(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution.

(b) Information for some young people aged 15–17 years was provided by an adult proxy. For the majority of people aged 15 years and over, data were self-reported.

(c) The rate ratio is calculated by dividing the rate for Indigenous people by the corresponding rate for non-Indigenous people.

(d) People aged 18 years and over.

(e) Includes people not at school.

(f) Includes people who never attended school.

(g) Very remote areas of Australia were out of the scope of the 2004-05 and 2007-08 National Health Surveys therefore non-Indigenous data for remote areas are unavailable.

**np** Not published. — Nil or rounded to zero. .. Not applicable.

(b) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the *Information Papers ABS Views on Remoteness, 2001* (Cat. no. 1244.0) and *Outcomes of ABS Views on Remoteness Consultation, Australia* (Cat. no. 1244.0.00.001).

(c) Includes 'major cities', inner regional' and 'outer regional' categories of the ASGS.

(d) Includes 'remote' and 'very remote' categories of the ASGS.

(a) Estimates with a relative standard error (RSE) of between 25 and 50 per cent and should be used with caution. A 95 per cent confidence interval (CI) are reported against each estimate.

(b) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(c) Includes 'remote' and 'very remote' categories of the ASGS.

TABLE 8A.1.20

Table 8A.1.20 **Reasons for not going to a dentist in the last 12 months, Indigenous people aged 18 years and over, by remoteness, 2004-05 and 2012-13 (a), (b)**

<i>Remote (c)</i>				<i>Non-Remote (d)</i>				<i>Total</i>			
<i>'000</i>	<i>Rate (%)</i>	<i>RSE (%)</i>	<i>95% CI (±)</i>	<i>'000</i>	<i>Rate (%)</i>	<i>RSE (%)</i>	<i>95% CI (±)</i>	<i>'000</i>	<i>Rate (%)</i>	<i>RSE (%)</i>	<i>95% CI (±)</i>

(d) Includes 'major cities', inner regional' and 'outer regional' categories of the ASGS.

(e) Includes: too busy (work, personal or family responsibilities), discrimination, service not culturally appropriate, language problems, dislikes service or health professional, afraid, embarrassed, does not trust the hospital, or felt service would be inadequate.

(f) Includes transport/distance, service not available in area, waiting time too long, or service not available at the time required.

(g) Components may not add to total as people may have reported more than one reason for not going to a dentist.

– Nil or rounded to zero.

DTP = diphtheria, tetanus, pertussis. HIB = Haemophilus influenzae type b. MMR = measles, mumps, rubella.

(a) Three-month cohort, for cohort born between 1 July and 30 September 2004. From 2008, fully vaccinated status for 5 year olds is reported in place of that for 6 year olds, owing to changes to Australian Childhood Immunisation Register reporting practices.

(b) Children aged 5 years do not receive a HIB or Hepatitis B vaccine.

**na** not available.

DTP = diphtheria, tetanus, pertussis. HIB = Haemophilus influenzae type b. MMR = measles, mumps, rubella.

- (a) Three-month cohort, for cohort born between 1 July and 30 September 2001.
- (b) Data from the ACT, Queensland and Tasmania have not been included in this measure because Indigenous status data from these jurisdictions' service providers are not routinely reported or transferred to the Australian Childhood Immunisation Register.
- (c) Data for these five states and territories should not be assumed to represent the immunisation experience in the other jurisdictions.

**na** Not available.

(a) Refers to recurrent expenditure on health services for Indigenous and non-Indigenous Australians and includes funding from multiple government and non-government sources, including private health insurance. Excludes expenditure on health administration, health expenditure not elsewhere included and research.

(b) Primary health services include public and community health services and those flowing from a patient-initiated contact (general practitioner consultations, hospital emergency attendances, general practitioner ordered investigations and prescriptions, over the counter medicines etc.). Secondary/tertiary services involve a referral within the health system or a hospital admission.

.. Not applicable.

TABLE 8A.2.1

Table 8A.2.1 **Potentially preventable hospitalisations for chronic conditions, by Indigenous status, 2012-13 (age standardised rate per 100 000 population) (a), (b)**

	<i>Indigenous</i>	<i>Non-Indigenous (c)</i>	<i>Rate ratio (d)</i>
	<i>age-standardised rate per 100 000 population</i>		
2012-13 (all jurisdictions) (e), (f)			
Asthma	299.7	161.9	1.9
Congestive cardiac failure	536.1	200.0	2.7
Diabetes complications	4 476.2	730.8	6.1
Chronic obstructive pulmonary diseases	1 119.3	252.3	4.4
Angina	352.2	111.5	3.2
Iron deficiency anaemia	226.0	145.7	1.6
Hypertension	74.0	33.2	2.2
Nutritional deficiencies	7.4	1.6	4.6
Rheumatic heart disease	65.1	9.7	6.7
<b>Total for potentially preventable chronic conditions (g)</b>	<b>6 712.6</b>	<b>1 549.3</b>	<b>4.3</b>
<b>Total hospitalisations</b>	<b>83 528.3</b>	<b>36 999.3</b>	<b>2.3</b>
<b>Hospitalisations for potentially preventable chronic conditions as a proportion of hospitalisations for all conditions</b>	<b>6.7</b>	<b>4.3</b>	<b>1.6</b>

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). See table 8A.2.17 for the ICD-10-AM codes used to classify potentially preventable conditions.

(b) Directly age-standardised using the Australian 2001 standard population.

(c) Non-Indigenous includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

(d) Rate ratio is the age standardised Indigenous hospitalisation rate divided by other Australians' hospitalisation rate.

(e) Data are reported for public and private hospitals in all jurisdictions.

(f) ICD-10-AM 6th Edition (used for 2008-09 and 2009-10 hospital separation data) and 7th Edition (used for 2010-11 to 2012-13 hospital separation data) include changes to the coding standards applied for additional diagnosis codes which has the greatest impact on the category for 'diabetes complications'. Data are not comparable over time.

(g) The total is not the sum of the individual conditions because diabetes complications overlap other categories.

TABLE 8A.2.2

Table 8A.2.2 **Potentially preventable hospitalisations for chronic conditions, by Indigenous status, 2004-05 to 2012-13 (age standardised rate per 100 000 population) (a), (b)**

	<i>Indigenous</i>	<i>Other (c)</i>	<i>Rate ratio (d)</i>
Rheumatic heart disease	54.4	10.1	5.4
<b>Total for potentially preventable chronic conditions (g)</b>	<b>10 203.2</b>	<b>1 790.9</b>	<b>5.7</b>
<b>Total hospitalisations</b>	<b>63 175.0</b>	<b>34 028.9</b>	<b>1.9</b>
<b>Hospitalisations for potentially preventable chronic conditions as a proportion of hospitalisations for all conditions</b>	<b>12.6</b>	<b>5.4</b>	<b>2.4</b>

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). See table 8A.2.17 for the ICD-10-AM codes used to classify potentially preventable conditions.

(b) Directly age-standardised using the Australian 2001 standard population.

(c) 'Other' includes hospitalisations of non-Indigenous people and those for whom Indigenous status was not stated.

(d) Rate ratio is the age standardised Indigenous hospitalisation rate divided by other Australians' hospitalisation rate.

(e) Data are reported for public and private hospitals in NSW, Victoria, Qld, WA and SA and public hospitals in the Northern Territory, for residents of these jurisdictions.

(f) ICD-10-AM 6th Edition (used for 2008-09 and 2009-10 hospital separation data) and 7th Edition (used for 2010-11 to 2012-13 hospital separation data) include changes to the coding standards applied for additional diagnosis codes which has the greatest impact on the category for 'diabetes complications'. This may affect comparability of these data over time.

(g) The total is not the sum of the individual conditions because diabetes complications overlap other categories.

(h) Data are reported for public and private hospitals in all jurisdictions.

Hypertension	1.0	2.2	2.1
Nutritional deficiencies	2.6	4.2	16.6
Rheumatic heart disease	1.2	3.1	24.4
<b>Total for potentially preventable chronic conditions</b>	<b>3.7</b>	<b>3.5</b>	<b>6.3</b>
<b>Total hospitalisations for all conditions</b>	<b>1.7</b>	<b>2.2</b>	<b>3.8</b>
<b>Hospitalisations for potentially preventable chronic conditions as a proportion of hospitalisations for all conditions</b>	<b>1.8</b>	<b>1.2</b>	<b>1.4</b>

- (a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).
- (b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.
- (c) Rates per 100 000 population are calculated using ABS Estimated 2012 Resident Population by remoteness classification from the 2011 Census (as at 30 June 2011). Rates were directly age standardised to the 2001 Australian population.
- (d) The total is not the sum of the individual conditions because diabetes complications overlap other categories.
- (e) Non-Indigenous includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.
- (f) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

<b>Total (g)</b>	<b>963.3</b>	<b>233.7</b>	<b>4.1</b>

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification) The codes used were E11.x, where x=2 (renal complications), x=3 (ophthalmic complications), x=5 (peripheral circulatory complications), x=7 (multiple complications), x=8 (unspecified complications), x=9 (without complications) x=0, 1, 4, 6 = other specified.

(b) Directly age-standardised using the Australian 2001 standard population.

(c) 'Other' includes hospitalisations of non-Indigenous people and those for whom Indigenous status was not stated.

(d) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the 'other Australians' hospitalisation rate.

(e) Data are reported for public and private hospitals in NSW, Victoria, Qld, WA and SA and public hospitals in the Northern Territory, for residents of these jurisdictions.

(f) Due to changes to the coding standard for type 2 diabetes, the hospitalisation rates of 2010-11 and 2011-12 are not comparable with previous years.

(g) Totals include hospitalisations for unspecified complications.

(h) Data are reported for public and private hospitals in all jurisdictions.

No complications	4.5	3.3	4.6	4.1
<b>Total</b>	<b>3.5</b>	<b>5.3</b>	<b>7.3</b>	<b>5.8</b>

- (a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification) The codes used were E11.x, where x=2 (renal complications), x=3 (ophthalmic complications), x=5 (peripheral circulatory complications), x=7 (multiple complications), x=8 (unspecified complications), x=9 (without complications) x=0, 1, 4, 6 = other specified.
- (b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.
- (c) Rates per 100 000 population are calculated using ABS Estimated 2012 Resident Population by remoteness classification from the 2011 Census (as at 30 June 2011). Rates were directly age standardised to the 2001 Australian population.

TABLE 8A.2.5

**Table 8A.2.5 Hospitalisations for type 2 diabetes mellitus as principal diagnosis by complication, by Indigenous status, by remoteness, 2012-13 (age standardised rate per 100 000 population) (a), (b)**

	<i>Major cities</i>	<i>Inner and Outer Regional combined</i>	<i>Remote and Very Remote combined</i>	<i>Total</i>
(d)	Results for individual complications may be affected by small numbers, particularly for Aboriginal and Torres Strait Islanders, and should be interpreted with caution.			
(e)	The total is not the sum of the individual conditions because diabetes complications overlap other categories.			
(f)	Non-Indigenous includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.			
(g)	Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.			

Source: AIHW National Hospital Morbidity Database (unpublished).

TABLE 8A.2.6

TABLE 8A.2.11

**Table 8A.2.11 Hospitalisations for vaccine preventable conditions, by Indigenous status, by remoteness, 2012-13 (age standardised rate per 100 000 population) (a), (b)**

	<i>Major cities</i>	<i>Inner and Outer Reginal combined</i>	<i>Remote and Very Remote combined</i>
<i>Age-standardised rate per 100 000 population (c)</i>			
Indigenous			
Influenza	185.7	220.2	459.9
Other vaccine-preventable conditions	45.2	46.8	263.3
Non-Indigenous (d)			
Influenza	75.2	79.2	113.6
Other vaccine-preventable conditions	19.1	9.9	12.9
Rate ratio (e)			
Influenza	2.5	2.8	4.0
Other vaccine-preventable conditions	2.4	4.7	20.4

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). See table 8A.2.17 for the ICD-10-AM codes used to classify potentially preventable conditions.

(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.

(c) Rates per 100 000 population are calculated using ABS Estimated 2012 Resident Population by remoteness classification from the 2011 Census (as at 30 June 2011). Rates were directly age standardised to the 2001 Australian population.

(d) 'Non-Indigenous' includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

(e) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

Chlamydial infection (A55–A56)	19.4	2.1	9.1
Other sexually transmitted diseases (A57–A64)	42.6	22.4	1.9

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Includes principal or additional diagnosis.

(b) Directly age-standardised using the Australian 2001 standard population.

(c) 'Other' includes hospitalisations of non-Indigenous people and those for whom Indigenous status was not stated.

(d) Rate ratio is the age standardised Indigenous hospitalisation rate divided by other Australians' hospitalisation rate.

(e) Data are reported for public and private hospitals in NSW, Victoria, Qld, WA and SA and public hospitals in the Northern Territory, for residents of these jurisdictions.

(f) Data are reported for public and private hospitals in all jurisdictions.

(a) External causes (ICD-10-AM codes V00–Y98) are based on the first external cause reported where the principal diagnosis was 'injury, poisoning and certain other consequences of external causes' (ICD-10-AM codes S00–T98). Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Includes principal or additional diagnosis.

(b) Directly age-standardised using the Australian 2001 standard population.

(c) Rate ratio is the age standardised Indigenous hospitalisation rate divided by 'other Australians' hospitalisation rate.

(d) Data are reported for public and private hospitals in NSW, Victoria, Qld, WA and SA and public hospitals in the Northern Territory, for residents of these jurisdictions.

(e) Data are reported for public and private hospitals in all jurisdictions.

(f) Includes separations where no external cause was reported.

- (a) External causes (ICD-10-AM codes V00–Y98) are based on the first external cause reported where the principal diagnosis was 'injury, poisoning and certain other consequences of external causes' (ICD-10-AM codes S00–T98). Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Includes principal or additional diagnosis.
- (b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.
- (c) Rates per 100 000 population are calculated using ABS Estimated 2012 Resident Population by remoteness classification from the 2011 Census (as at 30 June 2011). Rates were directly age standardised to the 2001 Australian population.
- (d) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

TABLE 8A.3.1

Table 8A.3.1 **Age standardised avoidable mortality death rates, by Indigenous status, State and Territory of usual residence, persons aged 0–74 years, 2008–2012 (a), (b), (c), (d), (e), (f), (g), (h), (i)**

State/Territory	Number of deaths			Rate per 100 000 (j)		Variability bands ( $\pm$ )		Rate ratio (k)
	Indigenous	Non-Indigenous	Not stated	Indigenous	Non-Indigenous	Indigenous	Non-Indigenous	
NSW	1 725	51 399	524	304.1	143.5	34.9	2.8	2.1
Qld	1 898	32 373	964	399.0	152.0	45.8	3.8	2.6
WA	1 468	14 684	334	628.0	135.6	84.3	5.0	4.6
SA	470	12 439	105	435.7	146.1	96.7	5.8	3.0
NT	1 518	1 181	7	788.9	174.5	101.1	23.8	4.5
<b>NSW, Qld, WA, SA, and the NT</b>	<b>7 079</b>	<b>112 076</b>	<b>1 934</b>	<b>442.7</b>	<b>145.3</b>	<b>25.8</b>	<b>1.9</b>	<b>3.0</b>

- (a) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Indigenous identification in mortality data for these periods. Data for these five jurisdictions over-represent Indigenous populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions.
- (b) This table presents data for Avoidable Mortality as defined in the National Healthcare Agreement (Indicator P-16).
- (c) Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (d) Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and non-Indigenous mortality rates because of these data quality issues.
- (e) These data exclude 1934 registered deaths where the Indigenous status was not stated for these causes of death, over the period 2008-2012.
- (f) All causes of death data from 2007 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised) and 2012 (preliminary). See Cause of Death, Australia, 2012 (cat.no. 3303.0) Explanatory Notes for further information.
- (g) Care should be taken when interpreting mortality rates for Queensland due to recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators.
- (h) Aboriginal and Torres Strait Islander data for Western Australia were not published in Causes of Death, Australia, 2010 (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in Causes of Death, Australia, 2010 (cat. no. 3303.0). This adjusted data has been included in this table.

TABLE 8A.3.1

Table 8A.3.1 **Age standardised avoidable mortality death rates, by Indigenous status, State and Territory of usual residence, persons aged 0–74 years, 2008–2012 (a), (b), (c), (d), (e), (f), (g), (h), (i)**

<i>State/Territory</i>	<i>Number of deaths</i>			<i>Rate per 100 000 (j)</i>		<i>Variability bands (<math>\pm</math>)</i>		<i>Rate ratio (k)</i>
	<i>Indigenous</i>	<i>Non-Indigenous</i>	<i>Not stated</i>	<i>Indigenous</i>	<i>Non-Indigenous</i>	<i>Indigenous</i>	<i>Non-Indigenous</i>	

- (i) Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census-based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.
- (j) Directly age-standardised death rates per 100 000, using the 2001 Australian standard population, by 5-year age group. See the 'Standard Population for Use in Australian-Standardisation Table' data cube in Australian Demographic Statistics, Dec 2012 (cat. no. 3101.0).
- (k) Rate ratio is the mortality rate for Indigenous Australians divided by the mortality rate for non-Indigenous Australians.

*Source:* ABS (2014) Causes of Death, Australia, 2012 cat. no. 3303.0; ABS (2014) Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026, cat. no. 3238.0

TABLE 8A.3.2

Table 8A.3.2 **Age standardised avoidable mortality death rates, by Indigenous status, State and Territory of usual residence, persons aged 0–74 years, 2003–2007 (a), (b), (c), (d), (e)**

State/Territory	Number of deaths			No. per 100 000 (f)		Variability bands ( $\pm$ )		Rate ratio (g)
	Indigenous	Non-Indigenous	Not stated	Indigenous	Non-Indigenous	Indigenous	Non-Indigenous	
NSW	1 501	52 216	832	321.9	163.3	40.3	3.1	2.0
Qld	1 763	30 459	533	469.4	168.5	56.3	4.3	2.8
WA	1 231	13 802	252	628.7	150.1	90.1	5.6	4.2
SA	451	12 942	268	485.5	167.7	109.4	6.5	2.9
NT	1 496	1 166	16	863.7	223.1	113.3	32.4	3.9
<b>NSW, Qld, WA, SA, and the NT</b>	<b>6 442</b>	<b>110 585</b>	<b>1 901</b>	<b>484.3</b>	<b>163.8</b>	<b>29.9</b>	<b>2.2</b>	<b>3.0</b>

- (a) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Indigenous identification in mortality data for these periods. Data for these five jurisdictions over-represent Indigenous populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions.
- (b) This table presents data for Avoidable Mortality as defined in the National Healthcare Agreement (Indicator P-16).
- (c) Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (d) Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and non-Indigenous mortality rates because of these data quality issues.
- (e) Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.
- (f) Directly age-standardised death rates per 100 000, using the 2001 Australian standard population, by 5-year age group. See the 'Standard Population for Use in Australian-Standardisation Table' data cube in Australian Demographic Statistics, Dec 2012 (cat. no. 3101.0).
- (g) Rate ratio is the mortality rate for Indigenous Australians divided by the mortality rate for non-Indigenous Australians.
- Source: ABS (2014) Causes of Death, Australia, 2012 cat. no. 3303.0; ABS (2014) Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026, cat. no. 3238.0

TABLE 8A.3.3

Table 8A.3.3      **Age-standardised mortality rates of potentially avoidable deaths, under 75 years, by Indigenous status, NSW, Queensland, WA, SA, NT, 2008–2012 (a), (b), (c), (d), (e), (f), (g)**

	<i>unit</i>	<i>NSW</i>	<i>Qld (h)</i>	<i>WA (i)</i>	<i>SA</i>	<i>NT</i>	<i>Total (j)</i>
Number of deaths	no.	51 399	32 373	14 684	12 439	1 181	112 076
Rate	per 100 000	143.5	152.0	135.6	146.1	174.5	145.3
Variability band	±	2.8	3.7	4.9	5.8	23.8	1.9

- (a) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised), 2012 (preliminary). See Cause of Death, Australia, 2010 (cat. no. 3303.0) Explanatory Notes 35-39 and Technical Notes, Causes of Death Revisions, 2006 and Causes of Death Revisions, 2008 and 2009.
- (b) Age-standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 1000 or 100 000 persons. SDRs in this table have been calculated using the direct method, age-standardised by 5 year age groups to less than 75 years.
- (c) Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census-based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.
- (d) Avoidable mortality has been defined in the Public Health Information Development Unit's report, Australian and New Zealand Atlas of Avoidable Mortality (2006), and in reports by NSW Health and Victorian Department of Human Services as mortality before the age of 75 years, from conditions which are potentially avoidable within the present health system.
- (e) Data are presented in five-year groupings due to the volatility of small numbers each year.
- (f) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.
- (g) Data are reported by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. Only these five states and territories have evidence of a sufficient level of Indigenous identification and sufficient numbers of Indigenous deaths to support mortality analysis.
- (h) Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. See data quality statements for a more detailed explanation.

TABLE 8A.3.3

Table 8A.3.3      **Age-standardised mortality rates of potentially avoidable deaths, under 75 years, by Indigenous status, NSW, Queensland, WA, SA, NT, 2008–2012 (a), (b), (c), (d), (e), (f), (g)**

	<i>unit</i>	<i>NSW</i>	<i>Qld (h)</i>	<i>WA (i)</i>	<i>SA</i>	<i>NT</i>	<i>Total (j)</i>
(i)	Aboriginal and Torres Strait Islander data for Western Australia were not published in Causes of Death, Australia, 2010 (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in Causes of Death, Australia, 2010 (cat. no. 3303.0). This adjusted data has been included in this table.						
(j)	Some totals and figures may not compute due to the effects of rounding.						
(k)	Preventable deaths are those which are amenable to screening and primary prevention such as immunisation, and reflecting the effectiveness of the current preventative health activities of the health sector.						
(l)	Deaths from potentially treatable conditions are those which are amenable to therapeutic interventions, and reflecting the safety and quality of the current treatment system.

(a) Age-standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 1000 or 100 000 persons. SDRs in this table have been calculated using the direct method, age-standardised by 5 year age groups to less than 75 years.

