remoteness categories for CACP. For EACH and EACH-D, the differences are less marked. However, the EACH and EACH-D programs are small and growing rapidly (table 13A.9; 2011 Report, tables 13A.39-40 and 13A.43-44).

### *Access to the HACC program*

HACC services are provided in the client's home or community for people with moderate, severe or profound disability and their carers. The focus of this chapter is all people 70 years or over and Indigenous people aged 50–69 years. The proportion of HACC clients aged 70 years or over during 2009-10 was 69.4 per cent (table 13A.10).

Reported use of HACC services showed a substantial difference between all users and Indigenous users across all age groups in 2009-10. This reflects the difference in morbidity and mortality trends between Indigenous people and the general population. The proportion of Indigenous HACC clients who are aged 70 years

or over is 27.8 per cent and the proportion of non-Indigenous HACC clients who are aged 70 years or over is 70.8 per cent (figure 13.7).

**Figure 13.7 Recipients of HACC services by age and Indigenous status, 2009-10<sup>a, b</sup>**

<sup>a</sup> Reports provisional HACC data that have not been validated and may be subject to revision. <sup>b</sup> The proportion of HACC clients with unknown Indigenous status differed across jurisdictions. Nationally, the proportion of all HACC clients with unknown Indigenous status was 8.6 per cent (2011 Report, table 13A.59).

Source: DoHA (unpublished); table 13A.11; 2011 Report, figure 13.15, p. 13.42.

## Access by Indigenous people to Commonwealth Respite and Carelink Centres

Commonwealth Respite and Carelink Centres are information centres for older people, people with disabilities, carers and service providers. Information is provided on community services and aged care, disability and other support services available locally or anywhere in Australia, the costs of services, assessment processes and eligibility criteria. The national rate at which Indigenous people contacted Respite and Carelink Centres at 30 June 2010, was 37.3 people per 1000 Indigenous people in the Indigenous target population (Indigenous people aged 50 years or over). The rate for all Australians was 96.6 per 1000 people in the target population (people aged 70 years or over plus Indigenous people aged 50–69 years). These figures varied across jurisdictions (figure 13.8).

**Figure 13.8 Commonwealth Respite and Carelink Centres, contacts per 1000 target population, by Indigenous status, 30 June 2010<sup>a, b, c, d</sup>**

<sup>a</sup> Contacts include phone calls, visits, emails and facsimiles. <sup>b</sup> 'Indigenous contacts' refer to contacts by Indigenous people per 1000 Indigenous people in the target population. <sup>c</sup> 'All contacts' refers to contacts per 1000 target population. <sup>d</sup> People making contact self identify as Indigenous. Therefore, there is likely to be substantial under-reporting of Indigenous status.

Source: DoHA (unpublished); table 13A.13; 2011 Report, figure 13.16, p. 13.43.

---

## Definitions of key terms and indicators

### Aged care

Formal services funded and/or provided by governments that respond to the functional and social needs of frail older people, and the needs of their carers. Community aged care services aim to optimise independence and to assist frail older people to stay in their own homes, while residential care services provide accommodation and care for those who can no longer be assisted to stay at home. Assessment of care needs is an important component of aged care.

The majority of aged care services assist in activities of daily living such as personal care (for example, bathing and dressing), housekeeping and meal provision. Other services aim to promote social participation and connectedness. These services are delivered by trained aged care workers and volunteers. However, aged care services may also be delivered by health professionals such as nurses and occupational therapists.

Aged care services generally aim to promote wellbeing and foster function rather than to treat illness. Although some aged care services such as transition care have a specific restorative role, they are distinguished from the health services described in Part E of this Report.

Aged care services may be funded through programs specifically or mainly directed to older people, or through programs that address the needs of people of different ages. Generally, the target groups of aged care services are people aged 70 years or over and Indigenous people aged 50 years or over.

### Ageing in place in residential care

An approach that aims to provide residents with appropriate care and increased choice by allowing them to remain in the same facility regardless of changes in their level of care needs. It also allows couples with different levels of care needs to be cared for in the same facility. The main facet of 'ageing in place' is that funding is tied to the assessed care needs of the client rather than to the services provided by the facility.