(a) Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.

(b) Avoidable mortality has been defined in the Public Health Information Development Unit's report, Australian and New Zealand Atlas of Avoidable Mortality (2006), and in reports by NSW Health and Victorian Department of Human Services as mortality before the age of 75 years, from conditions which are potentially avoidable within the present health system.

(c) Data are presented in five-year groupings due to the volatility of small numbers each year.

(d) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

(e) Data are reported by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. Only these five states and territories have evidence of a sufficient level of Indigenous identification and sufficient numbers of Indigenous deaths to support mortality analysis.

(f) Aboriginal and Torres Strait Islander data for Western Australia were not published in Causes of Death, Australia, 2010 (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in Causes of Death, Australia, 2010 (cat. no. 3303.0). This adjusted data has been included in this table.

(g) Some totals and figures may not compute due to the effects of rounding.

(h) Preventable deaths are those which are amenable to screening and primary prevention such as immunisation, and reflecting the effectiveness of the current preventative health activities of the health sector.

TABLE 8A.3.4

Table 8A.3.4      **Age-standardised mortality rates of potentially avoidable deaths, under 75 years, by Indigenous status, NSW, Queensland, WA, SA, NT, 2003–2007 (a), (b), (c), (d), (e)**

65–74	2 404.2	1 054.1	2.3	1 851.2	624.5	3.0	2 103.2	837.3	2.5
<b>Total (i), (j)</b>	<b>289.0</b>	<b>199.6</b>	<b>1.4</b>	<b>203.5</b>	<b>116.4</b>	<b>1.7</b>	<b>246.2</b>	<b>158.3</b>	<b>1.6</b>

- (a) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Indigenous identification in mortality data for these periods. Data for these five jurisdictions over-represent Indigenous populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions.
- (b) All causes of death data from 2007 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008–2010 (final), 2011 (revised) and 2012 (preliminary). See Cause of Death, Australia, 2012 (cat.no. 3303.0) Explanatory Notes for further information.
- (c) Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (d) Avoidable mortality causes are listed in table 8A.3.11.

TABLE 8A.3.5

Table 8A.3.5 **Avoidable mortality, by Indigenous status, age group and sex, persons aged 0–74 years, NSW, Queensland, WA, SA and the NT, 2008–2012 (a), (b), (c), (d), (e), (f), (g)**

	Males			Females			Persons		
	<i>Deaths per 100 000</i>			<i>Deaths per 100 000</i>			<i>Deaths per 100 000</i>		
<i>Age group (years)</i>	<i>Indigenous</i>	<i>Non-Indigenous</i>	<i>Rate ratio (h)</i>	<i>Indigenous</i>	<i>Non-Indigenous</i>	<i>Rate ratio (h)</i>	<i>Indigenous</i>	<i>Non-Indigenous</i>	<i>Rate ratio (h)</i>

(e) Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and non-Indigenous mortality rates because of these data quality issues.

(f) These data exclude 1934 registered deaths where the Indigenous status was not stated over the period 2008-2012.

(g) Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.

(h) Rate ratio is the mortality rate for Indigenous Australians divided by the mortality rate for non-Indigenous Australians.

(i) Totals exclude those aged 75 years and over.

(j) Total rate is directly age-standardised death rates per 100,000, using the 2001 Australian Estimated Resident population, by 5-year age group.

55–64	1 358.3	469.4	2.9	970.2	268.5	3.6
65–74	2 944.4	1 294.8	2.3	1 979.1	713.2	2.8
<b>Total (i)</b>	<b>305.0</b>	<b>217.5</b>	<b>1.4</b>	<b>196.6</b>	<b>122.4</b>	<b>1.6</b>

- (a) Avoidable mortality causes are listed in table 8A.3.11.
- (b) Data are presented in five-year groupings due to the volatility of small numbers each year.
- (c) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.
- (d) Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.
- (e) Data are reported for NSW, Queensland, WA, SA and the NT only. These five jurisdictions are considered to have adequate levels of Indigenous identification in mortality data. They do not represent an Australian total.
- (f) Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. The completeness of identification of Indigenous deaths can vary by age.
- (g) The avoidable mortality classification includes some causes for only specific age groups. They are: childhood vaccine-preventable diseases (0-14 years), asthmas (0-44 year) and chronic obstructive pulmonary disease (45-74 years). These causes have been included in only the relevant age groups and the subsets included in the total.
- (h) Rate ratio is the Indigenous rate divided by the non-Indigenous rate.
- (i) Totals exclude those aged 75 years and over and those for whom age was not stated.

(a) Avoidable mortality causes are listed in table 8A.3.11.

TABLE 8A.3.7

Table 8A.3.7 **Avoidable mortality, by cause of death and Indigenous status, persons aged 0–74 years, NSW, Queensland, WA, SA and the NT, 2008–2012 (a), (b), (c), (d), (e), (f), (g)**

Cause of death	Number				Per cent			No. per 100 000 (h)	
	Indig.	Non-Indig.	Not stated	Total	Indig.	Non-Indig.	Not stated	Indig.	Non-Indig. Ratio (i)
(b)	Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Indigenous identification in mortality data for these periods. Data for these five jurisdictions over-represent Indigenous populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions.								
(c)	Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.								
(d)	Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and non-Indigenous mortality rates because of these data quality issues.								
(e)	These data exclude 1839 registered deaths where the Indigenous status was not stated for these causes of death, over the period 2008-2012.								
(f)	All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised) and 2012 (preliminary). See Cause of Death, Australia, 2012 (cat.no. 3303.0) Explanatory Notes for further information.								
(g)	Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.								
(h)	Directly age-standardised death rates per 100,000, using the 2001 Australian standard population, by 5-year age group. See the 'Standard Population for Use in Australian-Standardisation Table' data cube in Australian Demographic Statistics, Dec 2012 (cat. no. 3101.0).								
(i)	Rate ratio is the mortality rate for Indigenous Australians divided by the mortality rate for non-Indigenous Australians.								
(j)	Other includes all avoidable mortality not specifically detailed in the table.

(a) Avoidable mortality causes are listed in table 8A.3.11.

(b) Causes of death data for 2006 and 2007 have undergone two years of revisions and are now final. See ABS Causes of Death, Australia, 2012 (Cat. no. 3303.0) Technical Note: Causes of Death Revisions, and Explanatory Notes 28–32.

(c) Data are presented in five-year groupings due to the volatility of small numbers each year.

TABLE 8A.3.8

Table 8A.3.8      **Avoidable mortality, by cause of death and Indigenous status, persons aged 0–74 years, NSW, Queensland, WA, SA and the NT, 2003–2007 (a), (b), (c), (d), (e), (f), (g), (h), (i)**

Cause of death	Number				Per cent			No. per 100 000 (j), (k)		Rate ratio (l)
	Indig.	Non-Indig.	Not stated	Total	Indig.	Non-Indig.	Not stated	Indig.	Non-Indig.	
(d)	Deaths are by year of registration of death and State/Territory of usual residence.									
(e)	Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.									
(f)	Data are reported for NSW, Queensland, WA, SA and the NT only. These five jurisdictions are considered to have adequate levels of Indigenous identification in mortality data. They do not represent an Australian total.									
(g)	Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is difficult to estimate the difference between the Indigenous and non-Indigenous mortality rates because of these data quality issues.									
(h)	Different causes of death may have levels of completeness of identification that differ from the all-cause under-identification (coverage) estimates.									
(i)	Data cells with small values have been randomly assigned to protect the confidentiality of individuals. As a result, some totals will not equal the sum of their components. It is important to note that cells with a zero. value have not been affected by confidentialisation.									
(j)	Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.									
(k)	Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.									
(l)	Rate ratio is the Indigenous rate divided by the non-Indigenous rate.

% change (k)	– 29.4	– 24.5	– 27.4	– 40.7	– 32.1	– 37.6	0.7	0.8	0.7	- 11.3	- 7.6	- 10.2

(a) Avoidable mortality causes are listed in table 8A.3.11.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2006-2010 (final), 2011 (revised), 2012 (preliminary). See Explanatory Notes 29-33 and Technical Notes, Causes of Death Revisions, 2006 in Causes of Death, Australia, 2010 (cat. 3303.0) and Causes of Death Revisions, 2010 and 2011 in Causes of Death, Australia, 2012 (cat. 3303.0).

(c) Data based on reference year. See data quality statements for a more detailed explanation.

(d) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

(e) Data are reported for NSW, Queensland, WA, SA and the NT only. These five jurisdictions are considered to have adequate levels of Indigenous identification in mortality data. They do not represent an Australian total.

(f) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by 5 year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.

TABLE 8A.3.9

Table 8A.3.9     **Age-standardised mortality rates, rate ratios and rate differences, avoidable causes, persons aged 0–74 years, NSW, Queensland, WA, SA, and the NT, 1998 to 2012 (a), (b), (c), (d), (e), (f), (g)**

	<i>Indigenous rate (per 100 000)</i>	<i>Non-Indigenous rate (per 100 000)</i>	<i>Rate ratio (h)</i>	<i>Rate difference (i)</i>
<p>(g) Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.</p> <p>(h) Rate ratio is the rate for Indigenous people divided by the rate for non-Indigenous people.</p> <p>(i) Rate difference is the rate for Indigenous people minus the rate for non-Indigenous people.</p> <p>(j) Average annual change in rates, rate ratios, and rate differences determined using linear regression analysis.</p> <p>(k) Per cent change between 1998 and 2012 based on the average annual change over the period.</p> <p>.. Not applicable.</p>

<b>Total mortality</b>	<b>9 438</b>	<b>169 111</b>	<b>2 712</b>	<b>592.9</b>	<b>218.7</b>	<b>2.7</b>

- (a) This table presents data for Avoidable Mortality as defined in the National Healthcare Agreement (Indicator P-16). It presents primary, secondary and tertiary weighted data as defined in table 3 of the 2005 Report of the New South Wales Chief Health Officer.
- (b) Data are reported for New South Wales, Queensland, Western Australia, South Australia and the Northern Territory only. These five states and territories are currently considered to have adequate levels of Indigenous identification in mortality data for these periods. Data for these five jurisdictions over-represent Indigenous populations in less urbanised and more remote locations. Mortality data for the five jurisdictions should not be assumed to represent the experience in the other jurisdictions.
- (c) Data are presented in 5-year groupings because of small numbers each year. For rate calculations, the numerator is the average of the total number of deaths and the denominator is the mid-point of the population for the time period.
- (d) Although most deaths of Indigenous Australians are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these statistics are likely to underestimate the Indigenous mortality rate. It is also difficult to exactly identify the difference between the Indigenous and non-Indigenous mortality rates because of these data quality issues.
- (e) These data exclude 2712 registered deaths where the Indigenous status was not stated for these causes of death, over the period 2008-2012.
- (f) All causes of death data from 2007 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised) and 2012 (preliminary). See Cause of Death, Australia, 2012 (cat.no. 3303.0) Explanatory Notes for further information.
- (g) Indigenous and non-Indigenous population estimates are available for census years only. In the intervening years, Indigenous population figures are derived from assumptions about past and future levels of fertility, mortality and migration. In the absence of non-Indigenous population figures for these years, it is possible to derive denominators for calculating non-Indigenous rates by subtracting the projected Indigenous population from the total population. In the present table, non-Indigenous population estimates have been derived by subtracting the 2011 Census-based Indigenous population projections from the 2011 Census based total persons estimated resident population (ERP). Such figures have a degree of uncertainty and should be used with caution, particularly as the time from the base year of the projection series increases.
- (h) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. See the 'Standard Population for Use in Australian-Standardisation Table' data cube in Australian Demographic Statistics, Dec 2012 (cat. no. 3101.0) for the ABS standard population. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.
- (i) Rate ratio is the mortality rate for Indigenous Australians divided by the mortality rate for non-Indigenous Australians.

Fires, burns	X00–X09			X
Accidental poisonings	X40–X49			X
Drownings	W65–W74			X
War	Y36			X
<b>Intentional injuries</b>				
Suicide and self-inflicted injuries	X60–X84, Y87.0, Y10–Y34			X
Violence	X85–Y09, Y87.1			X
<b>Other conditions</b>				
Nutritional deficiency anaemia	D50–D53			X
Thyroid disorders	E00–E07		X	
Adrenal disorders	E24, E27		X	
Congenital metabolic disorders	E25, E70.0, E74.2		X	
Osteomyelitis and other osteopathies of bone	M86, M89–M90			X
Complications of pregnancy, labour or the puerperium	O01–O99			X
Misadventures to patients during surgical and medical care	Y60–Y69			X
Medical devices associated with adverse incidents in diagnostic & therapeutic use	Y70–Y82			X
Surgical and other medical procedures as the cause of abnormal reaction of the patient, or of later complication, without mention of misadventure at the time of the procedure	Y83–Y84			X

**ICD-10** = International Statistical Classification of Diseases and Related Health Problems, 10th Revision. **HIV/AIDS** = Human Immunodeficiency Virus/Acquired Immune Deficiency Syndrome. **COPD** = Chronic Obstructive Pulmonary Disease.

(a) Potentially preventable deaths are those amenable to screening and primary prevention such as immunisation.

(b) Potentially treatable deaths are those amenable to therapeutic interventions

--	-------------	------------	------------	------------	-----------	-----------	------------	------------	-----------	-------------

(b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

(c) Data for Indigenous people are from the 2008 National Aboriginal and Torres Strait Islander Social Survey.

(d) Data for non-Indigenous people are from the 2007-08 National Health Survey and data was not collected in very remote areas.

(e) Rate ratio is the age standardised Indigenous proportion divided by the age standardised non-Indigenous proportion.

(f) Rate difference is the age standardised Indigenous proportion less the age standardised non-Indigenous proportion.

- (a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate.
- (b) This refers to smoking of tobacco, including manufactured (packet) cigarettes, roll-your-own cigarettes, cigars and pipes, but excludes chewing tobacco and smoking of non-tobacco products. Current daily smokers refers to people who smoked one or more cigarettes (or pipes or cigars) per day at the time of interview.

TABLE 8A.4.12

Table 8A.4.12 **Age standardised hospital separations related to tobacco use, by Indigenous status and by sex, 2004-05 to 2012-13 (age standardised rate per 100 000 population) (a), (b), (c), (d)**

	<i>Males</i>		<i>Females</i>		<i>Persons</i>	
	<i>Indigenous</i>	<i>Other (e)</i>	<i>Indigenous</i>	<i>Other (e)</i>	<i>Indigenous</i>	<i>Other (e)</i>
ACT (h)	–	57.7	–	37.7	–	46.8

(a) The ICD-10-AM codes used were F17 (Mental and behavioural disorders due to tobacco use), P04.2 (Fetus and newborn affected by maternal use of tobacco), and T65.2 (Toxic effect of tobacco and nicotine) in any diagnosis field. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).

(b) Data are reported by State or Territory of usual residence of the patient hospitalised.

(c) Jurisdictional-level data exclude separations from private hospitals in the NT, ACT and Tasmania

(d) Directly age-standardised using the Australian 2001 standard population.

(e) Other' includes hospitalisation of non-Indigenous people and those for whom Indigenous status was not stated.

(f) Data for six-jurisdictional total exclude separations from private hospitals in the Northern Territory.

(g) Total Australia data include separations from public and private hospitals in all jurisdictions.

(h) Data for Tasmania and ACT should be interpreted with caution as the quality of Indigenous identification for these years was not considered adequate.

**np** Not published. - Nil or rounded to zero.

*Source:* AIHW National Hospital Morbidity Database (unpublished).

TABLE 8A.4.13

**Table 8A.4.13 Hospital separations related to tobacco use, by Indigenous status and remoteness, 2012-13 (age standardised rate per 100 000 population) (a), (b), (c), (d), (e), (f)**

	<i>Indigenous</i>	<i>Non-Indigenous (g)</i>	<i>Rate difference</i>	<i>Rate ratio</i>
Major cities	642.7	140.6	502.1	4.6
Inner and outer regional	479.0	136.9	342.1	3.5
Remote and Very remote	449.0	106.1	342.9	4.2

(a) Data are from public and private hospitals.

(b) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).

(c) Data are reported by State or Territory of usual residence of the patient hospitalised. Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.

(d) Hospital separation is the discharge, transfer, death or change of episode of care of an admitted patient (see glossary for a detailed definition).

(e) Rates per 100 000 population are calculated using ABS Estimated Resident Population by remoteness classification from the 2011 Census (as at 30 June 2011). Rates were directly age standardised to the 2001 Australian population.

(f) Hospitalisations for which the Indigenous status of the patient was not reported are excluded from this analysis, apart from Western Australia where records with an unknown status are included in non-Indigenous.

(g) Non-Indigenous includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

TABLE 8A.5.7

Table 8A.5.7      **Rates for BMI categories for persons aged 18 years and over, by State and Territory, 2004-05 (age standardised rate per 100 population) (a), (b), (c), (d)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
95 per cent confidence intervals for rates										
Underweight (BMI less than 18.5)	±	0.5	0.5	0.6	0.7	0.6	0.6	1.1	8.3	0.3
Normal weight (BMI 18.5–24.9)	±	1.7	1.7	2.1	2.8	1.7	2.6	3.3	10.4	0.9
Overweight (BMI 25.0–29.9)	±	1.8	1.9	1.7	2.5	2.0	2.7	3.0	13.7	0.9
Obese (BMI over 30.0)	±	1.2	1.5	1.7	2.0	1.6	2.3	2.0	7.8	0.7

(a) Rates are age standardised to the 2001 population.

(b) Population excludes persons for whom BMI could not be calculated.

(c) Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution.

(d) 2004-05 data are based on self-reported BMI and are not comparable to 2012-13 data which are based on measured BMI.

(e) Data for Indigenous people are from the National Aboriginal and Torres Strait Islander Health Survey.

(f) Data for non-Indigenous people are from the National Health Survey.

(a) Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution.

(b) The National Health and Medical Research Council (NHMRC) recommends that children aged 4–7 eat 2 serves of vegetables or legumes and 1 serve of fruit daily, children aged 8–11 eat 3 serves of vegetables or legumes and 1 serve of fruit daily and children aged 12–18 eat 4 serves of vegetables and 3 serves of fruit daily. Data for 'meets recommended daily intake' therefore exclude children who said they do not eat fruit and/or vegetables daily.

**Table 8A.5.15 Usual daily intake of fruit and vegetables: children aged 5–14 years in non-remote areas, by Indigenous status, 2008 (a), (b)**

	<i>Indigenous</i>					<i>Non-Indigenous</i>

(c) In the 2007-08 NHS, respondents were not asked whether they (or their child) ate fruit and/or vegetables on a daily basis. For this reason, data presented are for number of serves usually eaten each day.

(d) Comprises children who usually eat vegetables on one or more days per week.

(e) Comprises children who usually eat fruit on one or more days per week.

(f) Exceeds NHMRC guidelines for 5–7 year olds and 8–11 year olds.

(g) Includes children for whom information about fruit and/or vegetable intake was not known.

– Nil or rounded to zero.

- (a) Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution.
- (b) The National Health and Medical Research Council (NHMRC) recommends that children aged 4–7 years eat 2 serves of vegetables or legumes and 1 serve of fruit daily, children aged 8–11 years eat 3 serves of vegetables or legumes and 1 serve of fruit daily, and those aged 12–18 years eat 4 serves of vegetables and 3 serves of fruit daily.
- (c) Comprises: children who usually eat vegetables, but not daily; and those who do not usually eat vegetables.
- (d) Data about number of serves are not available for children in remote areas.
- (e) Comprises: children aged 5–7 years who usually eat 2 or more serves of vegetables daily; children aged 8–11 years who usually eat 3 or more serves of vegetables daily; and children aged 12–14 years who usually eat 4 or more serves of vegetables daily.
- (f) Comprises: children aged 5–7 years who usually eat less than 2 serves of vegetables daily; children aged 8–11 years who usually eat less than 3 serves of vegetables daily; and children aged 12–14 years who usually eat less than 4 serves of vegetables daily.
- (g) Comprises 39 900 (22 per cent) children who were aged 1 to 3 years and who are not included in NHMRC's recommendations about dietary intake.
- (h) Comprises: children who usually eat fruit, but not daily; and those who don't usually eat fruit.

Table 8A.5.17 **Fruit and vegetable intake for Indigenous children aged 1–14 years, by remoteness, 2008 (a)**

	<i>Unit</i>	<i>Non-remote</i>	<i>Remote</i>	<i>Aust.</i>
(i)	Comprises: children aged 5–11 years who usually eat 2 or more serves of fruit daily; and children aged 12–14 years who usually eat 3 or more serves of fruit daily.			
(j)	Comprises: children aged 5–11 years who usually eat less than 2 serves of fruit daily; and children aged 12–14 years who usually eat less than 3 serves of fruit daily.			
(k)	Includes children for whom information about fruit and/or vegetable intake was not known.			
<b>na</b> Not available. – Nil or rounded to zero.

TABLE 8A.6.10

Table 8A.6.10 **Potentially preventable hospitalisations for dental conditions, by Indigenous status, 2004-05 to 2012-13 (age standardised rate per 1000 population) (a), (b)**

	NSW, Victoria, Queensland, WA, SA and the NT (c)		All jurisdictions (d)		
	Indigenous	Other (e)	Indigenous	Other (e)	Non-Indigenous (f)
2012-13	3.6	2.8	3.5	2.8	2.7
2011-12	3.6	2.8	3.5	2.8	na
2010-11	3.4	2.8	3.3	2.8	na
2009-10	2.8	2.8	na	na	na
2008-09	3.0	2.8	na	na	na
2007-08	2.8	2.8	na	na	na
2006-07	2.5	2.7	na	na	na
2005-06	2.4	2.7	na	na	na
2004-05	2.3	2.6	na	na	na

(a) Principal diagnosis for ICD-10-AM codes K02, K03, K04, K05, K06, K08, K09.8, K09.9, K12 and K13. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases 10th Edition, Australian Modification).

(b) Hospitalisation rates are directly age standardised using the 2001 Australian population.

(c) Data are reported for public and private hospitals in NSW, Victoria, Qld, WA and SA and public hospitals in the Northern Territory, for residents of these jurisdictions.