One of the objectives of Australian Government aged care legislation is 'to promote ageing in place through the linking of care and support services to the places where older people prefer to live' (*Aged Care Act 1997* (Cwlth), s.2-1 [1j]).

### Disability

A limitation, restriction or impairment that has lasted, or is likely to last, for at least six months and restricts everyday activities.

### HACC target population

The HACC Target population is people in the Australian community who, without basic maintenance and support services provided under the scope of the HACC Program, would be at risk of premature or inappropriate long term residential care, including (i) older and frail people with moderate, severe or profound disabilities; (ii) younger people with moderate, severe or profound disabilities; and (iii) such other classes of people as are agreed upon, from time to time, by the Commonwealth Minister and the State Minister. The HACC Target Population is estimated by applying the proportion of people in households with a moderate, severe, or profound disability as reported in the ABS 2003 *Survey of Disability, Ageing and Carers* to the ABS Population Projections by SLA 2002–2022.

---

<b>High/low care recipient</b>	<p>On entry, a resident is classified as high or low care based on their ACAT assessment and their approved provider's appraisal of their care needs under the ACFI.</p> <p>Residents whose ACAT approval is not limited to low care are classified as high care if they have an ACFI appraisal of:</p> <ul style="list-style-type: none"> <li>• high in Activities of Daily Living, or</li> <li>• high in Complex Health Care, or</li> <li>• high in Behaviour, together with low or medium in at least one of the Activities of Daily Living or Complex Health Care domain, or</li> <li>• medium in at least two of the three domains.</li> </ul> <p>All other ACAT approval and ACFI appraisal combinations result in a classification of low level care.</p> <p>A resident's care needs may change over time resulting in a change in classification from low to high level care (ageing in place).</p>
<b>People with a moderate disability</b>	Where a person does not need assistance, but has difficulty with self-care, mobility or communication.
<b>People with a profound disability</b>	Where a person is unable to perform self-care, mobility and/or communication tasks, or always needs assistance.
<b>People with a severe disability</b>	Where a person sometimes needs assistance with self-care, mobility or communication.
<b>Personal care Places</b>	<p>Assistance in undertaking personal tasks (for example, bathing).</p> <p>A capacity within an aged care service for the provision of residential care, community care or flexible care in the residential care context to an individual (<i>Aged Care Act 1997 (Cwlth)</i>); also refers to 'beds' (<i>Aged Care (Consequential Provisions) Act 1997 (Cwlth)</i>, s.16).</p>
<b>Resident</b>	For the purposes of the <i>Aged Care Act 1997</i> , a person who is being provided with residential care through an aged care service conducted by an approved provider under the Act.
<b>Respite care</b>	Alternative care arrangements for dependent people living in the community, with the primary purpose of giving their carer a short term break from their usual caring commitments.
<b>Special needs groups</b>	Section 11-3 of the <i>Aged Care Act</i> , specifies the following people as people with special needs: people from Aboriginal and Torres Strait Islander communities; people from non-English speaking countries; people who live in rural or remote areas; and people who are financially or socially disadvantaged. Principles (Regulations) made under s. 11-3 also specify veterans as a special needs group.

---

## List of attachment tables

Attachment tables for data within this chapter are contained in the attachment to the Compendium. These tables are identified in references throughout this chapter by an 'A' suffix (for example, table 13A.3 is table 3). Attachment tables are provided on the Review website ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)).

<b>Table 13A.1</b>	Target population data, by location ('000)
<b>Table 13A.2</b>	People receiving aged care services, 2009-10
<b>Table 13A.3</b>	Government real expenditure on aged care services provided in mixed delivery settings (2009-10 \$)
<b>Table 13A.4</b>	Aged care recipients per 1000 people aged 70 years or over plus Indigenous people aged 50–69 years, 30 June
<b>Table 13A.5</b>	Aged care recipients per 1000 people aged 70 years or over plus Indigenous people aged 50–69 years by locality, 30 June
<b>Table 13A.6</b>	Aged care recipients from special needs groups, June 2010 (per cent)
<b>Table 13A.7</b>	Indigenous aged care recipients per 1000 Indigenous people aged 50 years or over and as a proportion of all recipients, 30 June
<b>Table 13A.8</b>	Indigenous aged care recipients per 1000 Indigenous people aged 50 years or over by locality, 30 June

# 13A Aged care services — attachment

Tables in this attachment are sourced from the Aged care services attachment of the 2011 Report — table numbers from the 2011 Report are identified in the source information. For example, a source reference to ‘2011 Report, table 13A.15’ refers to attachment table 15 of attachment 13A of the 2011 Report.