(d) Data are reported for public and private hospitals in all jurisdictions.

(e) Other includes hospitalisations identified as not Indigenous as well as those with a 'not stated' Indigenous status.

(f) Non-Indigenous includes hospitalisations identified as not Indigenous and for WA only also those with a 'not stated' Indigenous status.

**na** Not available.

TABLE 8A.6.11

**Table 8A.6.11 Potentially preventable hospitalisations for dental conditions, by Indigenous status and remoteness, 2012-13 (age standardised rate per 1000 population) (a), (b), (c), (d), (e)**

	<i>Indigenous</i>	<i>Non-Indigenous (f)</i>
Major cities	2.4	2.6
Inner and outer regional	3.3	3.0
Remote and very remote	5.8	2.8

(a) Data are from public and private hospitals in all jurisdictions.

(b) Principal diagnosis for ICD-10-AM codes K02, K03, K04, K05, K06, K08, K09.8, K09.9, K12 and K13. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases 10th Edition, Australian Modification).

(c) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(d) Hospitalisation rates are directly age standardised using the 2001 Australian population.

(e) Hospitalisations for which the Indigenous status of the patient was not reported are excluded from this analysis, apart from Western Australia where records with an unknown status are included in non-Indigenous.

(f) Non-Indigenous includes hospitalisations identified as not Indigenous and for WA only also those with a 'not stated' Indigenous status.

Source: AIHW (unpublished) National Hospital Morbidity Database.

TABLE 8A.6.12

**Table 8A.6.12 Dental hospitalisations for children aged 0–14 years, by Indigenous status, by age, 2012-13 (rate per 1000 children) (a), (b), (c)**

	<i>Indigenous</i>	<i>Non-Indigenous (d)</i>	<i>Rate ratio (e)</i>
Age-group			
Less than 5 years	8.4	4.9	1.7
5–9 years	12.2	9.8	1.2
10–14 years	3.0	5.9	0.5
Total 0–14 years	7.9	6.9	1.2

(a) Separations are for dental procedures (extraction, restoration, pulpal, other) under general anaesthetic based on ACHI classification (Australian Classification of Health Interventions). For a list of procedure codes used see table 8A.6.16. While it is possible for multiple procedures to occur within a single separation, for this table each separation has been counted only once.

(b) Rates are per 1000 population of children aged 0–14 years.

(c) Data are reported for public and private hospitals in all jurisdictions.

(d) Non-Indigenous includes hospitalisations identified as not Indigenous and for WA only also those with a 'not stated' Indigenous status.

(e) Rate ratio is the Indigenous rate divided by rate for non-Indigenous people.

Source: AIHW (unpublished) National Hospital Morbidity Database.

(a) Separations are for dental procedures (extraction, restoration, pulpal, other) under general anaesthetic based on ACHI classification (Australian Classification of Health Interventions). For a list of procedure codes used see table 8A.6.16. While it is possible for multiple procedures to occur within a single separation, for this table each separation has been counted only once.

(b) Rates are per 1000 population of children aged 0–14 years.

(c) Data are reported for public and private hospitals in NSW, Victoria, Qld, WA and SA and public hospitals in the Northern Territory, for residents of these jurisdictions.

(d) Data are reported for public and private hospitals in all jurisdictions.

(e) Other includes Indigenous status not reported.

(f) The rate ratio is the Indigenous rate divided by rate for Other people.

Source: AIHW (unpublished) National Hospital Morbidity Database.

(a) Dental procedure rates are for separations with a dental procedure recorded under general anaesthetic based on AHCI classification (Australian Classification of Health Interventions). For a list of procedure codes used see table 8A.6.16. While it is possible for multiple procedures to occur within a single separation, in this table each separation counts only once within each procedure type. There may be overlap between categories and the categories should not be summed.

(b) Rates are per 1000 population of children aged 0–14 years

(c) Data are reported for public and private hospitals in NSW, Victoria, Qld, WA and SA and public hospitals in the Northern Territory, for residents of these jurisdictions.

(d) Data are reported for public and private hospitals in all jurisdictions.

(e) Other includes Indigenous status not reported.

(f) Indigenous rate divided by rate for Other people.

Source: AIHW (unpublished) National Hospital Morbidity Database.

TABLE 8A.6.15

**Table 8A.6.15 Hospital dental procedure rates for children aged 0–14 years, by Indigenous status and remoteness, 2012-13 (rate per 1000 children) (a), (b), (c), (d), (e)**

	<i>Indigenous</i>	<i>Non-Indigenous (e)</i>	<i>Rate ratio (f)</i>
Major cities			
less than 5 years	5.4	4.7	1.2
5–9 years	7.6	9.6	0.8
10–14 years	2.0	5.8	0.4
Total 0–14 years	5.0	6.6	0.8
Inner and outer regional			
less than 5 years	8.0	5.7	1.4
5–9 years	10.6	10.6	1.0
10–14 years	3.0	6.1	0.5
Total 0–14 years	7.2	7.5	1.0
Remote and very remote			
less than 5 years	15.0	7.6	2.0
5–9 years	23.3	13.1	1.8
10–14 years	4.7	5.2	0.9
Total 0–14 years	14.7	8.8	1.7

(a) Data are from public and most private hospitals in all jurisdictions.

(b) Dental procedure rates are for separations with a dental procedure recorded under general anaesthetic based on ACHI (Australian Classification of Health Interventions). For a list of procedure codes used see table 8A.6.16. While it is possible for multiple procedures to occur within a single separation, for this table each separation has been counted only once.

(c) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(d) Rates are per 1000 population of children aged 0–14 years.

(e) Hospitalisations for which the Indigenous status of the patient was not reported are excluded from this analysis, apart from Western Australia where records with an unknown status are included in non-Indigenous.

(f) Indigenous rate divided by rate for non-Indigenous people.

Source: AIHW (unpublished) National Hospital Morbidity Database.

(a) Levels of psychological distress are derived from the Kessler Psychological Distress Scale (K-5).

(b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

(c) Represents a K5 score of 5–11.

(d) Represents a K5 score of 12–25.

TABLE 8A.7.2

Table 8A.7.2      **K5 level of psychological distress, Indigenous people aged 18 years or over, by State and Territory, 2004-05, 2008 and 2012-13 (a), (b)**

<i>Low/Moderate distress level (c)</i>				<i>High/Very high distress level (d)</i>			
<i>Proportion</i>	<i>RSE</i>	<i>95 per</i>	<i>Rate ratio</i>	<i>Proportion</i>	<i>RSE</i>	<i>95 per</i>	<i>Rate ratio</i>
(%)	(%)	cent CIs	(e)	(%)	(%)	cent CIs	(e)
		(±)				(±)	

(e) The rate ratio is calculated by dividing the age standardised rate for Indigenous people by the corresponding age standardised rate for non-Indigenous people. The rate ratios are not based on the rates included in the table.

(f) Data for the Australian Health Survey 2011-13: data for non-Indigenous people are for 2011-12.

(g) Totals for Indigenous people exclude a small number of people for whom responses were provided by proxy but who were not present at interview.

(h) Totals for non-Indigenous people includes a small number of people for whom levels of psychological distress were unable to be determined.

(i) Remoteness areas were based on the 2011 ASGS. Very remote areas of Australia are out of scope for the National Health Survey 2011-12.

TABLE 8A.7.6

Table 8A.7.6     **K5 level of current psychological distress, by stressor(s) experienced in the last 12 months, Indigenous people aged 18 years or over, 2008 (a), (b)**

	<i>Low/Moderate distress level (c)</i>			<i>High/Very high distress level (d)</i>			<i>Total (e)</i>
	<i>Proportion (%)</i>	<i>RSE (%)</i>	<i>95 per cent CIs (±)</i>	<i>Proportion (%)</i>	<i>RSE (%)</i>	<i>95 per cent CIs (±)</i>	<i>Proportion (%)</i>
Unwelcome at child's school (g)	24.0	26.9	12.6	74.6	8.8	12.9	100.0
<b>Total experienced selected stressor(s)</b>	<b>59.2</b>	<b>2.3</b>	<b>2.7</b>	<b>39.6</b>	<b>3.3</b>	<b>2.6</b>	<b>100.0</b>
No stressor(s) reported	80.6	2.2	3.5	17.0	9.0	3.0	100.0
<b>Total people 18 years or over</b>	<b>66.7</b>	<b>1.5</b>	<b>2.0</b>	<b>31.7</b>	<b>3.1</b>	<b>1.9</b>	<b>100.0</b>

(a) Stressors are those reported by the respondent as having being experienced by themselves, their family or friends.

(b) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

(c) Represents a K5 score of 5–11.

(d) Represents a K5 score of 12–25.

(e) Includes refusals and people with no K5 score.

(f) In the ABS NATSIHS 2004-05 the wording for this item did not contain the words 'retired'.

(g) In the ABS NATSIHS 2004-05 item was not included, and is new to the ABS NATSISS 2008. Consequently these items will not be found in the the 2004-05 data from the NATSIHS survey in previous reports.

(%)	(%)	cent CIs	(%)	(%)	cent CIs	(%)	(%)	cent CIs	(%)	(%)	cent CIs	(%)	(%)	cent CIs
		(±)			(±)			(±)			(±)			(±)

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate.

(b) Relates to the four week period prior to interview.

(c) Includes not known and not stated responses and refusals.

– Nil or rounded to zero.

(a) Relates to feelings in the four week period prior to interview.

(b) Proportions have been age standardised to the 2001 Australian Estimated Resident Population. See Age standardisation in Glossary.

TABLE 8A.7.20

Table 8A.7.20 **Selected indicators of psychological distress, people aged 18 years or over (age standardised) by remoteness, 2011-13 (a), (b), (c)**

	<i>Unit</i>	<i>Major cities</i>	<i>Inner regional</i>	<i>Outer regional</i>	<i>Total non-remote</i>	<i>Remote</i>	<i>Very remote</i>	<i>Total remote</i>
--	-------------	---------------------	-----------------------	-----------------------	-------------------------	---------------	--------------------	---------------------

(c) Proportions with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is reported against each estimate.

(d) Includes 'not known' responses and refusals.

(e) Total for 2012-13 AATSIHS excludes a small number of persons for whom responses were provided by proxy but who were not present at interview.

**na** Not available.

(a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. Estimates with an RSE greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is reported against each estimate.

(b) Relates to the four week period prior to interview.

(c) Data for very remote areas is not available for the non-Indigenous population because it is not considered reliable. Total remote is not comparable between the Indigenous and non-Indigenous population. See glossary for definitions of remoteness areas.

(d) Includes not known and not stated responses and refusals.

**na** Not available.

(a) Data for episodes of community residential care should be interpreted with caution due to the varying quality and completeness of Indigenous identification across jurisdictions.

(b) Queensland does not have any government-operated residential mental health services. Tasmanian information contains data for government-funded residential units operated by the non-government sector in that state, being the only jurisdiction providing this level of reporting. The NT did not have any community residential units in 2005-06.

TABLE 8A.7.25

Table 8A.7.25 **Specialised mental health care reported, by Indigenous status, 2005-06 to 2010-11**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Total</i>
(c)	For NSW, Confused and Disturbed Elderly (CADE) residential mental health services were reclassified as admitted patient hospital services from 1 July 2007. All data relating to these services have been reclassified from 2007–08 onwards. Comparison of NSW data over time therefore should be approached with caution.									
(d)	Includes patients identified as being either of Aboriginal but not Torres Strait Islander origin, Torres Strait Islander but not Aboriginal origin, Aboriginal and Torres Strait Islander origin and patients identified as of Aboriginal or Torres Strait Islander origin.									
(e)	The rates were directly aged standardised against the Australian Estimated Resident Population as at 30 June 2001.									
(f)	The rate ratio is equal to the service use (episodes, contacts or separations) rate for Indigenous Australians divided by the service use rate for non-Indigenous Australians.									
(g)	Data for community mental health service contacts should be interpreted with caution. Across jurisdictions, the data quality and completeness of Indigenous identification varies or is unknown. See <i>Mental Health Services in Australia</i> ( <a href="http://mhsa.aihw.gov.au/home">mhsa.aihw.gov.au/home</a> ) for further information.									
(h)	Includes data for people where Indigenous status was missing or not reported.									
(i)	Admitted patient separations refers to those non-ambulatory separations when a patient undergoes a hospital's formal admission process, completes an episode of care and 'separates' from the hospital, excluding ambulatory-equivalent separations. Separations for which care type was reported as Newborn with no qualified days and records for Hospital boarders and Posthumous organ procurement have been excluded. Comprises separations with and without mental health-related principal diagnoses but with specialised psychiatric care.									
(j)	Interpretation of differences between jurisdictions needs to be undertaken with care as they may reflect different service delivery and admission practices and/or differences in the types of establishments categorised as hospitals.									
(k)	Includes only public hospital separations for the NT.									
(l)	Indigenous status data for NSW, Victoria, Queensland, WA, SA and the NT public hospitals are considered to be of acceptable quality for analytical purposes. Indigenous identification is likely to be incomplete and to vary among jurisdictions. Total includes data for these jurisdictions only.

(a) The ICD-10-AM codes are for principal diagnosis only. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).

(b) Data are reported for public and private hospitals in NSW, Victoria, Qld, WA and SA and public hospitals in the Northern Territory, for residents of these jurisdictions.

(c) Data are reported for public and private hospitals in all jurisdictions.

(d) 'Other' includes hospitalisations of non-Indigenous people and those for whom Indigenous status was not stated.

(e) Includes separations where sex is not stated.

TABLE 8A.7.29

Table 8A.7.29 **Hospitalisation rates for mental and behavioural disorders (ICD–10–AM codes F00–F99), by Indigenous status (age standardised) by State and Territory of residence, by sex, 2012-13 (a), (b), (c)**

	NSW (h)	Vic	Qld	WA	SA	NT	NSW, Vic, Qld, WA, SA and NT (d)	Tas (e)	ACT (e)	Total (all jurisdictions) (i)
<b>Other (g)</b>	<b>122 885</b>	<b>71 442</b>	<b>81 584</b>	<b>29 562</b>	<b>17 882</b>	<b>1 147</b>	<b>324 502</b>	<b>4 241</b>	<b>2 446</b>	<b>340 703</b>

(a) The ICD-10-AM codes are for principal diagnosis only. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).

(b) Data are reported by State or Territory of usual residence of the patient hospitalised.

(c) Data for individual jurisdictions exclude separations from private hospitals in the NT, Tasmania and the ACT.

(d) Data for the 6 jurisdiction total exclude separations from private hospitals in the NT.

(e) Data for Tasmania and ACT should be interpreted with caution until further assessment of Indigenous identification is completed.

(f) Directly age-standardised using the Australian 2001 standard population (up to 65+ for Tasmania and the ACT, up to 75+ for other jurisdictions).

(g) 'Other' includes hospitalisations of non-Indigenous people and those for whom Indigenous status was not stated.

(h) The volume of separations in NSW may not be directly comparable to other jurisdictions due to variations in admission practices for patients treated in the Emergency Department.

(i) Data include public and private hospitals in all jurisdictions.

Source: AIHW (unpublished) National Hospital Morbidity Database.

TABLE 8A.7.30

Table 8A.7.30 **Age-standardised hospitalisation rates for mental and behavioural disorders (ICD-10-AM codes F00-F99), by Indigenous status (age standardised), by remoteness areas 2012-13 (a), (b)**

	<i>Major cities</i>	<i>Inner and Outer Regional combined</i>	<i>Remote and Very Remote combined</i>	<i>Total</i>
<i>age-standardised rate per 100 000 (c)</i>				
Indigenous	3 201.1	2 465.5	2 802.3	2 888.9
Non-Indigenous (d)	1 520.3	1 216.7	883.6	1 440.4
<i>Number</i>				
Indigenous	6 099	6 059	3 663	16 393
Non-Indigenous (d)	244 858	71 533	3 342	324 026
<i>Rate ratio (e)</i>				
Rate ratio (e)	2.1	2.0	3.2	2.0

(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification).

(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of the hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(c) Rates per 100 000 population are calculated using ABS Estimated 2012 Resident Population by remoteness classification from the 2011 Census (as at 30 June 2011). Rates were directly age standardised to the 2001 Australian population.

(d) Non-Indigenous includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

(e) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.

Source: AIHW (unpublished) National Hospital Morbidity Database.

(a) Mental and behavioural disorders include ICD-10 codes F00-F99.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised), 2012 (preliminary). See Explanatory Notes 29-33 and Technical Notes, Causes of Death Revisions, 2006 in Causes of Death, Australia, 2010 (cat. 3303.0) and Causes of Death Revisions, 2010 and 2011 in Causes of Death, Australia, 2012 (cat. 3303.0).

(c) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all people in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 people. SDRs in this table have been calculated using the indirect method, age standardised by 5 year age group to 75 years and over. Rates calculated using the direct method.

(d) Data are presented in five-year groupings due to the volatility of small numbers each year.

(e) Data based on reference year.

TABLE 8A.7.39

Table 8A.7.39 **Mental and behavioural disorders, age standardised death rates, by Indigenous status (age standardised), by sex, by State and Territory, 2008–2012 (rate per 100 000 population) (a), (b), (c), (d), (e), (f), (g)**

	Indigenous (g)			Non-Indigenous (h)			Rate ratio (i)		
	Males	Females	Persons	Males	Females	Persons	Males	Females	Persons
(f)	Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.								
(g)	Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Indigenous across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.								
(h)	Denominators used in the calculation of rates for the Indigenous population are Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS Cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.								
(i)	Rate ratio is the Indigenous rate divided by the non-Indigenous rate								
(j)	Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. See data quality statements for a more detailed explanation.								
(k)	Aboriginal and Torres Strait Islander data for Western Australia were not published in Causes of Death, Australia, 2010 (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in Causes of Death, Australia, 2010 (cat. no. 3303.0). This adjusted data has been included in this table.								
(l)	Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These 5 states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis. Total includes data for NSW, Queensland, WA, SA and the NT only.								
	<b>np</b> Not published. .. Not applicable.

TABLE 8A.7.40

Table 8A.7.40

**Mental and behavioural disorders deaths and average annual death rates, by Indigenous status, by age, 2008–2012 (a), (b), (c), (d), (e)**

	Unit	Indigenous (f)					Non-Indigenous				
		Under 25	25–34	35–44	45 and over	All ages (g)	Under 25	25–34	35–44	45 and over	All ages (g)
Deaths from mental and behavioural disorders (h)											
NSW, Qld, WA, SA, and the NT (i), (j), (k)	no.	4	2	26	273	306	37	76	137	23 942	24 195
Average annual deaths as a result of mental and behavioural disorders per 100 000 population (l), (m)											
NSW, Qld, WA, SA, and the NT (i), (j), (k)	'000	np	np	7.2	52.7	10.5	0.2	0.7	1.3	80.4	32
Variability bands	+	0.5	2.2	6.2	14	2.6	0.1	0.4	0.5	2.3	0.9

(a) Mental and behavioural disorders include ICD-10 codes F00-F99.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised), 2012 (preliminary). See Explanatory Notes 29-33 and Technical Notes, Causes of Death Revisions, 2006 in Causes of Death, Australia, 2010 (cat. 3303.0) and Causes of Death Revisions, 2010 and 2011 in Causes of Death, Australia, 2012 (cat. 3303.0).

(c) Data are presented in five-year groupings due to the volatility of small numbers each year.

(d) Data based on reference year.

(e) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

(f) Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Indigenous across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.

(g) Includes age not stated.

(h) Data cells with small values have been randomly assigned to protect the confidentiality of individuals. As a result, some totals will not equal the sum of their components. It is important to note that cells with a zero value have not been affected by confidentialisation.

(i) Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. See data quality statements for a more detailed explanation.

TABLE 8A.7.40

(a) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised), 2012 (preliminary). See Explanatory Notes 29-33 and Technical Notes, Causes of Death Revisions, 2006 in Causes of Death, Australia, 2010 (cat. 3303.0) and Causes of Death Revisions, 2010 and 2011 in Causes of Death, Australia, 2012 (cat. 3303.0).

(b) Data are based on State or Territory of usual residence.

(c) Intentional self-harm includes ICD-10 codes X60-X84 and Y87.0.

(d) Data are presented in five-year groupings due to the volatility of small numbers each year.

(e) Data based on reference year.

(f) Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Indigenous across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.

(g) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

TABLE 8A.8.1

**Table 8A.8.1 Deaths from intentional self-harm, by State and Territory, by Indigenous status, by sex, 2008–2012 (a), (b), (c), (d), (e), (f), (g)**

	<i>Unit</i>	<i>NSW</i>	<i>Qld (h)</i>	<i>WA (i)</i>	<i>SA</i>	<i>NT</i>	<b><i>Total (j)</i></b>
(h)	Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. See data quality statements for a more detailed explanation.						
(i)	Aboriginal and Torres Strait Islander data for Western Australia were not published in Causes of Death, Australia, 2010 (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in Causes of Death, Australia, 2010 (cat. no. 3303.0). This adjusted data has been included in this table.						
(j)	Total includes data for NSW, Queensland, WA, SA and the NT only. These five states and territories have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.						
(k)	Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.						
(l)	Denominators used in the calculation of rates for the Indigenous population are Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS Cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.						

**np** Not published.

TABLE 8A.8.3

Table 8A.8.3 **Non-fatal hospitalisations for intentional self-harm by Indigenous status and sex, 2012-13 (a), (b)**

	Number			Age standardised rate per 100 000 population (c)		Rate ratio (d)
	Indigenous	Non-Indigenous	Not stated	Indigenous	Non-Indigenous	
2012-13 (all jurisdictions)						
Males	1 034	10 999	247	318.1	95.7	3.3
Females	1 502	20 053	342	437.0	184.6	2.4
Persons	2 536	31 052	589	378.6	140.1	2.7

(a) Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with at least one external cause reported for ICD-10AM codes 'X60–X84', based on the International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification.

(b) Data are reported for public and private hospitals in all jurisdictions.

(c) Rates per 100 000 population, directly age standardised using the 2001 Australian standard population.