Definitions for indicators and descriptors in this attachment are in the Aged care services chapter of the Compendium.

Data in this Report are examined by the Aged Care Services Working Group, but have not been formally audited by the Secretariat. Unsourced information was obtained from the Australian, State and Territory governments.

This file is available in Adobe PDF format on the Review web page ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)).

(a) Geographical data are based on the ABS Australian Standard Geographic Classification of Remoteness Areas. Data are classified according to an index of remoteness which rates each ABS census district based on the number and size of towns, the distance to major towns and urban centres. For more information refer to the Australian Standard Geographic Classification (ABS Publication 1216.0). The proportions of population in each Statistical Local Area (SLA) were attributed to Remoteness Areas (RA) by DoHA, using ABS SLA to RA concordance.

(b) Data for years prior to 2008 are population projections by SLA for 2002–2022 based on 2001 Census prepared for DoHA by ABS according to assumptions agreed to by DoHA. Data for June 2008 are preliminary population projections by SLA for 2006–2026 based on 2006 Census prepared by ABS for DoHA according to assumptions agreed to by DoHA. Data for years from June 2009 are population projections by SLA for 2007–2027 based on 2006 Census prepared by ABS for DoHA according to assumptions agreed to by DoHA.

Table 13A.1 Target population data, by location ('000) (a), (b), (c)

	NSW	Vic	Qld	WA	SA	Tas	ACT	NT	Aust
--	-----	-----	-----	----	----	-----	-----	----	------

- (c) Data in this table are utilised to determine the target populations for the chapter.
- (d) Data for people born in a non-English speaking country prior to 2008 are estimates based on ratios from ABS, CDATE 2001 Release 2 applied to ABS population projections by SLA 2002–2022 (unpublished), based on 2001 Census. Data for June 2008 are census count of persons 70 plus born overseas in countries other than main English-speaking countries increased by ratio (70 plus projected population 2009) / (70 plus census count 2006) and then distributed amongst states and remoteness areas in the same proportions as corresponding data published in the 2009 Report. Data from June 2009 are based on ratios from ABS 2006 Census data applied to population projections by SLA 2007–2027 (unpublished, produced for DoHA by ABS). People born in a non-English speaking country refers to those born overseas in countries other than UK, Ireland, NZ, Canada, South Africa, and USA.
- (e) Indigenous data prior to 2008 are Indigenous estimates based on ratios from ABS Census 2001 data applied to population projections by SLA 2002–2022. Data for June 2008 are determined as follows: observed average annual growth at state-level in ABS Experimental Indigenous Estimated Residential Populations (ERPs) between 2001 and 2006 for total Indigenous persons of all ages was applied to project 2006 ERPs forward to 2008. The increase from 2001 to 2006 contains unexplained population increase in addition to demographic population increase. Indigenous population estimates for June 2009 onwards are based on ratios from ABS 2006 Experimental Indigenous ERP data applied to population projections by SLA 2007–2027 (unpublished, produced for DoHA by ABS).

.. Not applicable. – Nil or rounded to zero.

Source: DoHA unpublished; Population projections by SLA for 2007–2027 prepared for DoHA by ABS according to assumptions agreed to by DoHA unpublished; Projections based on ABS experimental Indigenous ERPs by remoteness areas as at June 2006 (ABS Cat. no. 3238.0.55.001) DoHA unpublished; *ABS experimental estimates and projections, Aboriginal and Torres Strait Islander Australians*, 1991 to 2009 (ABS Cat. no. 3238.0); *Experimental estimates of Aboriginal and Torres Strait Islander Australians*, Jun 2006 (ABS Cat. no. 3238.0.55.001); Census 2006 data; ABS unpublished data sourced by DoHA; 2011 Report, table 13A.2.