(d) Rate ratio is the Indigenous rate divided by the non-Indigenous rate

Females	890	17 131	329	320.8	180.3	1.8
Persons	1 595	27 946	609	297.3	146.3	2.0
2005-06 (NSW, Victoria, Queensland, WA, SA and NT) (c)						
Males	724	10 740	304	272.4	114.3	2.4
Females	884	17 052	309	322.9	182.2	1.8
Persons	1 608	27 792	613	298.0	147.7	2.0
2004-05 (NSW, Victoria, Queensland, WA, SA and NT) (c)						
Males	584	10 868	253	231.6	117.1	2.0
Females	812	17 447	255	300.2	188.6	1.6
Persons	1 396	28 315	508	266.1	152.4	1.7

(a) Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with at least one external cause reported for ICD-10AM codes 'X60–X84', based on the International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification.

(b) Data are reported for public and private hospitals in all jurisdictions.

(c) Data are reported for residents of NSW, Victoria, Qld, WA and SA and the NT, and exclude separations from private hospitals in the NT.

(d) Rates per 100 000 population, directly age standardised using the 2001 Australian standard population.

(e) Includes hospitalisations where Indigenous status was recorded as Non-Indigenous or not stated.

(f) Rate ratio is the Indigenous rate divided by the Other rate

Source: AIHW National Hospital Morbidity Database (unpublished).

TABLE 8A.8.5

Table 8A.8.5      **Non-fatal hospitalisations for intentional self-harm by Indigenous status, by remoteness of residence, 2012-13 (a), (b), (c)**

	<i>Number</i>			<i>Age standardised rate per 100 000 population (d)</i>		
	<i>Indigenous</i>	<i>Non-Indigenous</i>	<i>Not stated</i>	<i>Indigenous</i>	<i>Non-Indigenous</i>	<i>Rate ratio (e)</i>
Major cities	888	21 165	377	389.2	135.1	2.9
Inner and outer regional	977	8 956	173	346.1	165.6	2.1
Remote and very remote	624	510	19	426.3	143.5	3.0
<b>Total (f)</b>	<b>2 536</b>	<b>31 052</b>	<b>589</b>	<b>378.6</b>	<b>140.1</b>	<b>2.7</b>

(a) Data are from public and private hospitals in all jurisdictions.

(b) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Non-fatal refers to records where the mode of separation was not equal to 'died'. Intentional self-harm refers to hospitalisations with at least one external cause reported in X60–X84, based on ICD-10-AM classification.

(c) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(d) Rates are per 100 000 population. For Major cities; Inner and Outer regional; and Remote and Very remote rates are calculated using the ABS 2012 Estimated Resident Population by remoteness based on the 2011 Census, and are directly age standardised using the 2001 Australian population.

(e) Rate ratio is the Indigenous rate divided by the non-Indigenous rate.

(f) Includes migratory areas and separations with unknown remoteness area.

---

## 9 Economic participation

---

### Strategic areas for action

In 2008, COAG agreed to the *National Partnership Agreement on Indigenous Economic Participation* (expired 30 June 2013) (COAG 2008) and the *National Partnership Agreement on Remote Indigenous Housing* (COAG 2009) with the aim of improving employment and economic development opportunities for Aboriginal and Torres Strait Islander Australians.

Economic participation can affect people's wellbeing in many ways. The indicators in this strategic area for action focus on the key factors that contribute to positive economic outcomes, as well as measures of the outcomes themselves:

- employment by full time/part time status, sector and occupation (section 9.1) — having a job can lead to improved incomes for families and communities, and also enhances self-esteem and reduces social alienation. This indicator, which is closely associated with the COAG target of employment (section 4.6) examines some of the characteristics of the employment undertaken by Aboriginal and Torres Strait Islander Australians
- Indigenous owned or controlled land and business (section 9.2) — land can be important to Aboriginal and Torres Strait Islander Australians for a range of cultural, social and economic reasons. The economic benefits flowing from land depend on factors such as location, property rights, governance arrangements of landholding bodies, and the aspirations of the Aboriginal and Torres Strait Islander landowners. Not all Indigenous businesses are necessarily associated with land.
- home ownership (section 9.3) — home ownership, although not an aspiration of all Aboriginal and Torres Strait Islander Australians, is an important indicator of wealth and saving. (The availability of appropriate, affordable and secure housing is covered in section 10.1)

- 
- income support (section 9.4) — although provision of income support can prevent individuals from experiencing deprivation, reliance on income support is correlated with the disadvantages that accompany low socioeconomic status (see discussion of individual and household income in section 4.9) and can contribute to long-term welfare dependency.

As noted above, economic participation is closely related to the COAG employment target (section 4.6) and the headline indicator on household and individual income (section 4.9).

The extent to which people participate in the economy is closely related to their personal circumstances (Hunter and Gray 2012). Other COAG targets and headline indicators that can directly influence economic participation are:

- early childhood education (section 4.3)
- reading, writing and numeracy (section 4.4)
- disability and chronic disease (section 4.8)
- imprisonment and juvenile detention rates (section 4.12).

Outcomes in the economic development area can be affected by outcomes in several other strategic areas, or can influence outcomes in other areas, including:

- governance, leadership and culture (governance capacity and skills) (chapter 5)
- early child development (basic skills for life and learning) (chapter 6)
- education and training (school attendance and engagement, transition from school to work) (chapter 7)
- healthy lives (access to primary health care, potentially preventable hospitalisations, avoidable mortality) (chapter 8)
- safe and supportive communities (alcohol, drug and substance misuse and harm) (chapter 11).

## Attachment tables

Attachment tables for this chapter are identified in references throughout this chapter by an ‘A’ suffix (for example, table 9A.1.1). These tables can be found on the Review web page ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)), or users can contact the Secretariat directly.

## 9.1 Employment by full time/part time status, sector and occupation<sup>1</sup>

### Box 9.1.1 Key messages

- In 2011–13, almost two-thirds of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years were in full time employment (65.0 per cent), an increase from 54.5 per cent in 2002, and fewer than 5 percentage points from the proportion of non-Indigenous Australians (69.6 per cent) (table 9A.1.1).
- Nationally in 2011, over three-quarters of employed Aboriginal and Torres Strait Islander Australians aged 15–64 years (76.8 per cent) worked in the private sector, compared with 84.3 per cent of employed non-Indigenous Australians (table 9A.1.5).
- The proportion of employed Aboriginal and Torres Strait Islander Australians aged 15–64 years in professional or managerial positions increased from 16.2 per cent in 2001 to 20.1 per cent in 2011. The proportion for non-Indigenous Australians increased from 32.6 to 34.8 per cent over the same period (tables 9A.1.14–16).
- In 2012–13, 20.9 per cent of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years in remote and very remote areas were employed under the Community Development Employment Program (CDEP), which has characteristics of both employment and ‘work for the dole’. The majority of these CDEP participants were employed part time (83.6 per cent) and most were located in very remote areas (86.3 per cent) (table 9A.1.2). Nearly all CDEP participants are employed in non-professional jobs (Hunter and Gray 2012).

### Box 9.1.2 Measures of employment by full time/part time status, sector and occupation

There are three main measures for this indicator:

- *Working hours (full time or part time)* is defined as the proportions of employed people that are employed full time and part time. The main data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent available data for 2012–13. Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/National Health Survey (NHS), with the most recent data for 2011–12. Indicators using both AATSIHS (2012–13) and AHS (2011–12) are referenced as 2011–13. Supplementary data are also available from the Census of Population and Housing, with the most recent available data for 2011. Survey and Census data are not directly comparable.

(continued next page)

---

<sup>1</sup> The Steering Committee notes its appreciation to Ms Heron Loban, James Cook University, who reviewed a draft of this section of the report.

---

**Box 9.1.2** (continued)

- *Sector of employment (public or private)* is defined as the proportion of employed people employed in each sector. The main data source is the Census, with the most recent available data for 2011. AATSIHS/NATSISS data are not available for this measure.
- *Occupation* is defined as the proportion of employed people employed in each occupation type. The main data source is the Census, with the most recent available data for 2011. AATSIHS/NATSISS data are not available for this measure.

Data are also reported for a supplementary measure of the proportion of employed people in each industry.

AATSIHS/NATSISS data are reported for persons aged 18–64 years to enable comparisons of outcomes in 2004–05, 2008 and 2011–13 with those in 1994 and 2002. Census data are available for persons aged 15–64 years.

Data are available for all jurisdictions by age, sex, and remoteness.

This indicator is closely related to the employment indicator in section 4.6, which includes data on labour market participation, employment and unemployment rates, and is aligned with the associated National Indigenous Reform Agreement (NIRA) indicator. This section examines some of the characteristics of the employment undertaken by Aboriginal and Torres Strait Islander Australians, including occupation and sector of employment.

## **CDEP**

Census data are used for reporting on sector of employment and occupation, as they provide the most detailed information. However, these data are influenced by the Community Development Employment Projects (CDEP) program, which has characteristics of both employment and ‘work for the dole’ (more information on CDEP is provided in section 4.6). In the Census, CDEP participants were only separately identified for discrete Indigenous communities (the CDEP item was not asked of people in other areas). These CDEP participants were classed as employed (rather than as unemployed or not in the labour force). The eventual phasing out of CDEP (the program is expected to cease mid-2017) is likely to have affected the characteristics of the employed workforce.

For context, 2012–13 survey data show that 20.9 per cent of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years in remote and very remote areas were employed under the CDEP. The majority of these CDEP participants were employed part time (83.6 per cent) and most were located in very remote areas (86.3 per cent). Nearly three-quarters (74.0 per cent) of the CDEP participants in very remote areas were employed part time (table 9A.1.2). Nearly all CDEP participants are employed in non-professional jobs (Hunter and Gray 2012).

---

## Full time and part time employment status

While many people work part time by preference (ABS 2014), for others it may reflect underemployment — which occurs when an individual would like to, and is available to work more hours. Underemployment has been found to be particularly common among Indigenous employees (Hunter 2002).

In 2012-13, almost two-thirds of employed Aboriginal and Torres Strait Islander Australians were in full time employment (65.0 per cent), an increase from 54.5 per cent in 2002, and less than 5 percentage points from the proportion for non-Indigenous Australians (69.6 per cent) (table 9A.1.1). The largest increases in Aboriginal and Torres Strait Islander full time employment were in remote and very remote areas (from 45.3 per cent in 2004-05 to 56.6 per cent in 2012 13) (table 9A.1.1).

---

Figure 9.1.1 **Proportion of employed people aged 18–64 years in full time employment, 2002 to 2011–13<sup>a,b,c,d</sup>**

<sup>a</sup> Includes CDEP employment. <sup>b</sup> There is no non-Indigenous comparator available for 2002. <sup>c</sup> Error bars represent 95 per cent confidence intervals around each estimate. <sup>d</sup> The 2011–13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012-13 AATSIHS. Data for non-Indigenous Australians are from the 2011–13 AHS (for the period 2011-12).

*Sources:* ABS (unpublished) NATSISS 2002; ABS (unpublished) NATSIHS 2004 05; ABS (unpublished) NHS 2004 05; ABS (unpublished) NATSISS 2008; ABS (unpublished) NHS 2007 08; ABS (unpublished) AATSIHS 2012 13 (core component); ABS (unpublished) AHS 2011–13 (2011 12 Core component); table 9A.1.1.

---

The gap in full time employment between Aboriginal and Torres Strait Islander and non-Indigenous Australians is narrowing (from 11.5 percentage points in 2004-05 to less than 5 percentage points in 2011–13), due to the combination of an increase in Aboriginal

---

and Torres Strait Islander full time employment and a decrease in non-Indigenous full time employment (from 71.4 per cent in 2004 05 to 69.6 per cent in 2011–13) (figure 9.1.1).

Data for this measure for people aged 15–64 years by State/Territory, age, sex and remoteness are available from the Census back to 2001 (tables 9A.1.3–4).

## **Employment by sector and occupation**

Data from the 2011 Census show that over three-quarters (76.8 per cent) of employed Aboriginal and Torres Strait Islander Australians aged 15–64 years worked in the private sector, with 23.2 per cent working in the public sector. This compares with 84.3 per cent of employed non-Indigenous Australians working in the private sector, and 15.7 per cent working in the public sector. The proportion of employed Aboriginal and Torres Strait Islander Australians working in the private sector in 2011 decreased (with a corresponding increase in the public sector) as remoteness increased (table 9A.1.5).

Under the National Partnership Agreement on Indigenous Economic Participation [which expired on 30 June 2013] (COAG 2008), COAG agreed to a national target of at least 2.7 per cent of public sector employment for Aboriginal and Torres Strait Islander Australians by 2015, to reflect the expected national Indigenous working age population share. Based on current trends, this target is unlikely to be achieved (ANAO 2014). The 2012–13 State of the Service Report (APSC 2013) showed Aboriginal and Torres Strait Islander representation in the Australian (Commonwealth) public sector as at 30 June 2013 was 2.3 per cent, similar to the previous five years.

Professional and managerial occupations require a skill set corresponding to a bachelor degree or higher qualification (Taylor et al. 2012). Information on participation and attainment of tertiary education can be found in section 4.7 of this report. Data from the 2011 Census show that of employed Aboriginal and Torres Strait Islander Australians aged 15–64 years whose occupation was known, 20.1 per cent were in professional or managerial occupations (table 9A.1.14), an increase from 16.2 per cent in 2001 (table 9A.1.16). The proportion for non-Indigenous Australians in 2011–12 was 34.8 per cent (table 9A.1.14), an increase from 32.6 per cent in 2001 (table 9A.1.16).

## **Employment by industry**

In 2011–13, the largest proportion of employed Aboriginal and Torres Strait Islander Australians aged 18–64 years were in the ‘health care and social assistance’ (14.4 per cent) and ‘public administration and safety’ (12.9 per cent) industry sectors, with these proportions similar to 2008 (tables 9A1.17 and 9A1.19). For non-Indigenous employed people, the largest proportions were employed in the ‘healthcare and social assistance’ (11.8 per cent) and ‘retail trade’ (10.1 per cent) industry sectors (tables 9A1.18 and 9A1.20).

---

Census data for 2011 show similar trends (tables 9A.1.21 and 9A.1.23).

## Things that work

A number of programs are targeted at increasing Aboriginal and Torres Strait Islander employment. Box 9.1.3 provides an example of a promising program that is improving employment outcomes.

### Box 9.1.3 Things that work — improving Indigenous employment

Although it has not been formally evaluated, the Steering Committee has identified the Mossman Gorge Centre as a promising program worth further examination, particularly the cost-effectiveness of the program.

**Mossman Gorge Centre** (Queensland) opened in June 2012. The Centre is an Aboriginal and Torres Strait Islander eco-tourism development developed by the Indigenous Land Corporation (ILC) in collaboration with the local Kuku Yalanji people, on land purchased through the ILC's Land Acquisition program and supported through the Indigenous Employment Program. It offers visitors improved access to the Mossman Gorge World Heritage area (including a café and art gallery, shuttle access to the gorge and a choice of Indigenous cultural tours) as well as providing employment and training opportunities for Aboriginal and Torres Strait Islander people (ILC 2013). More than 240 000 people have visited the Centre, which is providing a growing income base for the Aboriginal and Torres Strait Islander community (ILC nd; Australian Government 2013).

Aboriginal and Torres Strait Islander employment is a key outcome of the centre and after its first year of operation, 90 per cent of the Centre's staff are Aboriginal and Torres Strait Islander (ILC 2013). To assist Aboriginal and Torres Strait Islander Australians to achieve employment, a residential training facility for up to 20 students was built adjacent to the Centre. The training facility provides local people with accredited skills that enable them able to work at the Centre and in broader hospitality and tourism industries. In 2012-13, 21 out of 29 students in a 20-week Certificate II in Hospitality graduated, and 15 students were placed into employment at the Centre and elsewhere (ILC 2014).

Mossman Gorge Centre received a 2013 Australian Business Award for Community Contribution, in recognition of the long-term employment and training and economic development benefits provided to the local Aboriginal and Torres Strait Islander community (ILC 2013).

*Sources:* ILC nd, *Mossman Gorge Centre*, <http://www.ilc.gov.au/Tourism-Businesses/Profiles/Mossman-Gorge-Centre> (accessed 8 October 2014); ILC 2013, *Annual Report 2012 - 2013*, Australian Government, Canberra; Australian Government 2013, *Closing the Gap Prime Minister's Report 2013*, Australian Government, Canberra.

## Future directions in data

Early time series data for this indicator were only available for people aged 18–64 years. Future reporting on this indicator may include a shorter time series for people aged from

---

15–64 years to align the scope of reporting with the general employment indicator in section 4.6 (including the associated NIRA indicator) and supplementary Census data.

CDEP status was only partially collected in the Census. Whilst this program is being phased out, if equivalent programs are put in place in the future, it would be useful to have this information collected as part of the Census and other surveys.

In late 2013, the Prime Minister asked Mr Andrew Forrest to lead a Review of Indigenous Training and Employment Programmes. The review was finalised and the report released in August 2014. The Australian Government undertook consultations on the recommendations in the report until 20 September 2014 and at the time of finalising this report was anticipated to provide its response after consideration of the review's recommendations.

---

## 9.2 Indigenous owned or controlled land and business<sup>2</sup>

### Box 9.2.1 Key messages

- Ownership and control of land and business can provide a range of social and economic benefits to Aboriginal and Torres Strait Islander Australians, including increased income and employment.
- Indigenous Land Corporation data show that, in April 2014, Aboriginal and Torres Strait Islander Australians collectively owned or controlled 16 per cent of land in Australia. Most of this land (97.9 per cent) was in very remote areas (table 9A.2.2).
- Nationally in 2013:
  - native title had been determined to exist in full or in part in 20.7 per cent of Australia, up from 4.7 per cent in 2004 (figure 9.2.1). Very remote areas had the greatest proportion (25.6 per cent), with less than 3 per cent in all other remoteness areas (table 9A.2.4)
  - registered Indigenous Land Use Agreements (ILUAs)<sup>3</sup> covered 23.8 per cent of Australia. The cumulative number of ILUAs increased from 84 in June 2003 to 768 in June 2013 (figure 9.2.2).
- In 2012-13, 5.8 per cent of Aboriginal and Torres Strait Islander employees aged 18–64 years were self-employed. This proportion has not changed significantly since 1994, whilst the non-Indigenous proportion has declined over time (from 20.5 per cent in 2001 to 10.5 per cent in 2011-12) (table 9A.2.13).

### Box 9.2.2 Measures of Indigenous owned or controlled land and business

There are five main measures for this indicator. The different forms of land tenure reported overlap and cannot be aggregated.

- *Indigenous owned or controlled land* is defined as the proportion of all land which is Indigenous owned or controlled. Indigenous owned or controlled land may be freehold, leasehold, crown, license, Aboriginal Deed of Grant in Trust or not stated tenure. The most recent available data for this measure are from the Indigenous Land Corporation, as at 30 April 2014 (all jurisdictions; remoteness).

(continued next page)

---

<sup>2</sup> The Steering Committee notes its appreciation to Ms Heron Loban, James Cook University, who reviewed a draft of this section of the report.

<sup>3</sup> ILUAs provide an alternative mechanism for resolving native title issues, and may precede or follow a determination of native title, or might be negotiated in the place of such a determination. ILUAs are agreements about the use and management of land and waters, made between one or more native title groups and other parties such as mining companies (NNTT 2010).

---

### Box 9.2.2 (continued)

- *Native title* is defined as the proportion of land where native title has been found to exist wholly or partially. This is measured as at 30 June each year. The most recent available data for this measure are for 30 June 2013, from the National Native Title Tribunal (NNTT) (all jurisdictions; remoteness).
- *Indigenous land use agreements* (ILUAs) has two sub-measures, defined as:
  - the number of ILUAs that intersect each State/Territory
  - the proportion of land subject to ILUAs

The most recent available data for both measures are for 30 June 2013, from the NNTT (all jurisdictions; remoteness).

- *Economic benefits of Indigenous rights to land* is reported using qualitative information about: home ownership; service delivery; customary economy; tradeable assets; eco-services/land management and commercial businesses.
- *Self-employment and Indigenous business* is defined as the number of employed people aged 18–64 years who are self-employed. The main data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS) with the most recent data for 2012-13 (all jurisdictions; age; sex; non-remote areas only). Data for the non-Indigenous population are sourced from the ABS Australian Health Survey (AHS)/National Health Survey (NHS), with data available for 2011-12. Indicators using both AATSIHS (2012-13) and AHS (2011-12) are referenced as 2011–13. Supplementary data are available from the ABS Census of Population and Housing (Census) with the most recent data for 2011 (all jurisdictions; age; sex; remoteness).

Ownership and control of land can provide a range of benefits to Aboriginal and Torres Strait Islander Australians. Land ownership may lead to greater autonomy and economic independence, and more political influence. It can also deliver commercial benefits like increased income, employment and profits (Altman and Dillon 2004). Aboriginal and Torres Strait Islander owned businesses (which may or may not be associated with Indigenous owned or controlled land) can provide a source of employment and income for individuals and communities.

The focus on this section is on Indigenous owned or controlled land and business as measures of economic participation. The social and cultural importance of land to Aboriginal and Torres Strait Islander Australians is discussed in section 5.8 (access to traditional lands and waters).

## Indigenous owned and controlled land

This section examines the extent to which Aboriginal and Torres Strait Islander Australians have communal rights over land that are virtually equivalent to freehold title. Though similar, transfer rights for Aboriginal and Torres Strait Islander land are quite restricted compared to those for ordinary freehold title.

---

Data are reported on purchases by the Indigenous Land Corporation (ILC), Native Title decisions and ILUAs. Consolidated data are not available on other mechanisms for Aboriginal and Torres Strait Islander Australians to own or control land interests, including: management and return of land [held in perpetuity] through bodies such as the Aboriginal Lands Trust in South Australia and the Aboriginal Land Council of Tasmania, and Protected Areas returned by the Tasmanian Government, and the acquisition of private freehold title by individual Aboriginal and Torres Strait Islander Australians (some relevant information on private freehold title is in section 9.3 home ownership).

Nationally in 2013, Indigenous owned or controlled land comprised 16 per cent of the area of Australia (table 9A.2.1). Nearly all (97.9 per cent) Indigenous owned or controlled land was in very remote areas of Australia (table 9A.2.2). These data measure the area of land held under different forms of title.<sup>4</sup> However, land area is an imperfect indicator of the economic benefits that may be derived from land. Much of the Aboriginal and Torres Strait Islander owned or controlled land in Australia is of great cultural significance but low commercial value.

### Indigenous Land Corporation purchases

The ILC purchases land for Aboriginal and Torres Strait Islander Australians that cannot be acquired via other means (for example, land that is not available for claim under native title). Between 1995 and 30 June 2013, the ILC acquired 246 properties (of which 170 have been divested), covering almost 6 billion hectares, in remote, rural and urban locations, worth approximately \$178 million (ILC 2013) (see table 9A.2.12 for a map of the ILC's land acquisition activity). An Australian National Audit Office (ANAO) audit in 2013 found that whilst acquisition and divestment results were lower than the ILC targets the ILC had managed to acquire a diverse range of properties, and noted that the timely and successful divestment of properties (to Indigenous organisations/corporations) was recognised by the ILC as a recurring issue (ANAO 2013).

### Native title

In 1992, the High Court of Australia decided in the Mabo case that the common law of Australia would recognise native title.<sup>5</sup> This decision led to the Commonwealth *Native Title Act 1993*, which provided a process for native title claims to be determined through the court system. The Federal Court or another individual or body can mediate a claim (Coombs 2012).

---

<sup>4</sup> This includes land that is freehold (alienable and inalienable), leasehold, Crown, licenced, and Aboriginal Deed of Grant in Trust, as well as land for which tenure was not stated.

<sup>5</sup> Native title is the recognition in Australian law that some Indigenous people continue to hold rights to their land and waters, which come from their traditional laws and customs (NNTT 2009).

---

Native title provides Aboriginal and Torres Strait Islander Australians with communal rights and interests, with varying levels of control and management of lands and waters. Native title varies according to the rights and interests under the group's traditional laws and customs, and the extent to which a government has created or asserted rights that are inconsistent with any claimed native title right. Table 9A.2.9 illustrates the potential effect of existing broad land tenure on the existence of native title, and shows that, as at 30 June 2013, the majority of NSW, Victoria, Queensland and Tasmania have extinguished native title (meaning all native title rights are lost under Australian law).

Applications for determinations of native title commence as proceedings in the Federal Court and remain until they are resolved through determination, withdrawal, strike-out or dismissal. Following the 2009 amendments to the *Native Title Act 1993*, additional approaches to the settlement of claims were introduced to increase the rate of resolution (for example, settlement packages), and the Federal Court of Australia has resolved native title claims at an increased rate (Federal Court of Australia 2013). Of the 232 native title determinations made since 1994, 182 found that native title existed over the whole or part of the determination area, and 50 found that native title did not exist (NNTT unpublished).<sup>6</sup> As at 30 June 2013, 457 active applications were in the system.

As at 30 June 2013, native title had been determined to exist in full or in part in 20.7 per cent of the total area of Australia, compared with 4.7 per cent in June 2004, with the largest proportions in WA (35.6 per cent) and SA (31.6 per cent) (figure 9.2.1). Tables 9A.2.7–8 show maps of determinations of native title by State and Territory and remoteness.

---

<sup>6</sup> The 50 claims where native title was determined not to exist include applications which were made by land councils in NSW in response to the requirements of the Land Rights Act 1983 (NSW). Of the 50 determinations that native title does not exist that were made up to 30 June 2013, 38 were in response to non-claimant applications made by land councils in NSW (NNTT unpublished).

**Figure 9.2.1 Proportion of land within states and territories where native title is determined to exist, 2004 to 2013<sup>a,b,c</sup>**

**a** At 30 June. **b** Australian total includes Jervis Bay Territory and Commonwealth waters where determinations of native title have been made. **c** There have been no determinations of title in Tasmania or the ACT.

Source: NNTT (unpublished); table 9A.2.3.

## Indigenous Land Use Agreements

Indigenous Land Use Agreements (ILUAs) provide an alternative mechanism for resolving native title issues, and may precede or follow a determination of native title, or might be negotiated in the place of such a determination. ILUAs are agreements about the use and management of land and waters, made between one or more native title groups and other parties such as mining companies. ILUAs are made possible by the *Native Title Act 1993*, and must be registered with the NNTT. Aboriginal and Torres Strait Islander Australians may negotiate agreements that lead to economic benefits, like employment and compensation, or to meet other aspirations in ways not possible under native title (NNTT 2010).

The proportion of land subject to ILUAs refers to the total area of a State or Territory covered by registered ILUAs as a proportion of the total area of the State or Territory. ILUAs can overlap (a place may be subject to multiple ILUAs) but the following figures do not include any double counting. (Data on the gross area of ILUAs is in table 9A.2.5). As at 30 June 2013, 23.8 per cent of the total area of Australia was subject to ILUAs, with most of the land (79.9 per cent) in very remote areas (table 9A.2.6).

The total number of ILUAs increased from 84 at 30 June 2003 to 768 at 30 June 2013 (figure 9.2.2). Most ILUAs were in Queensland with the 500<sup>th</sup> agreement registered on 25 November 2013 (NNTT 2013).

Tables 9A.2.10–11 contain maps showing the areas covered by registered ILUAs by State and Territory and remoteness.

Figure 9.2.2 Indigenous Land Use Agreements, 2003 to 2013<sup>a,b</sup>

<sup>a</sup> Total number of ILUAs in place as at 30 June in each year; totals are cumulative. <sup>b</sup> There are no ILUAs in Tasmania or ACT.

Source: NNTT (unpublished); table 9A.2.5.

## The economic benefits of land

The potential to derive economic benefits from activities on land may depend on: the location of the land, particularly in remote areas; the attributes of the land; the extent of ownership and control over the land (for example, communal or otherwise restricted land title may limit selling or leasing the land, or restrict land use); and the capacity and aspirations of the traditional owners.<sup>7</sup> Altman and Dillon (2004) outline seven potential economic benefits that may accrue to Aboriginal and Torres Strait Islander Australians

<sup>7</sup> A small proportion (less than one per cent) of Indigenous owned or controlled land in Australia is inalienable freehold land (table 9A.2.1). While inalienable title ensures that Indigenous land remains in the control of Indigenous people, it can restrict people's ability to develop land for uses such as housing and business. The New South Wales jurisdiction is unique, as under the NSW *Aboriginal Land Rights Act 1983*, Aboriginal Land Councils hold their land under alienable freehold title. This permits participation in commercial ventures (at the direction of their members and subject to the approval of the peak NSW Aboriginal Land Council) (AA 2014).

---

from rights to land including: home ownership, service delivery, customary economy, land management, tradeable assets, eco-services and commercial business. Many of these sources of benefit overlap.

### Home ownership

Private home and land ownership can provide economic benefits from living in, renting out, selling or borrowing against the property (see section 9.3 for more information about home ownership). Many Aboriginal and Torres Strait Islander Australians, particularly in remote and very remote areas, live in community housing built on communally owned land. ‘Inalienable’ communal title means land cannot be sold or mortgaged.<sup>8</sup> This ensures ongoing Indigenous ownership of land but can create barriers to individuals using land for housing or business, or as security for a loan.

In Queensland, the Indigenous trustees of Aboriginal or Torres Strait Islander land can grant 99 year leases of land, which are perpetual in nature, via Deed of Grant in Trust (DOGIT) to Aboriginal members of the community. The granting of a 99 year lease enables the leaseholder to borrow to purchase an existing dwelling or finance a new dwelling on vacant land. In SA, the Aboriginal Lands Trust can grant 99 year leases of land to individuals under its legislation. Currently, the majority of residential land is leased to Aboriginal community councils for 99 years. In the NT, individual property rights in town areas on Indigenous communally owned land have been encouraged by the introduction of 99 year head leases to government entities, which can subsequently make sub-leases, which can be used for private home ownership, business or other purposes. The first township lease was entered into for Wurrumiyanga (Nguiu) on the Tiwi Islands in 2007 and has enabled home ownership in the community (FaHCSIA 2013; Terrill 2013). Township leases have since been entered into over the Groote Eylandt region communities of Angurugu, Umbakumba and Milyakburra in 2008 and over the Tiwi Island communities of Milikapiti and Ranku in 2011.

### Service delivery

Communally owned land can be used to site and deliver services to Aboriginal and Torres Strait Islander communities, such as community housing, aged care and postal services, while income from land investments can enable the funding of services.

### Customary and hybrid economy

Aboriginal and Torres Strait Islander Australians can benefit from customary (non-monetary) activities associated with land. Fishing, hunting and gathering associated with living ‘on country’ remain important parts of some Aboriginal and Torres Strait

---

<sup>8</sup> Except in SA, where Aboriginal Land Trust freehold land can be sold with the consent of both Houses of Parliament.

---

Islander communities (Altman 2001; Fordham et al. 2010). Some Aboriginal and Torres Strait Islander Australians have adapted customary activities, such as food gathering, to create products for sale, becoming part of a hybrid economy that intersects with the market economy (Altman 2009 cited in Russell 2011) (see section on commercial businesses).

### Tradeable assets

Aboriginal and Torres Strait Islander Australians have negotiated land use agreements with governments and others (for example, mining companies and pastoralists). These agreements can yield benefits in the form of monetary payments; support for community services, facilities and infrastructure; employment and training programs; and protection of cultural sites. Amendments to the Tax Laws Act in June 2013 helped clarify the taxation treatment of native title benefits by stating that these benefits are not subject to income tax (including capital gains tax). This may assist Aboriginal and Torres Strait Islander Australians to unlock the economic potential of their native title (NNTT unpublished).<sup>9</sup>

### Eco-services and land management

Many Commonwealth, State and Territory programs recognise and employ Aboriginal and Torres Strait Islander Australian's land management skills, through joint management of conservation reserves, national parks and marine parks.

Indigenous Protected Areas (IPAs) are areas of Indigenous-owned land or sea where traditional owners have agreed with the Australian Government to promote biodiversity and cultural resource conservation. As at January 2014, there were 51 agreements in place, spanning over 36 million hectares (Department of the Environment 2014). IPA agreements provide funding that can be used to employ Aboriginal and Torres Strait Islander Australians to undertake the work required to meet the goals of the IPA.

### Commercial businesses

Enterprise development, utilising the natural resources found on Indigenous owned or controlled land, provides opportunities for economic development whilst allowing Aboriginal and Torres Strait Islander Australians to maintain close connection to the land and maintain customary practices (Bawinanga Aboriginal Corporation 2007; Fordham, Fogarty and Fordham 2010). Examples of natural resource enterprises include: carbon abatement programs and eco-services; wildlife ventures involving the collection of native animals and plants for the medicine, bush food and pet trades; tourism businesses; art enterprises; and pastoral businesses such as beef cattle enterprises and orchards.

---

<sup>9</sup> In an attempt to quantify the potential economic benefits that native title can deliver to Indigenous communities, a House of Representatives inquiry into the taxation treatment of native title benefits reported that mining companies are paying \$200 million annually to Indigenous communities in the Pilbara (House of Representatives Standing Committee on Economics 2013).

---

## Things that work

A case study of a promising program that supports Indigenous owned or controlled land is presented in box 9.2.3.

### Box 9.2.3 Things that work — Indigenous owned or controlled land

Although the outcomes have not been formally evaluated, the Steering Committee has identified the Indigenous Landholder Services as a promising program worth further examination.

**Indigenous Landholder Services (ILS)** is a collaborative partnership in WA between the Department of Agriculture and Food WA (DAFWA) and the Indigenous Land Corporation (ILC). Established in 1996 in one remote community, ILS has expanded to include 70 properties in six geographic areas. The program focusses on technical support, governance development and business management mentoring to increase economic benefits to Aboriginal pastoral and agricultural producers (DAFWA, 2014). The program employs four Aboriginal and Torres Strait Islander Australians full-time to deliver support and services. As at July 2014, advice and support had been provided to 72 landowners. In 2012-13, training was delivered on 24 properties with 227 Aboriginal people attending training.

ILS advice and recommendations have contributed to the following improvements:

- 33 properties improved land management practices,
- 14 properties increased their annual income,
- 24 businesses expanded their operations through improved infrastructure and/or expanded herd size, and
- 22 business and property management plans were developed increased viability and profitability have enabled stations to increase employment.

In the six months to June 2014, 72 properties have gained sufficient capability and independence to reduce the need for ILS assistance, while three are now independent (DAFWA ILS 2014).

In 2011, the ILS won the nation's top award for Indigenous Economic Development from Economic Development Australia (Government of WA, 2011).

*Sources:* DAFWA (2014) website, personal communications, ILS Winter Newsletter; Government of WA (2011) media statement.

## Self-employment and Indigenous owned business

Self-employment and participation in ownership of enterprises can allow individuals to improve overall levels of economic participation through increased financial capacity and independence.

Both the public and private sectors have a direct role in supporting Indigenous business, through programs, finance and other business support (Hunter 2013). Since 2009, the Business Council of Australia (BCA) has surveyed its member companies on their

---

Indigenous engagement. In 2013, 49 of the 95 respondent companies (51.5 per cent) reported that they had knowingly used an Indigenous business in their supply chain (an increase from 16 companies in 2009), whilst 37 per cent of respondent companies said government tender/reporting requirements would influence them in strengthening their Indigenous engagement strategies (BCA 2013).

In 2011–13, 5.8 per cent of employed Aboriginal and Torres Strait Islander Australians in non-remote areas aged 18–64 years were self-employed, compared with 10.5 per cent of non-Indigenous Australians (table 9A.2.13).

Between 1994 and 2012–13, the proportion of employed Aboriginal and Torres Strait Islander Australians who were self-employed remained stable (ranging between 8.6 per cent in 2001 and 5.8 per cent in 2012–13). The corresponding proportion for non-Indigenous Australians almost halved over the same period (from 20.5 per cent in 2001 to 10.5 per cent in 2011–12).

Census data are available for a broader scope of reporting (for remote and non-remote areas and for people aged 15–64 years). Data from the 2011 Census show that, of employed Aboriginal and Torres Strait Islander Australians aged 15–64 years, 5.9 per cent were self-employed. Whilst this proportion has remained fairly constant since 2001, there has been a slight decrease for non-Indigenous Australians over the same period (from 16.6 per cent to 14.5 per cent) (table 9A.2.15). Data by State and Territory, age, sex and remoteness are available in tables 9A.2.13–15.

## Things that work

A program that supports Indigenous owned or controlled businesses is presented in box 9.2.4.

### Box 9.2.4 Things that work — Indigenous owned or controlled business

**Supply Nation** (formerly Australian Indigenous Minority Supplier Council) was established to assist Indigenous businesses with Certified Supplier status to enter into commercial relationships with some of Australia's largest corporations and agencies who wish to purchase goods and services (IBA 2014).

Currently Supply Nation works with 141 member organisations and 274 certified Indigenous suppliers. Its member entry requirement is that the business be at least 51 per cent Indigenous owned. Since its inception in 2009, Supply Nation has recorded more than \$91.8 million in purchases and more than \$98.6 million in contracts between member organisations and Indigenous businesses (Supply Nation, 2014). There are a broad range of Supply Nation certified Indigenous businesses, and cover industries including arts and crafts, transport, hospitality services, security services, employment services and cosmetics (AIHW 2014).

(continued next page)

---

#### Box 9.2.4 (continued)

A post-implementation review of the former Council indicated the concept was achieving significant success in the first two years of the pilot project which then led to Supply Nation being established (AIHW 2014; DEEWR 2011).

The Closing the Gap Clearinghouse has found the following practices have helped Indigenous businesses and community-based enterprises:

- government programs that assist Indigenous people to access finance that has otherwise not been available through commercial avenues
- services that provide financial and business advice and ongoing support
- membership bodies (such as Supply Nation) that link Indigenous businesses into the supply chains of large companies and government agencies (AIHW 2014).

Sources: Supply Nation (2013, 2014), *Annual Report 2012-2013*; DEEWR (2011), *Post-implementation review of the Australian Indigenous Minority Supplier Council*; Indigenous Business Australia (2014), Supply Nation; AIHW (2014), *Success factors for Indigenous entrepreneurs and community-based enterprises*, Resource sheet no. 30 produced for the Closing the Gap Clearinghouse.

## Future directions in data

Self-employment data by Indigenous status in remote areas are not currently available from ABS surveys — largely due to the difficulty of obtaining a sufficient sample for reliable estimates. An alternative approach to collecting these data should be investigated.

The ABS has developed a statistical definition for an Aboriginal and Torres Strait Islander owned business (ABS 2012). However, there is currently no data collection.

## 9.3 Home ownership<sup>10</sup>

### Box 9.3.1 Key messages

- The proportion of Aboriginal and Torres Strait Islander adults who lived in a home owned, with or without a mortgage, by a member of their household increased from 21.5 per cent in 1994 to 27.4 per cent in 2002 and 30.1 per cent in 2012-13 (table 9A.3.3). Earlier data are not available, but the proportion for non-Indigenous Australians decreased from 73.7 per cent in 2002 to 71.8 per cent in 2011-12 (table 9A.3.2).
- Home ownership declined with remoteness for Aboriginal and Torres Strait Islander Australians, ranging from 38.4 per cent in major cities to 5.1 per cent in very remote areas in 2012-13 (figure 9.3.1).

### Box 9.3.2 Measures of home ownership

There are two main measures for this indicator.

- *Living in a home owned with or without a mortgage* is defined as the proportion of people aged 18 years and over, living in homes someone in their household owned, with or without a mortgage. The main data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent data available for 2012-13 (NATSIHS component). Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/National Health Survey (NHS)), with data for 2011-12 (NHS component). Indicators using both AATSIHS (2012-13) and AHS (2011-12) are referenced as 2011-13. Supplementary data are also available from the Census of Population and Housing, with the most recent available data for 2011 (all jurisdictions; age, sex; remoteness). Survey and Census data are not directly comparable.
- *Proportion of Indigenous households owning or purchasing a home* is defined as the number of Aboriginal and Torres Strait Islander households owning or purchasing a home as a proportion of the total number of Aboriginal and Torres Strait Islander households. An Aboriginal and Torres Strait Islander household is defined as a household where one or more occupants identify as being of Aboriginal and/or Torres Strait Islander origin. Data are sourced from the AATSIHS/NATSISS, with the most recent data available for 2012-13 (NATSIHS component) (all jurisdictions; location; tenure).

Supplementary data are also provided on the proportion of people living in public, community and private rental housing.

Home ownership is closely related to outcomes in other indicators in this report, particularly those concerning education, income and employment. Home ownership is an important indicator of wealth and saving, as owning a home provides a secure asset base against which people can borrow, contributes to financial stability and provides opportunity for wealth creation. Home ownership also provides security of tenure and

---

<sup>10</sup> The Steering Committee notes its appreciation to Ms Heron Loban, James Cook University, who reviewed a draft of this section of the report.

---

allows control over living arrangements. Research highlights the perceived intergenerational benefits of home ownership for Aboriginal and Torres Strait Islander Australians (rather than economic benefits such as selling a house for profit) (FaHCSIA 2010; Memmott et al. 2009).

During consultations for previous editions of this report, many Aboriginal and Torres Strait Islander Australians said that home ownership was an important part of improving wellbeing and an essential indicator in the framework. Some Aboriginal and Torres Strait Islander Australians said that home ownership was important to them as a connection to the land, particularly in closely settled regions where native title has been extinguished and there are limited opportunities for land grants. Others suggested that not all Aboriginal and Torres Strait Islander Australians want to own their own homes; people who move frequently for family and cultural reasons may prefer to rent accommodation. Some of those in more remote areas and living more traditional lifestyles may prefer a more communal form of ownership.

Research suggests that some Aboriginal and Torres Strait Islander Australians may face greater barriers to attaining home ownership than those faced by non-Indigenous Australians (Birdsall-Jones and Corunna 2008; FaHCSIA 2010; Szava and Moran 2008). Although affordability is a widespread issue in Australia, smaller markets and higher construction costs in remote areas are also problematic for home ownership (Crabtree et al. 2012; FaHCSIA 2013). The availability of appropriate, affordable and secure housing is covered in section 10.1, ‘Overcrowding in housing’.

The Australian National Audit Office (ANAO) found that barriers associated with home ownership for Aboriginal and Torres Strait Islander Australians included: higher unemployment rates; intergenerational welfare dependency; lower incomes and likely lack of savings; limited access to loans; and lack of information about financial planning. These factors were particularly prevalent amongst those living in remote and very remote areas (ANAO 2010). Additional barriers include access to initial capital, complexities of the lending process, and a shortage of affordable housing (FaHCSIA 2013).

Under COAG agreements, governments have committed to Aboriginal and Torres Strait Islander Australians having the same housing opportunities as other Australians, and reducing Indigenous disadvantage by improving access to mainstream housing, including home ownership (COAG 2012). Community Land Trusts (CLT) are being explored as a way to increase home ownership amongst Aboriginal and Torres Strait Islander Australians. A CLT is a not-for-profit organisation that purchases or leases land or property to provide affordable housing and community benefit in the longer term (Crabtree et al. 2012). Collective community ownership bestows the benefits of ongoing control of the land and reduces the risk of losing access through the establishment of freehold title (Crabtree et al. 2012; Wensing and Taylor 2012).

A report prepared by FaHCSIA for the then Select Council on Housing and Homelessness (FaHCSIA 2013) divides Aboriginal and Torres Strait Islander home ownership into two categories: ‘established market’ and ‘on Aboriginal and Torres Strait Islander land’.

---

Established markets generally offer higher appreciation in value and hence greater economic opportunities and wealth creation — but can be less affordable. Home ownership on Aboriginal and Torres Strait Islander land provides ongoing connection to the land. However, challenges in purchasing or acquiring a private interest on Aboriginal and Torres Strait Islander land include land tenure arrangements. For example, where land is not freehold it cannot be sold and cannot be mortgaged. This ensures its continuing ownership by Aboriginal and Torres Strait Islander Australians, but means that developments on the land need to be pursued through leasing and sub-leasing arrangements. Australia's legislative provisions for sub-leasing and private sector financing are different in every State and Territory. In addition, most communally owned Aboriginal and Torres Strait Islander land is located in remote and very remote areas with higher infrastructure, development, construction and maintenance costs, limited access to employment and services. Section 9.2 looks at 'Indigenous owned or controlled land and business' in more detail.