(a) Recipient numbers in care is a distinct count of clients at any time in the 12 month period to 30 June 2010. Clients may have care under multiple types or states, so a client may be counted twice.

(b) Data is presented at the program level only. Since an individual may receive services under more than one aged care program throughout the year, the number of unique individuals accessing aged care cannot be determined.

(c) State or territory is based on the location of the service provider outlet. For all programs excluding Home and Community Care, where a person moved from one state to another they are counted uniquely in each state. Thus, a person who moved between states within the year will be double counted, making the total number of people greater than the number of unique individuals receiving services under the program.

Table 13A.2

Table 13A.2 People receiving aged care services, 2009-10 (a), (b), (c), (d)

	Unit	NSW	Vic	Qld	WA	SA	Tas	ACT	NT	Aust
(d)	Remoteness category is based on location of service provider, except for the HACC program where State or Territory is based on the location of the HACC Agency and the Remoteness Category is based on the postcode of the care recipient. Where a person moved from one state to another they are counted uniquely in each state against remoteness indicators. A person who has moved between states within the year will be double counted, making the total number of people in the 'remoteness' count greater than the number of unique individuals receiving services under the program.									
(e)	In Tasmania, includes very remote as numbers are too small to appear separately.									
(f)	In Tasmania and the ACT, includes Indigenous Australians as numbers are too small to appear separately.									
(g)	In Victoria and Tasmania, includes remote as numbers are too small to appear separately. In Queensland, includes remote and very remote as numbers are too small to appear separately.									
(h)	In NSW, WA, SA and the ACT, includes Indigenous Australians as numbers are too small to appear separately.									
(i)	In the NT, includes people aged 90+ as numbers are too small to appear separately.									
(j)	In Tasmania, includes Indigenous Australians as numbers are too small to appear separately.									
(k)	In Tasmania, includes outer regional as numbers are too small to appear separately.									
(l)	Client age is calculated as at 30 June 2010. For the category aged 50–69 years, data only includes HACC clients aged 50–69 years who reported as Indigenous. That is, it excludes HACC clients aged 50–69 years with an unknown Indigenous status or who reported as non-Indigenous.									
(m)	For ACT, major cities includes ACT inner regional.									
(n)	Population is people aged 70 years or over plus, for HACC only, Indigenous people aged 50–69 years at 30 June 2010.									
(o)	Population figure for 90 plus is not available, so rate per 1000 is based on sum of age groups 85 to 89 and 90 plus.									
	<b>na</b> Not available. .. Not applicable. - Nil or rounded to zero. <b>np</b> Not published

(a) Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GDP price deflator 2009-10 = 100 (table AA.11).

(b) Other expenditure is Australian Government expenditure that cannot be attributed to individual states or territories.

(c) The Long Stay Older Patient Initiative is a four year program established by COAG. More details on the program are at 2011 Report, box 13.4 of the Aged care services chapter.

(d) The objective of Day Therapy Centres is to assist older people to maintain or recover functional independence, through the provision of therapy services to allow them to remain in the community or in low level residential care. Funding is Australian Government only.

(e) The objective of the National Continence Management Strategy is to improve continence awareness, management and treatment so that more Australians can live and participate in their community with confidence and dignity.

(f) Data relate to expenditure administered under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program which is aimed at providing quality, flexible, culturally appropriate aged care to older Aboriginal and Torres Strait Islander people close to their home and community.

- (a) Data include high care residential (permanent and respite), low care residential (permanent and respite), EACH packages, EACH-D packages and CACPs. Data for EACH-D packages prior to 2009 are included in EACH packages.
- (b) For high and low care residential, CACPs and total: Includes flexible places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, in all years except 2007. In 2010, Innovative Pool programs and care provided by Multi-Purpose services are included.
- (c) Ratios in remote areas can be affected by small movements in resident numbers.
- (d) Geographical data are based on the ABS Australian Standard Geographic Classification of Remoteness Areas (RA) (see table 13A.2 note (a)). For more information refer to the Australian Standard Geographic Classification (ABS Publication 1216.0). The proportions of population in each Statistical Local Area (SLA) are attributed to Remoteness Areas (RA) by DoHA, using ABS SLA to RA concordance.
- (e) Totals may not add due to rounding.
- (f) High care residential aged care includes permanent residents and respite care recipients. Low care residential aged care includes permanent residents and respite care recipients.
- (g) Very remote totals for 2007 do not include EACH.  
.. Not applicable. – Nil or rounded to zero.