The Queensland Government and the Australian Government (in respect of the Northern Territory) have undertaken Indigenous land tenure reform to enable and encourage home ownership by Aboriginal and Torres Strait Islander Australians. Amendments to land rights legislation have created the potential for varied levels of private property rights on Aboriginal land. Indigenous land ownership in other states and territories is determined by separate legislation in each jurisdiction. More information on Indigenous land tenure is included in section 9.2.

### **Living in a home owned by a member of the household**

The proportion of Aboriginal and Torres Strait Islander adults living in a home owned, with or without a mortgage, by a member of their household increased from 21.5 per cent in 1994 to 27.4 per cent in 2002, and 30.1 per cent in 2012-13 (table 9A.3.3). A marked increase in the proportion of Aboriginal and Torres Strait Islander adults living in homes owned with a mortgage (an increase of 11.6 percentage points) offset a decrease in the proportion living in homes owned outright (a decrease of 3.0 percentage points).

Earlier data are not available, but the proportion of non-Indigenous Australians living in a home owned, with or without a mortgage, by a member of their household decreased from 73.7 per cent in 2002 to 71.8 per cent in 2011-12 (table 9A.3.2).

**Figure 9.3.1 Proportion of people aged 18 years and over living in homes owned with or without a mortgage, by remoteness, 2011–13<sup>a,b,c,d</sup>**

<sup>a</sup> The 2011–13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012–13 AATSIHS (NATSIHS component). Data for non-Indigenous Australians are from the 2011–13 AHS (NHS component for the period 2011–12). <sup>b</sup> Data are not available for non-Indigenous people in very remote areas from the 2011–12 NHS. <sup>c</sup> Comprises participants in rent/buy schemes and those living in a household in which payments were being made on mortgages or secured loans towards the purchase of the dwelling. <sup>d</sup> Error bars represent 95 per cent confidence intervals around each estimate.

*Sources:* ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2012–13; ABS (unpublished) National Health Survey 2011–12; tables 9A.3.1–2.

In 2011–13, a lower proportion of Aboriginal and Torres Strait Islander adults (30.1 per cent) than non-Indigenous adults (71.8 per cent) lived in a home owned, with or without a mortgage, by a member of their household (figure 9.3.1). For Aboriginal and Torres Strait Islander Australians, this proportion was higher in major cities (38.4 per cent), inner regional (38.1 per cent) and outer regional (29.7 per cent) areas than in remote (19.7 per cent) or very remote (5.1 per cent) areas. There were no significant differences in the proportions for non-Indigenous Australians across remoteness areas (noting that the data source did not survey non-Indigenous people in very remote areas) (figure 9.3.1).

Tables 9A.3.5–8 contain additional data from the 2011 Census on Aboriginal and Torres Strait Islander and non-Indigenous Australians living in a home owned by a member of the household, by State and Territory, remoteness, age and sex.

---

## Households owning or purchasing a home

The proportion of Aboriginal and Torres Strait Islander *households* owning or purchasing a home (as opposed to the proportion of *people*) is an indicator in the National Affordable Housing Agreement (NAHA).

In 2012-13, almost one-third (31.7 per cent) of Aboriginal and Torres Strait Islander households owned or were purchasing a home, similar to the proportion in 2008 (32.5 per cent) (tables 9A.3.9–10). The proportion of Aboriginal and Torres Strait Islander households that owned or were purchasing a home in 2012-13 was higher in capital cities (35.4 per cent) than all other areas combined (29.5 per cent), and higher for households with mortgages (22.8 per cent) than for those without (8.9 per cent) (tables 9A.3.9 and 9A.3.12).

## Rental housing

Data from the 2011 Census indicate that, nationally, around one-third (33.1 per cent) of Aboriginal and Torres Strait Islander households were renting privately (compared with 24.7 per cent of non-Indigenous households). A further 21.5 per cent of Aboriginal and Torres Strait Islander households were living in housing provided by a State/Territory housing authority (compared with 3.6 per cent of non-Indigenous households) and 4.7 per cent of Aboriginal and Torres Strait Islander households were living in housing provided by an Indigenous/community housing organisation/church group (compared to 0.5 per cent of non-Indigenous households) (AIHW 2013, p. 93). More information on social housing provided to Aboriginal and Torres Strait Islander people is included in the annual Report on Government Services (SCRGSP 2014).

Historically, in remote areas, a high proportion of houses are located on communally held Aboriginal and Torres Strait Islander owned land, and managed by community housing providers that rent houses to families and individuals. In some regions, this arrangement led to a lack of clear responsibility for the maintenance of the asset itself, which in turn contributed to a reduced occupancy span from an expected 30 years to around seven years. Through the National Partnership Agreement on Remote Indigenous Housing, governments are securing tenure over community titled land with long term leases and introducing standardised public housing-like arrangements (Australian Government 2013; Habibis, Phillips and Verdouw 2013).

## Future directions in data

Data for the main measures for this indicator are sourced from the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS) and National Aboriginal and Torres Strait Islander Social Survey (NATSISS). Data from these surveys are available every three years. Supplementary data are available from the Census on a five yearly cycle.

## 9.4 Income support<sup>11</sup>

### Box 9.4.1 Key messages

- From 2002 to 2012-13, there were marked decreases in the proportions of Aboriginal and Torres Strait Islander Australians aged 18–64 years whose main source of income was government pensions/allowances (from 49.5 per cent to 45.6 per cent) and Community Development Employment Projects (CDEP)/other cash income (from 14.9 per cent to 4.7 per cent), with a corresponding increase in the proportion whose main source of income was employee income (from 32.2 per cent to 41.3 per cent) (table 9A.4.1).
- From 2002 to 2012-13, the proportion of Aboriginal and Torres Strait Islander Australians in remote/very remote areas with CDEP as their main source of income decreased from 31.5 per cent to 7.2 per cent, with increases in the proportions for employee income (from 20.5 per cent to 34.1 per cent) and government pensions/allowances (from 42.2 per cent to 47.0 per cent) (figure 9.4.2).
- From 2002 to 2011-12, the proportion of non-Indigenous Australians whose main source of income was employee income fluctuated with no clear trend (62.2 per cent in 2011-12), while the proportion for government pensions/allowances decreased (from 19.6 per cent to 13.2 per cent). However, from 2004-05, there was a large increase in 'not stated' responses (figure 9.4.1).
- From 2003 to 2013, there was a decrease in the proportion of Aboriginal and Torres Strait Islander Australians aged 15–64 years on Parenting Payment Single (from 9.3 per cent to 7.3 per cent) and an increase in Newstart Allowance (from 10.0 per cent to 13.4 per cent). From 2003 to 2011 the proportion receiving Disability Support Pension almost doubled (from 5.5 per cent to 10.4 per cent), but remained stable since (10.6 per cent in 2013) (figure 9.4.4).

### Box 9.4.2 Measures of income support

There are two main measures for this indicator.

- *Personal cash income* is defined as the proportion of people aged 18–64 years by main source of personal cash income. The main data source is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS) with the most recent data available for 2012-13 (all jurisdictions; remoteness). Data for the non-Indigenous population are sourced from the Australian Health Survey (AHS)/National Health Survey (NHS), with the most recent data for 2011-12. Indicators using both AATSIHS (2012-13) and AHS (2011-12) are referenced as 2011–13.

(continued next page)

---

<sup>11</sup> The Steering Committee notes its appreciation to Ms Heron Loban, James Cook University, who reviewed a draft of this section of the report.

---

**Box 9.4.2 (continued)**

- *People receiving income support payments* is defined as the proportion of people aged 15–64 years receiving income support payments by payment type. The main data source is Centrelink administrative data with the most recent data available for 2013 (all jurisdictions; sex; remoteness).

Results from the survey and administrative data are not directly comparable.

Reliance on income support for those of the working age population is a key indicator of social and economic wellbeing. Historically, Aboriginal and Torres Strait Islander Australians have been over-represented in the Australian income support system. A range of adverse socioeconomic conditions contribute to this high dependence on income support, including poor standards of health, lack of employment opportunities in some local labour markets and lower levels of educational attainment (DEEWR 2009). Low income (often in the form of income support) is associated with a wide range of disadvantages including poor health, shorter life expectancy, poor education, substance abuse, reduced social participation, crime and violence (AHMAC 2012). Welfare dependence was cited by the Cape York Institute (CYI) as attributing to social breakdown in Cape York (FaHCSIA 2012).

Income support is available to all eligible Australians to ensure that they have adequate levels of income to support themselves and their dependents. Income support accounts for the largest component of welfare provided by the Australian Government, with over five million direct beneficiaries at any one time (DSS 2013). Income support payments are paid by Centrelink to the aged, people with a disability, carers, youth and students, families with children, the unemployed, and widows (DHS 2014a).

A relatively high proportion of Aboriginal and Torres Strait Islander Australians receive income support. The longest running Indigenous-specific program is the Community Development Employment Projects (CDEP), which until 30 June 2009 allowed some Aboriginal and Torres Strait Islander people to receive CDEP wages rather than unemployment benefits. From 1 July 2009, new CDEP participants received income support payments (such as Newstart) rather than wages, which has accounted for a shift in the recorded source of income for some Aboriginal and Torres Strait Islander participants. From 1 July 2013, CDEP was replaced by the Remote Jobs and Communities Program (RJCP) in 60 remote regions across Australia. Eight locations that were classified as non-remote had their existing CDEP funding agreements extended for up to 12 months (Australian Government 2013) but from 1 July 2014 participants in these locations have been transitioned to income support payments and are now serviced by mainstream employment service providers.

Recent Aboriginal and Torres Strait Islander welfare reform initiatives include income management, under which part of a person's income support and family assistance payments are directed towards priority items such as food, housing, education, clothing,

---

health care and utilities (Buckmaster and Ey 2012). There are a number of different forms of income management:

- Income management was introduced in the NT from 2007 as part of the Northern Territory Emergency Response (NTER), now referred to as Closing the Gap — Northern Territory. From 1 July 2010, NTER income management was replaced by a new model termed New Income Management, extended to all welfare recipients, targeting long term recipients of certain income support payments, recipients of other income support payments who are considered vulnerable, and those who volunteer to participate. It subsets 50 to 70 per cent of fortnightly income support payments to be spent on priority needs (ANAO 2013). As part of the 2014-15 Budget, income management will continue until June 2015 (DSS 2014).
- The Cape York Welfare Reform project in Queensland, coordinated by the Cape York Institute in partnership with the Queensland and Australian Governments, includes a different form of income management, under which a Family Responsibilities Commission (FRC) can on occasions direct all or part of a person's income support payments to be managed by Centrelink to pay for the priority needs of their family. The trial commenced in July 2008, and a 2012 evaluation found that income management initiated by the FRC is helping to ensure the basic needs of individuals and families are being met (FaHCSIA 2012). In 2013, the Australian Government indicated that it would continue income management as part of this project for another two years (Andrews and Scullion 2013).
- Under the Child Protection Measure, a jurisdictional Child Protection Authority can ask Centrelink to manage a person's income support payments in situations where it is believed a child is at risk of neglect (Buckmaster and Ey 2012).
- To support people at risk, some State and Territory agencies have the power to refer people for income management in a similar way to which the child protection measure operates (Buckmaster and Ey 2012). For example, in the Anangu Pitjantjatjara Yankunytjatjara Lands in SA, a young person who is not a full time student or apprentice and who has received the Unreasonable to Live at Home payment may have their income managed (DHS 2014b).
- Voluntary income management is also available to income support recipients. The Measure has operated in WA since 2008 and the NT since 2010, and from July 2012 was expanded to include five trial sites across Australia, including within NSW, Queensland, SA and Victoria (Buckmaster and Ey 2012).

While income management is available to non-Indigenous Australians, it is largely provided to Aboriginal and Torres Strait Islander Australians. As at 6 April 2012, a total of 17 567 people in the NT were subject to income management, with around 90 per cent identifying as Indigenous. In WA, 232 people were subject to income management under the child protection measure, with around 60 per cent identifying as Indigenous. Also in WA, a total of 1147 people had volunteered to have their Centrelink payments subject to

income management, with around 74 per cent identifying as Indigenous (Buckmaster, Ey and Klapdor 2012).<sup>12</sup>

## Personal cash income

In 2012-13, government pensions and allowances (45.6 per cent) was the main source of personal cash income for Aboriginal and Torres Strait Islander Australians aged 18–64 years, followed by employee income (41.3 per cent) (table 9.4.1).

Figure 9.4.1 **Main sources of personal cash income, people aged 18–64 years, 2002 to 2011–13<sup>a,b,c</sup>**

<sup>a</sup> In 2012-13, CDEP is only able to be separately identified for Indigenous Australians in remote and very remote areas. Therefore, for comparability CDEP is presented in this figure combined with other cash income. <sup>b</sup> Relative standard errors and 95 per cent confidence intervals should be considered when interpreting these data, and are available in attachment table 9A.4.1. <sup>c</sup> The 2011–13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012-13 AATSIHS. Data for non-Indigenous Australians are from the 2011–13 AHS (for the period 2011-12).

*Sources:* ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2002; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); ABS (unpublished) General Social Survey 2002; ABS (unpublished) National Health Survey 2004-05 and 2007-08; ABS (unpublished) Australian Health Survey 2011–13 (2011-12 NHS component); table 9A.4.1.

Between 2002 and 2012-13, there has been a significant increase in the proportion of Aboriginal and Torres Strait Islander Australians whose main source of personal cash

<sup>12</sup> FaHCSIA, Income management summary—6 April 2012, tabled document, Senate Community Affairs Legislation Committee, Budget Estimates 2012–13.

income was employee income (from 32.2 per cent to 41.3 per cent), with a corresponding decrease in government pensions and allowances (from 49.5 per cent to 45.6 per cent) and CDEP/other cash income (from 14.9 per cent to 4.7 per cent) (figure 9.4.1).

In 2011-12, employee cash income was the main source of personal income for non-Indigenous Australians (62.2 per cent). From 2002 to 2011-12, this proportion fluctuated with no clear trend, while the proportion for government pensions/allowances decreased (from 19.6 per cent to 13.2 per cent). However from 2004-05, there was a large increase in 'not stated' responses (figure 9.4.1).

**Figure 9.4.2 Main source of personal cash income for Indigenous people aged 18–64 years in remote/very remote areas, 2002 to 2012-13<sup>a,b,c</sup>**

<sup>a</sup> Error bars represent 95 per cent confidence intervals around each estimate. <sup>b</sup> Remote areas include 'remote' and 'very remote'. <sup>c</sup> In 2012-13, CDEP is only able to be separately identified in remote and very remote areas.

*Sources:* ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2002; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); table 9A.4.3.

In 2012-13, income from CDEP was only able to be separately identified in remote and very remote areas. In remote and very remote areas from 2002 to 2012-13, the proportion of Aboriginal and Torres Strait Islander Australians aged 18–64 years whose main source of personal cash income was CDEP decreased, from 31.5 per cent to 7.2 per cent (24.3 percentage points) (figure 9.4.2).

The majority of the change in main income source over this period is reflected in an increased proportion of Aboriginal and Torres Strait Islander Australians with employee

income (from 20.5 per cent to 34.1 per cent) with a smaller increase in the proportion receiving government pensions and allowances (from 42.2 per cent to 47.0 per cent) (figure 9.4.2).

Data on main sources of personal cash income for people aged 18–64 years are also reported by State and Territory (tables 9A.4.1-2) and by remoteness (table 9A.4.3). Data are also reported on sources of cash income for Aboriginal and Torres Strait Islander *households* in tables 9A.4.7–9. Data on people aged 18–64 years receiving government cash pensions and allowances are also reported by sex and State and Territory (table 9A.4.4), sex by remoteness (table 9A.4.5) and by sex by age group (table 9A.4.6).

### People receiving income support payments — administrative data

The following figures use Centrelink administrative data to calculate the proportion of Aboriginal and Torres Strait Islander and non-Indigenous Australians aged 15–64 years receiving various types of income support payments. As individuals can receive multiple payment types, these data cannot be aggregated.

Figure 9.4.3 **People aged 15–64 years receiving income support payments by selected payment types, 2013<sup>a,b,c</sup>**

<sup>a</sup> Indigenous identification in Centrelink data is voluntary. People whose Indigenous status is unknown are included in the counts for non-Indigenous people. <sup>b</sup> Non-Indigenous people are not eligible to receive Abstudly. <sup>c</sup> All data are point in time data. Depending on the particular payment type data are reported at various points in time across June.

Sources: Centrelink (unpublished); ABS 2013, *Australian Demographic Statistics, June 2013* Cat. no. 3101.0; ABS 2014, *Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001–2026*, Cat. no. 3238.0; table 9A.4.10.

In 2013, a higher proportion of Aboriginal and Torres Strait Islander Australians than non-Indigenous Australians received each of the selected income support payment types. Newstart Allowance was the most common income support payment received by Aboriginal and Torres Strait Islander Australians (13.4 per cent) followed by Disability Support Pension (10.6 per cent) and Parenting Payment Single (7.3 per cent). Disability Support Pension was the most common income support payment received by non-Indigenous Australians (5.0 per cent) followed by Newstart Allowance (4.0 per cent) (figure 9.4.3).

**Figure 9.4.4 Indigenous people aged 15–64 years receiving income support payments, by payment type, 2003 to 2013<sup>a,b</sup>**

<sup>a</sup> Indigenous identification in Centrelink data is voluntary. People whose Indigenous status is unknown are included in the counts for non-Indigenous people <sup>b</sup> All data are point in time data. Depending on the particular payment type, data are reported at various points in time across June.

Sources: Centrelink (unpublished); ABS 2013, *Australian Demographic Statistics, June 2013*, Cat. no. 3101.0; ABS 2014, *Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001–2026*, Cat. no. 3238.0; table 9A.4.10.

From 2003 to 2013, for Aboriginal and Torres Strait Islander Australians aged 15–64 years:

- the proportion receiving Parenting Payment Single decreased from 9.3 per cent to 7.3 per cent
- the proportion receiving Disability Support Pension has almost doubled (increased from 5.5 per cent to 10.4 per cent in 2011, and has been relatively stable since, at 10.6 per cent in 2013)
- the proportion receiving Newstart Allowance increased from 10.0 per cent to 13.4 per cent (figure 9.4.4).

---

Data on people receiving income support payments for people aged 15–64 years are also available by State and Territory (tables 9A.4.11–12), by sex (table 9A.4.10) and by remoteness (tables 9A.4.13–14).

## Future directions in data

From 1 July 2014, CDEP has been replaced by the RJCP, with the payment of CDEP wages scheduled to cease from July 2017. Identification of RJCP in the ABS surveys is critical to monitoring the impact of future changes in job placement programs.

# Chapter 9      Economic participation — attachment

The tables in this file accompany the report, *Overcoming Indigenous Disadvantage: Key Indicators 2014*, prepared by the Steering Committee for the Review of Government Service Provision. Background and definitions are available in the report, which is available on the Review website ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)).

This file is available in both Microsoft Excel and Adobe PDF formats on the Review website ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)). Users without Internet access can contact the Secretariat to obtain these tables (details inside the front cover of the report).

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Non-Indigenous data for very remote areas are not available (they were not collected in the National Health Survey 2004-05 and National Health Survey 2007-08).

(c) The sample size in the NT was considered too small to produce reliable estimates for the NT in the National Health Survey 2004-05, but NT records in the survey have been attributed appropriately to national estimates.

na Not available.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Australia total includes Other Territories.

(c) Includes 'Aboriginal', Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

(d) Total employed also includes persons who worked zero hours or who did not state their hours worked.

(e) Australia total also includes Migratory/Offshore/Shipping and No Usual Address. For 2001, also includes Inadequately Described/Not Stated. Remoteness Area boundaries based on geography in existence at the time of each Census.

(f) Full-time comprises employed persons who worked 35 or more hours.

(g) Part-time comprises employed persons who worked 1-34 hours.

(h) Also includes persons who did not state their Indigenous Status.

– Nil or rounded to zero. .. Not applicable.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15–64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which are cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

Source: ABS (unpublished) derived from the 2011 Census of Population and Housing.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which are cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

Source: ABS (unpublished) derived from the 2006 Census of Population and Housing.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Proportions presented in this table are of Total employed people aged 15-64 years, which includes people with inadequately described or not stated occupations. The proportion of people whose occupation was known, which are cited in chapter 9.1, can be calculated using Total Classifiable/Stated as the denominator.

(c) Includes 'Aboriginal', Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

Source: ABS (unpublished) derived from the 2001 Census of Population and Housing.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

TABLE 9A.1.17

Table 9A.1.17 **Employed Indigenous people aged 18–64 years, by 2006 ANZSIC classification of industry, by State and Territory, by sex, by remoteness (non-remote areas), by age group, 2012-13 (a), (b) (Survey data)**

<i>Public Adminis- tration and Safety</i>	<i>Health Care and Social Assistance</i>	<i>Administrative and Support Services and Other Services</i>	<i>Construction</i>	<i>Manufacturing</i>	<i>Retail trade</i>	<i>Rental, Hiring and Real Estate Services</i>	<i>Education and Training</i>	<i>Other industries (c), (d)</i>
---	--	---	---------------------	----------------------	-------------------------	--	---------------------------------------	--

(b) The 2006 ANZSIC has different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government Administration and Defence' = Public Administration and Safety; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.

(c) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(d) Excludes people in employment who did not adequately describe the industry of their employment.

**np** Not published. – Nil or rounded to zero.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.

**Table 9A.1.18 Employed non-Indigenous people aged 18–64 years, by 2006 ANZSIC classification of industry, by State and Territory, by sex, by remoteness (non-remote areas), by age group, 2011-12 (a), (b) (Survey data)**

<i>Public Adminis- tration and Safety</i>	<i>Health Care and Social Assistance</i>	<i>Administrative and Support Services and Other Services</i>	<i>Construction</i>	<i>Manufacturing</i>	<i>Retail trade</i>	<i>Rental, Hiring and Real Estate Services</i>	<i>Education and Training</i>	<i>Other industries (c), (d)</i>
---	--	---	---------------------	----------------------	-------------------------	--	---------------------------------------	--

(b) The 2006 ANZSIC has different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government Administration and Defence' = Public Administration and Safety; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.

(c) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(d) Excludes people in employment who did not adequately describe the industry of their employment.

<b>Total 18–64</b>	<b>0.6</b>	<b>0.8</b>	<b>0.8</b>	<b>0.8</b>	<b>0.8</b>	<b>0.9</b>	<b>0.4</b>	<b>0.7</b>	<b>1.3</b>

(a) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use.

(b) The 2006 ANZSIC had different classifications and groupings to the 1993 ANZSIC. The following differing categories were used: 'Government administration and defence' = Public administration and defence; 'Health and Community Services' = Health Care and Social Assistance; 'Personal and Other Services' = Administrative and Support Services and Other Services; 'Property and Business Services' = Rental, Hiring and Real Estate Services; and 'Education' = Education and Training.

(c) Other industries include agriculture, forestry and fishing; mining; electricity, gas, water and waste services; wholesale trade; accommodation and food services; transport, postal and warehousing; information media and telecommunications; finance and insurance services; professional, scientific and technical services; and arts and recreation services.

(d) Excludes people in employment who did not adequately describe the industry of their employment.

**np** Not published.

(a) Areas are based on the geographic extent of the determination area as per the court's decision. Parts of these determinations may not be included on the National Native Title Register at this time. Where native title has been extinguished within a determination area and it has been possible to map these areas then they have been included in the calculations.

(b) Areas based on spherical calculation from spatial data records and are indicative only. From 2011 onwards areas calculated using Australian Albers projection (EPSG 3577).

(c) Commonwealth waters where determinations of native title have been made.

(d) Areas include islands adjacent to the mainland — figures sourced from Geoscience Australia (1993).

na Not available. .. Not applicable. – Nil or rounded to zero.

Source: National Native Title Tribunal (unpublished).

Proportion of all Australian land where native title exists in full or in part	%	—	—	0.3	0.4	99.3	..	100.0

TABLE 9A.2.4

Table 9A.2.4 **Determinations of native title by remoteness area, 2007 to 2013 (a), (b)**

	<i>Unit</i>	<i>Major cities</i>	<i>Inner regional</i>	<i>Outer regional</i>	<i>Remote</i>	<i>Very remote</i>	<i>Offshore</i>	<i>Aust</i>
<b>Total area of remoteness area (b), (c)</b>	<b>km<sup>2</sup></b>	<b>17 401</b>	<b>243 371</b>	<b>833 179</b>	<b>1 018 305</b>	<b>5 579 768</b>	<b>..</b>	<b>7 692 024</b>
Proportion of remoteness area land where native title determined to exist in full or part	%	—	—	0.2	0.3	11.9	..	8.7
Proportion of remoteness area land where native title determined not to exist	%	—	0.4	0.5	0.6	0.6	..	0.6
Proportion of land subject to determinations	%	—	0.4	0.8	0.9	12.4	..	9.2

(a) Areas are based on the geographic extent of the determination area as per the Court's decision. Parts of these determinations may not be included on the National Native Title Register at this time. Where native title has been extinguished within a determination area and it has been possible to map these areas then they have been included in the calculations.

(b) Remoteness regions sourced from ABS — Australian Standard Geographical Classification Digital Boundaries Australia 2006. The remoteness classification extended seaward to include determinations over State, Territory and Commonwealth waters. Data on total land area by remoteness regions differs to other tables that define remoteness regions sourced from ABS — Australian Standard Geographical Classification Digital Boundaries Australia 2001.

(c) Remoteness area figures proportioned to total land area sourced from Geoscience Australia (1993).

(d) Remoteness regions and areas sourced from ABS — Australian Statistical Geography Standard (ASGS): Volume 5 - Remoteness Structure 2011.

**na** Not available. .. Not applicable. — Nil or rounded to zero.

(a) Areas are normally based on the geographic extent of the Indigenous Land Use Agreement (ILUA) area, however, where specific exclusions are indicated, these are normally mapped and not included in the area calculation. As more than one ILUA can cover the same area (this is specifically relevant where body corporate agreements are developed) the total area of land covered has also been calculated.

(b) Areas from 2011 onwards calculated using Australian Albers projection (EPSG 3577) from spatial data records and are indicative only.

(c) Areas include islands adjacent to the mainland – figures sourced from Geoscience Australia (1993).

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Data are not age standardised.

(c) Includes employers and own account workers.

(d) Data for non-Indigenous are from the 1995 National Health Survey.

.. Not applicable. **np** Not published.

	Unit	NSW	Vic	Qld	WA	SA	Tas	ACT	NT	Aust. (c)
--	------	-----	-----	-----	----	----	-----	-----	----	-----------

(b) Geography is based on boundaries in existence at the time of each Census.

(c) Australia total includes Other Territories.

(d) Self Employed refers to the following: for 2001, comprises persons with a Labour Force Status of "Employer" or "Own Account Worker"; for 2006 and 2011, comprises persons with an Employment Type of "Owner managers or incorporated enterprises" or "Owner managers of unincorporated enterprises".

(e) Includes 'Aboriginal', 'Torres Strait Islander' and 'Both Aboriginal and Torres Strait Islander'.

(f) Total for Australia also includes Migratory/Offshore and No Usual Address. For 2001 also includes inadequately described/not stated.

(g) Total includes persons who did not state their Indigenous Status.

– Nil or rounded to zero.

- (a) Estimates with a relative standard error (RSE) of 25 per cent to 50 per cent should be interpreted with caution. A 95 per cent confidence interval (CI) is also reported against each estimate.
- (b) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).
- (c) Comprises participants in rent/buy schemes and those living in a household in which payments were being made on mortgages or secured loans towards the purchase of the dwelling.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) CDEP as a principal source of income was not collected in Victoria or ACT.

(c) Proportions are calculated using unrounded estimates and in some cases will not match the proportion derived using the rounded numbers (to the nearest hundred) provided in the table.

(d) Indigenous to non-Indigenous rate ratios have been calculated by dividing the proportion of Indigenous persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(e) For 2012-13 NATSIHS, Other cash income includes: Owners of unincorporated businesses, participants in CDEP programs, and any other source of regular income.

(f) Includes persons whose main source of cash income was not stated or not known, and those who had no source of income.

Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate.

(b) Victoria and ACT do not have a Remote or Very Remote classification.

(c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(d) Other cash income includes unincorporated business cash income and any other principal source of personal income

(e) Includes persons whose main source of cash income was not stated or not known, and those who had no source of income.

(a) Estimates with a relative standard error (RES) of between 25 and 50 per cent should be used with caution. Estimates with a relative standard error over 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval (CI) is also reported against each estimate.

(b) Indigenous to non-Indigenous rate ratios have been calculated by dividing the proportion of Indigenous persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(c) The 2012-13 National Aboriginal and Torres Strait Islander Health Survey does not provide data for this indicator for non-remote areas in Australia.

(d) For the Indigenous population, includes unincorporated business income, property (rental income) and other regular sources.

(e) For the non-Indigenous population, includes profit or loss from own unincorporated business, profit or loss from rental property, dividends or interest, child support or maintenance, superannuation or annuity, worker's compensation and other regular source.

(f) Includes persons whose main source of cash income was not stated or not known, and those who had no source of income.

(g) Non-Indigenous data for very remote areas of Australia are not available from the 2007-08 National Health Survey.

(h) For the Indigenous population, includes unincorporated business, property, other pension, and other regular sources.

(i) Non-Indigenous data for remote and very remote areas of Australia are not available from the 2002 General Social Survey.

.. Not applicable. **na** Not available.

(a) Estimates with a relative standard error (RES) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate.

(b) The number and proportion of people in receipt of income support, according to their Indigenous status, sex and State/Territory.

(c) Non-Indigenous data for very remote areas of Australia are not available from the 2011-13 Australian Health Survey.

(d) Indigenous to non-Indigenous rate ratios have been calculated by dividing the proportion of Indigenous persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(e) Non-Indigenous data for very remote areas of Australia are not available from the 2007-08 National Health Survey.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is reported against each estimate.

(b) The number and proportion of people in receipt of income support, according to their Indigenous status, sex, and remoteness area.

(c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(d) Indigenous to non-Indigenous rate ratios have been calculated by dividing the proportion of Indigenous persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. A 95 per cent confidence interval (CI) is reported against each estimate.

(a) The number and proportion of people in receipt of income support, according to their Indigenous status, sex and age group.

(b) Indigenous to non-Indigenous rate ratios have been calculated by dividing the proportion of Indigenous persons with certain characteristics by the proportion of non-Indigenous persons with the same characteristics.

.. Not applicable.

2004-05				2012-13			
<i>Number</i>	<i>Proportion</i>	<i>RSE</i>	<i>95 per cent CIs</i>	<i>Number</i>	<i>Proportion</i>	<i>RSE</i>	<i>95 per cent CIs</i>
' 000	%	%	±	' 000	%	%	±

(a) Estimates with a relative standard error (RSE) of between 25 per cent to 50 per cent should be used with caution. Estimates with a relative standard error greater than 50 per cent are considered too unreliable for general use. A 95 per cent confidence interval is also reported against each estimate.

(b) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(c) In 2012-13, this indicator is only available for Remote areas in Australia. Refer to Table 9A.4.8.

(d) Includes unincorporated business cash income, CDEP and any other regular income source for household.

(e) Includes source of cash income not stated or not known.

(f) Sum of components may be greater than total as households may have reported more than one source of income.

– Nil or rounded to zero. .. Not applicable. **np** Not published

(a) Recipients for whom Indigenous status was unknown have been reported where data is available. For all other payments, recipients of unknown status are included as non-Indigenous.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June in the relevant year.

(c) Proportions are of the Indigenous/non-Indigenous/total male, female or persons population aged 15-64 years.

(d) Metadata for the data presented in this table are provided at table 9A.4.15.

(e) Recipients of age pension, disability support pension, wife pension (age), wife pension (DSP), carer payment and special benefit payments whose Indigenous status was unknown are not included in 2010 and 2011. In 2009 and prior to 2009, the non-Indigenous category includes recipients whose Indigenous status was unknown.

(e) Recipients of age pension, disability support pension, wife pension (age), wife pension (DSP), carer payment and special benefit payments whose Indigenous status was unknown are not included in 2010 and 2011. In 2009 and prior to 2009, the non-Indigenous category includes recipients whose Indigenous status was unknown.

(f) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as indigenous. These data may therefore represent an undercount. Source: Department of Human Services administrative data (Blue Book dataset).

– Nil or rounded to zero. **na** Not available. **..** Not applicable. **np** Not published.

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June and July in the relevant year.

(c) The Australian total includes population where State/Territory was unknown and where an individual resides internationally.

(d) Proportions are of the Indigenous/non-Indigenous/total male, female or persons population aged 15-64 years.

(e) Metadata for the data presented in this table are provided at table 9A.4.15.

(f) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as indigenous. These data may therefore represent an undercount. Source: Department of Human Services administrative data (Blue Book dataset).

– Nil or rounded to zero. **na** Not available. **..** Not applicable. **np** Not published.

Source: Centrelink (unpublished) administrative data.

TABLE 9A.4.12

Table 9A.4.12 **Non-Indigenous population aged 15–64 years receiving income support payments, by State and Territory, 2003 to 2013 (number) (a), (b), (c), (d), (e), (f)**

	Unit	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
Abstudy	%	na	na	na	na	na	na	–	–	na	na	na
Youth Allowance	%	2.9	2.8	2.7	2.5	2.3	2.2	2.4	2.6	2.7	2.3	2.3

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June and July in the relevant year.

(c) The Australian total includes population where State/Territory was unknown and where an individual resides internationally.

(d) Proportions are of the Indigenous/non-Indigenous/total male, female or persons population aged 15-64 years.

(e) Metadata for the data presented in this table are provided at table 9A.4.15.

(f) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as indigenous. These data may therefore represent an undercount. Source: Department of Human Services administrative data (Blue Book dataset).

– Nil or rounded to zero. **na** Not available. .. Not applicable. **np** Not published.

(a) Non-Indigenous category includes population where Indigenous status was unknown.

(b) All data are point in time data. Depending on the particular payment type data are reported at various points in time across June and July in the relevant

(c) Metadata for the data presented in this table are provided at table 9A.4.15.

(d) Recipients of Parenting Payment Partnered/Parenting Payment Single/Youth Allowance (other)/ Youth Allowance (student)/Youth Allowance (apprentice)/ABSTUDY who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system. Recipients of Sickness Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and not in receipt of a zero rate of payment. Recipients of Newstart Allowance/ Partner Allowance / Widow Allowance who are determined to be current (i.e. entitled to be paid) on the Centrelink payment system and are not in receipt of CDEP Participation Supplement or a zero rate of payment. Indigenous recipients include only those who have voluntarily identified as indigenous. These data may therefore represent an undercount. Source: Department of Human Services administrative data (Blue Book dataset).

**na** Not available. **..** Not applicable. **np** Not published.

**Table 9A.4.15 Metadata for Centrelink income support payments**

Confidentiality Provision	All cells that have a value of less than 20, including zero, have been changed to display not published (np). This rule has been employed for privacy reasons. Where the total fields are included these will only have a value when it does not make it possible to work out the value of any "<20" fields. Not published (np) will be inserted in cells when it may be possible to estimate customer numbers. This will prevent information from being broken down or manipulated to the degree that individuals may be identified, and to cover the legal requirement to protect an individuals privacy.
Point in Time	All data is point in time data. Depending on the particular payment type, data are reported at various points in time across June and July of the particular year.
Data Source	The source of the data can be found by the following example below: Centrelink Populations 2003 Qtr 3 (05-09-03) Ver-01 Table 1 Postcode by Language of Birth for Customers
Age Pension	Income support payment for customers that have reached retirement age. Men must be aged 65 years or over and women must be 63 ½ or over.
Austudy	Income support payment for customers aged 25 years or more and studying or undertaking an Australian Apprenticeship full-time. Customers must be aged 25 or over to qualify
Carer Payment	Is an income support payment for people who are unable to support themselves through participation in the workforce while caring for someone with a disability, severe medical condition or who is frail
Disability Support Pension	Is an income support payment for customers who have a physical, intellectual or psychiatric impairment that prevents them from working. Customers must be aged 16 or over to qualify.
Newstart Allowance	Is an income support payment for customers who are looking for work and allows them to participate in activities designed to increase their chances of finding work. Customers must be aged 22 to 64 to qualify.
Newstart Mature Age Allowance	From 20 October 2003 Newstart Mature Age Allowance was closed to new claimants. The payment ceased in October 2008.
Parenting Payment	Is an income support payment for customers who are primary carers of young children.
Partner Allowance	Is an income support payment is for customers who face barriers to finding work because they have had limited participation in the workforce and their partner is getting income support. Partner allowance was closed to new claimants on 20 October 2003.
Sickness Allowance	Is an income support payment for customers who are employed and who are temporarily unable to work due to a medical condition. Customers must be aged 21 to 64 years to qualify.
Special Benefit	Is an income support payment for customers who are in severe financial need due to circumstances beyond their control.

**Table 9A.4.15 Metadata for Centrelink income support payments**

Widow Allowance	Income support payment for women who were born on or before 1 July 1955 and have become widowed, divorced or separated later in life and have no recent workforce experience.
Widow B Pension	Income support payment to ensure customers have an adequate level of income if they are an older widow who does not qualify for parenting payment, have limited means, and have lost the financial support of their partner. There have been no new grants of Widow B pension since 20 March 1997.
Wife Pension	Income support payment for the female partner of a Disability Support Pensioner or Age Pensioner. There have been no new grants of Wife Pension since 1 July 1995.
Youth Allowance	Is an income support payment for young people who are studying, undertaking training or an Australian Apprenticeship, looking for work or sick. Customers must be aged 15 to 24 to qualify.
Indigenous status	<p><u>Indigenous:</u> Customer Identified as being Indigenous Australian. This includes if the customer has identified himself or herself as being of Aboriginal, Torres Strait Islander or South Sea Islander origin. Please note that Centrelink officially defines Indigenous Australians as being of Aboriginal and/or Torres Strait Islander descent. Includes the following categories: Aboriginal; Aboriginal &amp; Torres Strait &amp; South Sea Islander; Aboriginal &amp; South Sea Islander; Both Aboriginal &amp; Torres Strait Islander; Torres Strait Islander; Torres Strait Islander &amp; South Sea Islander.</p> <p><u>Non-Indigenous:</u> Customer not Identified as being Indigenous Australian. Please note that it is optional for customers to identify as Indigenous so this limitation should be considered in any application or use of this information. This data may represent an undercount. Includes the following categories: not Aboriginal/Torres Strait but is South Sea Islander; not Aboriginal/Torres Strait/South Sea Islander; South Sea Islander; does not wish to declare if they are or are not Indigenous.</p>

# 10 Home environment

---

## Strategic areas for action

Better environmental health<sup>1</sup> can have positive outcomes for Aboriginal and Torres Strait Islander Australians, and is especially beneficial for children’s physical and emotional wellbeing.

The indicators in this chapter cover some factors that contribute to a healthy home environment and good environmental health for Aboriginal and Torres Strait Islander Australians:

- reducing overcrowding is associated with positive effects on health, family relationships and children’s education (section 10.1)
- improvements in environmental health can help reduce the spread of diseases that are linked to environmental causes (section 10.2)
- clean water and functional sewerage and electricity services, and housing of an acceptable standard, encourage and support healthy living practices (section 10.3).

The home environment affects other COAG targets and headline indicators:

- life expectancy (section 4.1)
- young child mortality (section 4.2)
- disability and chronic disease (section 4.8)
- family and community violence (section 4.11).

Other COAG targets and headline indicators can directly influence the home environment:

- employment (section 4.6)

---

<sup>1</sup> Environmental health addresses the physical, chemical and biological factors external to a person which can potentially affect a person’s health.

- 
- household and individual income (section 4.9).

Outcomes in the home environment area can be affected by outcomes in several other strategic areas for action, or can influence outcomes in other areas:

- early child development (chapter 6)
- education and training (chapter 7)
- healthy lives (chapter 8)
- economic participation (chapter 9).

### Attachment tables

Attachment tables for this chapter are identified in references throughout this chapter by an 'A' suffix (for example, table 10A.1.1). These tables can be found on the Review web page ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)), or users can contact the Secretariat directly.

---

## 10.1 Overcrowding in housing<sup>2</sup>

### Box 10.1.1 Key messages

- Nationally, the proportion of Aboriginal and Torres Strait Islander Australians living in overcrowded households decreased from 27.0 per cent in 2004-05 to 22.6 per cent in 2012-13 (figure 10.1.1), including a decrease in overcrowding in very remote areas (from 63.4 per cent in to 53.3 per cent) (figure 10.1.2).
- Nationally, the proportion of Aboriginal and Torres Strait Islander adults reporting overcrowding as a stressor halved from 20.8 per cent in 2002 to 10.0 per cent in 2012-13 (figure 10.1.3).
- Less cramped living conditions has been linked to positive health, education and family outcomes for Aboriginal and Torres Strait Islander Australians.

### Box 10.1.2 Measures of overcrowding in housing

There is one main measure for this indicator. *Overcrowding in housing* is defined as the proportion of Aboriginal and Torres Strait Islander people, of all ages, who live in overcrowded houses. Supplementary data are provided for Aboriginal and Torres Strait Islander people aged 15 years and over (for comparable time series back to 2002).

Overcrowding is calculated according to the Canadian National Occupancy Standard (CNOS) for housing appropriateness (more detail can be found in box 10.1.3).

The main data source for this measure is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent available data for 2012-13 (all jurisdictions and remoteness). Supplementary data are also available from the ABS Census of Population and Housing, with the most recent data for 2011 (all jurisdictions by remoteness). Survey and Census data are not directly comparable.

Supplementary information is also provided on overcrowding as a stressor.

In 2009, COAG agreed to the National Affordable Housing Agreement (NAHA), with one outcome being for Aboriginal and Torres Strait Islander people to have ‘the same housing opportunities as other Australians, and improved housing amenity and reduced overcrowding, particularly in remote areas and discrete communities’ (COAG 2009). The NAHA is supported by National Partnership agreements on homelessness and, for Aboriginal and Torres Strait Islander Australians, remote Indigenous housing. In remote and very remote areas in particular, it is more expensive and logistically more difficult to construct and maintain housing and associated infrastructure (COAG 2008; Fien and Charlesworth 2012).

---

<sup>2</sup> The Steering Committee notes its appreciation to the Working Group on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the report.

---

Better, less cramped living conditions have been linked to positive effects on Aboriginal and Torres Strait Islander health, education and family relationships:

- health — if a house is appropriately designed for the number of residents, the bathroom, adequate kitchen and laundry facilities make it easier to prevent the spread of infectious diseases and to encourage ‘healthy living practices’ (ABS and AIHW 2008; Australian Indigenous HealthInfoNet 2008). Healthy living practices are discussed further in section 10.2
- education — extra space gives children and young people opportunities for enough sleep and relaxation, and allows them to do homework and study without outside disruptions (Biddle 2007)
- family relationships — increase in control over living space, or additional space may help to reduce domestic tensions, leading to fewer instances of domestic violence (Baillie and Wayte 2006).

Cultural and social factors influence the way housing is used by different Aboriginal and Torres Strait Islander people and communities, and it is important to distinguish between culturally legitimate as opposed to harmful overcrowding (Birdsall-Jones and Corunna 2008). Households with many members, often of multiple generations, and including extended family, are not unusual in Aboriginal and Torres Strait Islander communities, and may be the preferred way of living for some families (AHMAC 2012). McDonald (2011), summarising the research and policy on Indigenous housing and the relationship to Closing the Gap, notes that larger Indigenous households also frequently encompass kin who are elderly, or people with mental or physical ill health, which presents additional stress and challenges.