Source: DoHA unpublished; 2011 Report, table 13A.29.

HACC recipients from a non-English speaking country	-2.9	-0.6	-0.7	6.7	10.5	20.3	18.3	-17.0	1.6

(a) See table 13A.1 for notes and sources of population data.

(b) Reports provisional HACC data that has not been validated and may be subject to revision.

(c) Excludes National Aboriginal and Torres Strait Islander Flexible Aged Care Program recipients.

(d) Some of these proportions are calculated using small numbers. In particular, this applies to the proportions for EACH and EACH-D. A "\*" indicates the rate has been calculated with values between from 10 to <20. A "\*\*\*" indicates the rate has been calculated with values below 10.

(e) Indigenous people aged 50 or over as a percentage of the total population aged 70 or over plus the number of Indigenous people aged 50 to 69 years old.

(f) Indigenous status based on self-identification.

(g) The proportion of HACC clients with unknown or null Indigenous status differed across jurisdictions and ranged from 5.8 per cent to 12.8 per cent. Nationally, the proportion of HACC clients with unknown or null Indigenous status was 8.6 per cent.

(h) The proportion of HACC clients with unknown or invalid date of birth differed across jurisdictions and ranged from zero per cent to 1.5 per cent. Nationally, the proportion of HACC clients with unknown or invalid date of birth was 0.5 per cent.

(a) Data include high care residential (permanent and respite), low care residential (permanent and respite), EACH packages, EACH-D packages and CACPs. Data for EACH-D packages prior to 2009 are included in EACH packages.

(b) Unknown responses have been attributed *pro rata*.

(c) Reports only people who are recorded as Indigenous.

(d) Includes National Aboriginal and Torres Strait Islander Flexible Aged Care Program places attributed as residents. Excludes multi-purpose services.

(e) Indigenous population estimates based on ratios from unpublished ABS 2006 Indigenous ERP data applied to Population Projections by SLA 2007–2027. See table 13A.2 for further information.

(f) Totals may not add due to rounding.

**Table 13A.7 Indigenous aged care recipients per 1000 Indigenous people aged 50 years or over and as a proportion of all recipients, 30 June (a), (b), (c), (d), (e), (f), (g)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT (h)</i>	<i>NT</i>	<i>Aust</i>
--	-------------	------------	------------	------------	-----------	-----------	------------	----------------	-----------	-------------

(g) High care residential aged care includes permanent residents and respite care recipients. Low care residential aged care includes permanent residents and respite care recipients.

(h) The ACT has a very small Indigenous population aged over 50 years and a small number of CACPs will result in a very high provision ratio.

– Nil or rounded to zero.

(a) Data include high care residential (permanent and respite), low care residential (permanent and respite), EACH packages, EACH-D packages and CACPs. Data for EACH-D packages prior to 2009 are included in EACH packages.

(b) Unknown responses have been attributed *pro rata*.

(c) Reports only people who are recorded as Indigenous.

(d) Includes National Aboriginal and Torres Strait Islander Flexible Aged Care Program places attributed as residents. Excludes multi-purpose services.

(e) Geographical data are based on the ABS Australian Standard Geographic Classification of Remoteness Areas (RA) (see table 13A.1 note (a)). For more information refer to the Australian Standard Geographic Classification (ABS Publication 1216.0). The proportions of population in each Statistical Local Area (SLA) are attributed to Remoteness Areas (RA) by DoHA, using ABS SLA to RA concordance.

(f) Indigenous population estimates based on ratios from unpublished ABS 2006 Indigenous ERP data applied to Population Projections by SLA 2007–2027. See table 13A.1 for further information.

(g) Totals may not add due to rounding.

(h) High care residential aged care includes permanent residents and respite care recipients. Low care residential aged care includes permanent residents and respite care recipients.

(i) The ACT has a very small Indigenous population aged over 50 years and a small number of CACPs will result in a very high provision ratio.

.. Not applicable. – Nil or rounded to zero.

Source: DoHA unpublished; 2011 Report, table 13A.34.

- (a) Geographical data are based on the ABS Australian Standard Geographic Classification of Remoteness Areas. Data are classified according to an index of remoteness which rates each ABS census district based on the number and size of towns, the distance to major towns and urban centres. For more information refer to the Australian Standard Geographic Classification (ABS Publication 1216.0). See notes to table 13A.1.
- (b) Data exclude flexible places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool programs and care provided by Multi-Purpose services.
- (c) All permanent residents are included.
- (d) Indigenous population estimates are based on 30 June 2010 Indigenous projected population (ABS Cat. no. 3238.0, Series B). The Indigenous estimated resident population at 30 June 2006 (ABS Cat. no. 3238.0.55.001) was used to proportionally split the remoteness areas classification of Inner Regional/Outer Regional and Remote/Very Remote.

Table 13A.10

**Table 13A.10 HACC client characteristics (a)**

	Unit	NSW	Vic	Qld	WA	SA	Tas	ACT	NT	Aust
(b)	The proportion of HACC clients with 'date of birth' unknown differed across jurisdictions and years.									
(c)	The proportion of HACC clients with unknown gender differed across jurisdictions and years.									
(d)	The proportion of HACC clients with unknown Indigenous status differed across jurisdictions and years.									
(e)	The proportion of HACC clients with unknown language spoken at home differed across jurisdictions and years.									
(f)	The proportion of HACC clients with unknown carer status differed across jurisdictions and years.									
(g)	The proportion of HACC funded agencies that submitted HACC MDS data differed across jurisdictions and years. For 2009-10, the proportion ranged from 91 per cent and 100 per cent. Actual service levels will be higher than those reported here.

(a) Reports provisional data that have not been validated and may be subject to revision.

(b) The proportion of HACC clients with unknown or null Indigenous status differed across jurisdictions and years. In 2009-10, the proportion ranged from 5.8 per cent to 12.8 per cent. Nationally, the proportion of HACC clients with unknown or null Indigenous status was 8.6 per cent.

(c) The proportion of HACC clients with unknown date of birth differed across jurisdictions and years.

(d) Totals may not add as a result of rounding.

(e) Calculations include HACC clients with unknown or null Indigenous Status.

– Nil or rounded to zero.

Table 13A.12

**Table 13A.12 Comparative characteristics of Indigenous HACC clients (a), (b), (c), (d), (e), (f), (g), (h)**

	Unit	NSW	Vic	Q/d	WA	SA	Tas	ACT	NT	Aust	
(a)	Population projections by SLA for 2007-2027 prepared by ABS according to assumptions agreed to by DoHA. Indigenous population estimates for June 2010 are based on ratios from ABS 2006 Experimental Indigenous ERP data applied to Population Projections by SLA 2007-2027.										
(b)	The proportion of HACC clients with unknown or null Indigenous status differed across jurisdictions and years. In 2009-10, the proportion ranged from 5.8 per cent to 12.8 per cent. Nationally, the proportion of HACC clients with unknown or null Indigenous status was 8.6 per cent.										
(c)	The proportion of HACC clients with unknown or invalid date of birth differed across jurisdictions and years. In 2009-10, it ranged from zero to 1.5 per cent. Nationally, the proportion of HACC clients with unknown or invalid date of birth was 0.5 per cent.										
(d)	The proportion of HACC clients with 'Nil' and 'Not stated' sex differed across jurisdictions and years.										
(e)	The proportion of HACC clients with 'Nil' and 'Not stated' main language spoken at home differed across jurisdictions and years.										
(f)	The proportion of HACC clients with 'Nil' and 'Not stated' pension benefit status differed across jurisdictions and years.										
(g)	The proportion of HACC clients with 'Nil' and 'Not stated' living arrangements differed across jurisdictions and years.										
(h)	The proportion of HACC clients with 'Nil' and 'Not stated' carer availability differed across jurisdictions and years.										

– Nil or rounded to zero.

All contacts per 1000 target population	88.1	47.5	173.2	115.2	86.8	111.0	101.4	31.1	96.6

(a) Contacts include phone calls, emails, visits and facsimiles.

(b) People making contact self identify as Indigenous. Therefore, there is likely to be substantial under reporting of Indigenous status.

(c) Indigenous people aged 50 years or over. See footnotes to table 13A.1 for details of population calculations.

(d) Number of instances of assistance not carers.

(e) All people aged 70 years or over plus Indigenous people aged 50-69 years. See footnotes to table 13A.1 for details of population calculations.

- (a) Data in this table includes complete assessments only for years after 2006-07. For previous years the following information applies: in May 2003 a new Minimum Data Set (MDSv2) was introduced for the Aged Care Assessment Program. With the exception of Queensland and about half of NSW, it had been adopted by states and territories when data shown in this table was collected. The data in this table has been selected to match MDSv1 and MDSv2 coding and to be comparable as closely as possible with previous reports containing MDSv1 data. Includes only assessments (completed and not completed) for the stated client group. (Some assessments are not completed because, for example, the client's circumstances may change or the client may withdraw mid-way through the assessment process. Separate counting of completed and not completed assessments has been introduced over time with the adoption of the MDSv2).
- (b) The number of Indigenous assessments is based on self-identification of Indigenous status. Therefore these figures may not accurately represent the assessment of Indigenous persons.
- (c) The total number of assessments for Queensland in 2005-06 is underestimated by approximately 2000 due to technical failure.

(a) Socio-Economic Indexes for Areas (SEIFA) quintiles are based on the ABS Index of Relative Socio-economic Disadvantage (IRSD), with quintile 1 being the most disadvantaged and quintile 5 being the least disadvantaged. The SEIFA quintiles represent approximately 20 per cent of the national population, but do not necessarily represent 20 per cent of the population in each State or Territory.

(b) Rate is expressed as number of people in the nominated age group who have had an Aged Care Assessment Team (ACAT) assessment in that State, Territory or nationally, per 1000 people in that age group in that state, territory or nationally.

(c) Relevant population is people aged 70 years or over plus Indigenous people aged 50–69 years.

.. Not applicable. – Nil or rounded to zero.

(a) Data for Tasmania and ACT should be interpreted with caution until further assessment of Indigenous identification is completed. The Australian totals for Indigenous/Other Australians do not include data for the ACT or Tasmania.

(b) 'Other Australians' includes non-Indigenous people and those for whom Indigenous status was not stated.

(c) Disaggregation by remoteness area is by usual residence, not remoteness of hospital. Separations are reported by jurisdiction of hospital, regardless of the jurisdiction of usual residence.

(d) SEIFA quintiles are based on the ABS Index of Relative Socio-economic Disadvantage (IRSD), with quintile 1 being the most disadvantaged and quintile 5 being the least disadvantaged. The SEIFA quintiles represent approximately 20 per cent of the national population, but do not necessarily represent 20 per cent of the population in each state or territory. Disaggregation by SEIFA area is by usual residence, not location of the hospital.

(e) Total includes separations for which a SEIFA category or remoteness area could not be assigned as the place of residence was not known or not stated.

(f) Data for Tasmania does not include two private hospitals that account for approximately one eighth of Tasmania's total hospital separations.

– Nil or rounded to zero. **np** Not published.

(a) Refers to the number of hospital separations involving one or more falls in an aged care facility, not the number of falls.

(b) Data for Tasmania and ACT should be interpreted with caution until further assessment of Indigenous identification is completed. The Australian totals for Indigenous/Other Australians do not include data for the ACT or Tasmania.

(c) Disaggregation by remoteness area is by usual residence (numerator) and client postcode prior to admission to residential aged care (denominator), not remoteness of hospital. Separations are reported by jurisdiction of hospitalisation, regardless of the jurisdiction of usual residence or residential aged care facility.

(d) SEIFA quintiles are based on the ABS Index of Relative Socio-economic Disadvantage (IRSD), with quintile 1 being the most disadvantaged and quintile 5 being the least disadvantaged. The SEIFA quintiles represent approximately 20 per cent of the national population, but do not necessarily represent 20 per cent of the population in each State or Territory. Disaggregation by SEIFA is based on the patient's usual residence (numerator) and client postcode prior to admission to residential aged care (denominator), not the location of the hospital or residential aged care facility.

(e) Total includes separations for which place of residence was not known or not stated.