Larger households may also increase social connectivity, which is associated with positive impacts on health (AHMAC 2012). Foster et. al’s (2011) research synthesis of housing and health evidence suggests that, if heads of Indigenous households have the ability to control and manage the available space (including the allocation of bedrooms), it ameliorates against some of the effects of overcrowding. Foster et. al. (2011) summarised Zubrick et.al’s (2006) work on the Western Australian Aboriginal Child Health Survey (WAACHS), which showed that children in larger households were ‘half as likely [to be] at risk of clinically significant behavioural and emotional difficulties as children in low-occupancy households’.

---

### Box 10.1.3    **Housing occupancy standard used by ABS**

There is no single standard measure for housing overcrowding. The ABS uses a standard which is sensitive to both household size and composition (based on the Canadian National Occupancy Standard). Using the following criteria to assess bedroom requirements, households requiring at least one additional bedroom are considered to be overcrowded:

- There should be no more than two persons per bedroom
- A household of one unattached individual may reasonably occupy a bed-sit (that is, have no bedroom)
- Couples and parents should have a separate bedroom
- Children less than five years of age of different sexes may reasonably share a bedroom
- Children five years of age or over of different sexes should not share a bedroom
- Children less than 18 years of age and of the same sex may reasonably share a bedroom

Single household members aged 18 years or over should have a separate bedroom (ABS 2011).

The housing occupancy standard used for this report will reflect the culture and preferences of some, but not all, Aboriginal and Torres Strait Islander people. For example, it does not account for the influence of climate and culture on living arrangements, which vary widely across Australia. In climatic conditions such as extreme heat, it is likely that all members of the household will occupy the most comfortable area of the house (DSS 2007). In warmer rural areas, people may live outside their houses rather than inside them at certain times of the year, and the standard does not take into account how verandahs or larger living spaces might be used (Pholeros, Rainow and Torzillo 1993).

The sizes of Aboriginal and Torres Strait Islander households and community populations can fluctuate dramatically. People may move to visit relatives, to avoid adverse weather events, to escape overcrowding or domestic violence, or to travel to access health and social services (Habibis et al. 2011). A shortage of affordable and flexible housing options may then lead travellers to overcrowded homes of relatives', public space dwelling and homelessness (Habibis et al. 2011). Some Aboriginal and Torres Strait Islander Australians reported to the ABS that they have family and cultural responsibilities in providing shelter, and that refusing visitors is considered culturally inappropriate, leading to crowded dwellings (ABS 2013).

## Overcrowding in housing

Figure 10.1.1 **Proportion of Indigenous people (of all ages) in overcrowded households, 2004-05 to 2012-13<sup>a,b</sup>**

<sup>a</sup> Households requiring at least one additional bedroom, based on the Canadian National Occupancy Standard for Housing Appropriateness. <sup>b</sup> Error bars represent 95 per cent confidence intervals around each estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); table 10A.1.1.

Nationally in 2012-13, the proportion of Aboriginal and Torres Strait Islander Australians of all ages living in overcrowded households was 22.6 per cent. This proportion is lower than in 2008 (27.5 per cent) and 2004-05 (27.0 per cent). The only jurisdiction to show a statistically significant decrease was the NT (from 66.2 per cent in 2004-05 with 53.8 per cent in 2012-13), although it still had a higher overcrowding rate than other jurisdictions in 2012-13 (figure 10.1.1).

Although not directly comparable with survey results, Census data indicate that overcrowding rates among non-Indigenous Australians are relatively low compared with those for Aboriginal and Torres Strait Islander Australians (in 2011, 6.1 per cent compared with 23.4 per cent) (table 10A.1.8). Census data on overcrowding in Aboriginal and Torres Strait Islander households are also reported for all jurisdictions by remoteness (10A.1.8) and by tenure type (10A.1.9).

The average number of people per Aboriginal and Torres Strait Islander household decreased from 3.4 in 2004-05 and 2008 to 3.1 in 2012-13. The average number of

bedrooms per Aboriginal and Torres Strait Islander household was similar between 2004-05 and 2012-13 (table 10A.1.4). These data are also reported by State and Territory in the same attachment table.

**Figure 10.1.2 Proportion of Indigenous people (all ages) living in overcrowded households, by remoteness<sup>a,b</sup>**

<sup>a</sup> Households requiring at least one additional bedroom, based on the Canadian National Occupancy Standard for Housing Appropriateness. <sup>b</sup> Error bars represent 95 per cent confidence intervals around each estimate.

*Sources:* ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); table 10A.1.3.

Overcrowding increases with remoteness. In 2012-13, the proportion of Aboriginal and Torres Strait Islander people of all ages living in overcrowded households ranged from 17.1 per cent in major cities to 53.3 per cent in very remote areas, with a similar trend observed in 2008 and 2004-05. Over time, the only statistically significant decrease in overcrowding was in very remote areas (from 63.4 per cent in 2004-05 to 53.3 per cent in 2012-13) (figure 10.1.2).

### Overcrowding by housing tenure

Rates of overcrowding vary according to housing tenure. In 2012-13, Aboriginal and Torres Strait Islander people of all ages living in rental households had higher overcrowding rates (27.1 per cent) than those living in households that were owned with or

without a mortgage (12.2 per cent). Around 84 per cent of those in overcrowded households were living in rental households (table 10A.1.5).

Additional data on housing by tenure type is available in section 9.3.

## Overcrowding as a stressor

Figure 10.1.3 **Proportion of Indigenous people (18 years and over) reporting overcrowding as a stressor, by remoteness, 2002 to 2012-13<sup>a</sup>**

<sup>a</sup> Error bars represent 95 per cent confidence intervals around each estimate.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2002; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (2012-13 NATSIHS component); table 10A.1.6.

Nationally, the proportion of Aboriginal and Torres Strait Islander people aged 18 years and over reporting overcrowding as a stressor halved from 20.8 per cent in 2002 to 10.0 per cent in 2012-13. The largest decrease over this period was in very remote areas (from 50.2 per cent to 14.9 per cent) (figure 10.1.3).

Data on Aboriginal and Torres Strait Islander Australians reporting overcrowding as a stressor are also reported by remoteness (table 10A.1.6).

## Things that work

Overcrowding in Aboriginal and Torres Strait Islander households can be due to lack of access to adequate, appropriate and well-maintained housing stock (AIHW 2009). Larger

---

households need not be overcrowded, provided sufficient space is available, which includes extra bedrooms, bathrooms, kitchen spaces and storage space for personal possessions. This requires innovation in the provision of housing, rather than changes to household structure (AHMAC 2012; Healthhabitat 2013).

Aside from additional or improved housing stock, better service responses can help manage overcrowding, by providing transport or financial assistance to individuals and families to return to home communities, supporting host households to manage visitors, providing accessible short-term accommodation, and developing partnerships with health services, particularly to meet the needs of renal dialysis patients (Habibis et al. 2011).

## Future directions in data

The current model of overcrowding used by the ABS, based on the CNOS, is structured around the number of people per bedroom (box 10.1.3). Pholeros and Phibbs (2012) note that crowding could also be examined using a ‘stress model’ where reducing or removing sources of stress may be more helpful. It is desirable to investigate the most suitable concepts for measuring overcrowding in Aboriginal and Torres Strait Islander households, to present a nuanced picture of Indigenous housing.

## 10.2 Rates of disease associated with poor environmental health<sup>3</sup>

### Box 10.2.1 Key messages

- From 2003–2007 to 2008–2012, after adjusting for differences in population age structures, the death rate for Aboriginal and Torres Strait Islander Australians from diseases associated with poor environmental health decreased by 20 per cent but was still 1.7 times the non-Indigenous rate (for NSW, Queensland, WA, SA and the NT combined) (tables 10A.2.12–13).
- Nationally in 2012–13, hospitalisation rates for Aboriginal and Torres Strait Islander Australians for diseases associated with poor environmental health:
  - were highest for intestinal infectious diseases (372.1 per 100 000 population), influenza and pneumonia (358.3 per 100 000 population) and bacterial disease (203.8 per 100 000 population) (table 10A.2.1)
  - (after adjusting for population age structures) were higher than for non-Indigenous Australians for all selected diseases (table 10A.2.11)
  - were higher in remote and very remote areas than in non-remote areas for all disease types except lung disease. There was no clear relationship between disease rates and remoteness for non-Indigenous Australians (table 10A.2.11).
- From 2004–05 (2008–09 for intestinal infectious diseases) to 2012–13 for NSW, Victoria, Queensland, WA, SA and the NT combined, hospitalisation rates for Aboriginal and Torres Strait Islander Australians for most selected diseases increased, particularly for intestinal infectious diseases and bacterial diseases (table 10A.2.1).

### Box 10.2.2 Measures of rates of disease associated with poor environmental health

There are two main measures for this indicator.

- *Hospitalisation rates for selected types of environmentally based diseases* is defined as the number of people with a disease associated with poor environmental health divided by the population, and is presented as a rate per 100 000 people. Data for this measure are sourced from the AIHW National Hospital Morbidity Database, with the most recent data available for 2012–13 (all jurisdictions; age; remoteness).

(continued next page)

---

<sup>3</sup> The Steering Committee notes its appreciation to the Working Group on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the report.

---

**Box 10.2.2 (continued)**

- *Death rates for diseases associated with poor environmental health* is defined as the number of deaths associated with poor environmental health divided by the population, and is presented as a rate per 100 000 people. Data for this measure are sourced from the ABS Causes of Death collection, with the most recent available data for 2012 (NSW, Queensland, WA, SA and the NT; sex).

During the late 1800s and early 1900s, most public health efforts focused on the control of infectious diseases, particularly epidemics. In the following century, improvements in sanitation, drinking water quality, food safety, disease control and housing conditions resulted in large improvements in public health and longevity for most Australians (AIHW 2014; EnHealth Council 2000). However, many rural and remote Aboriginal and Torres Strait Islander communities still struggle to achieve the basic level of environmental health that has been achieved for the rest of the population (EnHealth Council 2000; Knibbs and Sly 2014; McDonald, Bailie and Michel 2013).

The hospitalisation data used in this section reflect more serious cases of diseases, but do not necessarily show the overall incidence of disease, as people may not go to a hospital for treatment. In addition, a patient in a remote area may be admitted to hospital whereas the same patient in an urban area might be managed as an outpatient. Hospital data can also include some duplication, as patients can have multiple admissions for some chronic conditions, as well as changes in conditions (such as transfer from a medical ward to a rehabilitation centre within a hospital) (AIHW 2014b).

Hospitalisations data are reported from 2004-05 to 2009-10 for six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT). These six jurisdictions were considered to have acceptable quality of Indigenous identification in hospitalisation data. From 2010-11 onwards, Indigenous status in hospital separations data is considered of sufficient quality for reporting in all jurisdictions.

## **Hospitalisation rates for selected diseases**

Nationally in 2012-13, crude hospitalisation rates for Aboriginal and Torres Strait Islander Australians for diseases associated with poor environmental health were highest for intestinal infectious diseases (372.1 per 100 000 population), influenza and pneumonia (358.3 per 100 000 population) and bacterial disease (203.8 per 100 000 population) (table 10A.2.1). Overall, for these three environmental diseases the hospitalisation rate was higher for those aged 65 years and over compared to the younger age groups (table 10A.2.10).

In 2012-13, after adjusting for differences in population age structures, hospitalisation rates for all diseases associated with poor environmental health were higher for Aboriginal and Torres Strait Islander Australians than for non-Indigenous Australians. For Aboriginal and

---

Torres Strait Islander Australians the rates were higher in remote and very remote areas compared to non-remote areas for all disease types except lung disease due to the environment. There was no clear pattern between disease rates and remoteness for non-Indigenous Australians (table 10A.2.11).

Between 2004-05 and 2012-13, for NSW, Victoria, Queensland, WA, SA and the NT combined, hospitalisation rates for Aboriginal and Torres Strait Islander Australians:

- increased for influenza and pneumonia (from 363.0 to 369.8 per 100 000 population) and bacterial disease (from 164.0 to 210.1 per 100 000 population)
- decreased slightly for asthma (from 159.4 to 153.4 per 100 000 population) (table 10A.2.1).

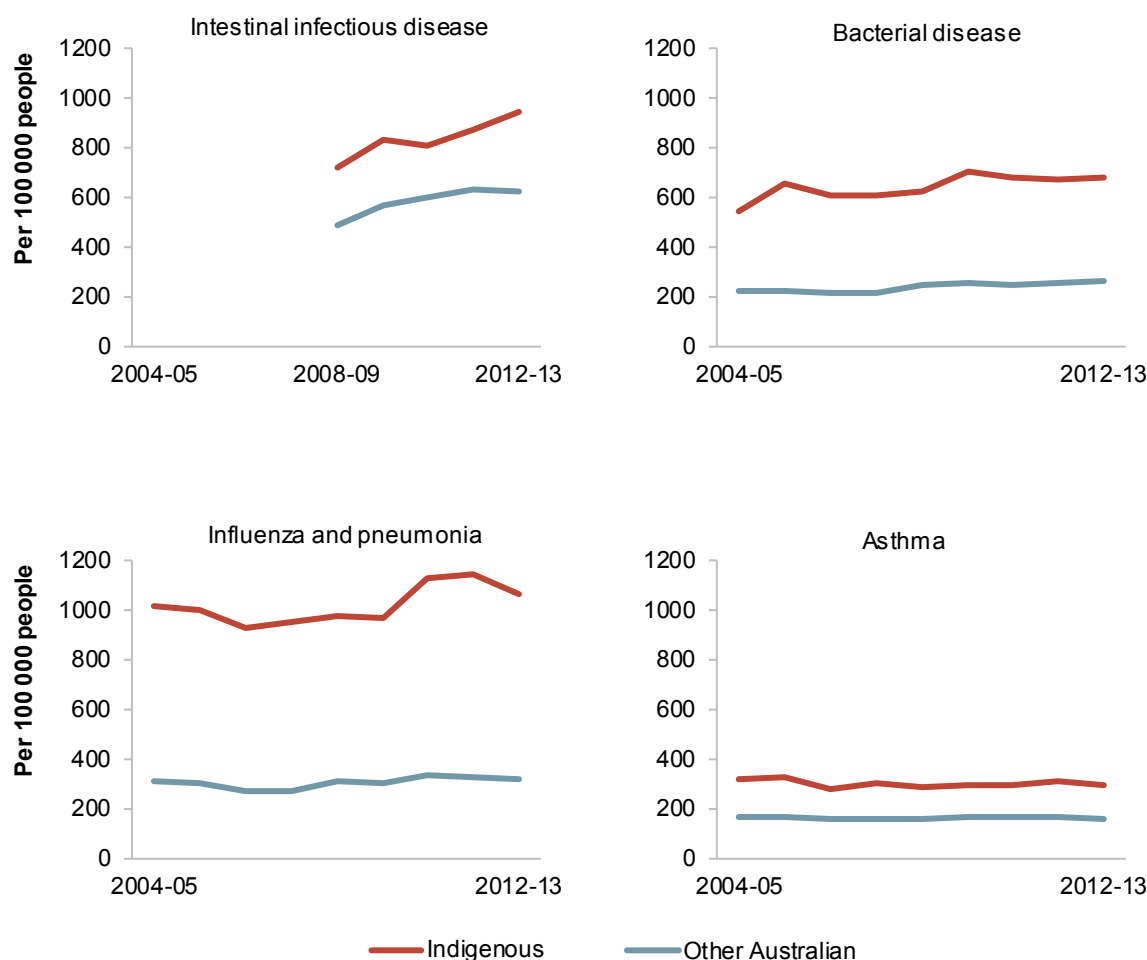

Between 2008-09 and 2012-13<sup>4</sup>, for NSW, Victoria, Queensland, WA, SA and the NT combined, rates for Aboriginal and Torres Strait Islander Australians for intestinal infectious diseases increased (from 331.7 to 380.1 per 100 000 population in 2012-13) (table 10A.2.1).

For comparison between populations, age standardised rates illustrating the differences in hospitalisation between Aboriginal and Torres Strait Australians and non-Indigenous Australians are presented in figure 10.2.1; tables 10A.2.2–10). The rates for Aboriginal and Torres Strait Islander Australians for these four disease types are higher than the rates for non-Indigenous Australians, with similar trends over time.

---

<sup>4</sup> In 2008-09, coding for intestinal infectious diseases changed as a result of changes to gastroenteritis coding in the Australian Modification of the 10<sup>th</sup> revision of the International Classification of Diseases. Therefore, rates of intestinal diseases cannot be compared with rates for previous years, resulting in a break in the time series. See attachment tables for further caveats to these data.

Figure 10.2.1 **Age standardised hospitalisation rates for selected diseases, NSW, Victoria, Queensland, WA, SA, and public hospitals in the NT, 2004-05 to 2012-13<sup>a, b, c</sup>**

**a** Directly age standardised using the 2001 Australian population. **b** 'Other Australian' includes 'non-Indigenous' and cases where Indigenous status was 'not stated'. **c** See tables 10A.2.2–10 for further caveats on these data.

Source: AIHW (unpublished) National Hospital Morbidity Database; tables 10A.2.2–10.

Acute rheumatic fever and trachoma are virtually unknown in the non-Indigenous population but remain at relatively high rates among some populations of Aboriginal and Torres Strait Islander Australians, particularly in areas with poor environmental health coupled with poor hygiene practices (AIHW 2013; The Kirby Institute, UNSW 2013).

Although based on small numbers, in 2012-13, after adjusting for differences in population age structures, the hospitalisation rate for Aboriginal and Torres Strait Islander Australians for acute rheumatic fever was 55.9 times the rate for non-Indigenous Australians. (table 10A.2.11). Hospitalisation rates for trachoma are suppressed due to the small

---

numbers, but surveillance data are available for 195 communities at ‘higher risk’ of trachoma and screened for the condition in Queensland (6 communities), WA (77 communities), SA (36 communities) and the NT (76 communities). In 2012, the rates of active trachoma prevalence in children aged 1–14 years were 4 per cent in the NT and WA, 1 per cent in SA and none in Queensland (The Kirby Institute, UNSW 2013).

Remote Aboriginal communities of northern Australia also have the highest reported rates of crusted scabies in the world (Lokuge et al. 2014). In 2012–13, after adjusting for differences in population age structures, the hospitalisation rate for Aboriginal and Torres Strait Islander Australians for scabies was 38.3 times the rate for non-Indigenous Australians (table 10A.2.11).

### **Death rates for diseases associated with poor environmental health**

Data on deaths from diseases associated with poor environmental health are available for five jurisdictions (NSW, Queensland, WA, SA and the NT). The sample size of Aboriginal and Torres Strait Islander identification and quality of data from these jurisdictions was considered acceptable for statistical analysis. Data are available in five-year groupings (2003–2007 and 2008–2012), due to the volatility of small numbers each year.

After adjusting for population age structures, the death rate for Aboriginal and Torres Strait Islander Australians from diseases associated with poor environmental health reduced from 1.8 times the non-Indigenous rate in 2003–2007 to 1.7 times the non-Indigenous rate in 2008–2012 (for NSW, Queensland, WA, SA and the NT combined) (tables 10A.2.12–13).

Data on deaths from diseases associated with poor environmental health are also reported by sex (tables 10A.2.12–13).

### **Things that work**

Box 10.2.3 provides an example of a program that helps improve environmental health for Aboriginal and Torres Strait Islander Australians, through management of crusted scabies. Scabies is caused by a mite living in the skin, and can lead to kidney and heart problems. Crusted scabies is a type of scabies caused by the same mite which is highly contagious and occurs when a person’s immune system cannot control the number of mites. There is often a reduced life expectancy and a high risk of reoccurrence, and this disease is managed as a chronic disease (Central Australian Rural Practitioners Association 2014).

---

### Box 10.2.3 'Things that work' — Improving environmental health for Aboriginal and Torres Strait Islander Australians

**The East Arnhem Scabies Control Program (EASCP)** was established in early 2011 as a joint initiative of One Disease, Miwatj Health Aboriginal Corporation and the NT Government Department of Health. The program has three main goals:

1. to eliminate crusted scabies as a public health issue in all participating East Arnhem communities by the end of the third year of the program
2. to document a 50 per cent reduction in scabies and skin sores rates from baseline by the end of the third year of the program in at least three participating communities while aiming for all communities
3. to support related environmental health and regulatory initiatives.

The program was evaluated between August 2011 and June 2013.<sup>1</sup> Seven patients in the three communities under evaluation and seven paired contacts (a household child contact with the same primary residence) were included in the evaluation.

The evaluation examined the number of presentations involving recurrences of crusted scabies in patients and paired contact presentations for simple scabies. The evaluation found that, compared to the baseline (prior to intervention), there was a significant decrease in total recurrences (44 per cent) and paired contact presentations (58 per cent).

These results are positive, although the generalisability of the results may be limited by the small sample size. Despite this limitation, the Central Australian Rural Practitioners Association Standard treatment manual (2014) has been updated to feature the EASCP's model of care.

<sup>1</sup> Although this evaluation was not independent, it was published in the Medical Journal Of Australia (MJA), a leading peer-reviewed general medical journal.

## 10.3 Access to clean water and functional sewerage and electricity services<sup>5</sup>

### Box 10.3.1 Key messages

- Nationally, the majority of Aboriginal and Torres Strait Islander households in 2012-13 had working household facilities (96.7 per cent for washing people, 94.1 per cent for washing clothes and bedding, 90.1 per cent for preparing food and 97.0 per cent with working sewerage facilities) (table 10A.3.8).
- However, many lived in dwellings with major structural problems (from 33.5 per cent in non-remote areas to 46.1 per cent in remote/very remote areas) (table 10A.3.11).
- The proportion of Aboriginal and Torres Strait Islander households living in housing of an acceptable standard (reflecting the structural issues and working facilities) decreased from 83.2 per cent in 2008 to 77.8 per cent in 2012-13 (table 10A.3.16).
- New outcome data on access to clean water, functional sewerage and electricity services for discrete Indigenous communities were not available for this report. The most recent available data are for 2006, with no further collection currently planned.

### Box 10.3.2 Measures of access to clean water, functional sewerage and electricity services

There are two main measures for this indicator.

- *Access to common/community water, sewerage and electricity services* is defined as the proportion of discrete Indigenous communities with access to common/community water, sewerage and electricity services. The data source for this measure is the ABS Community Housing and Infrastructure Needs Survey (CHINS), with the most recent available data for 2006 (some jurisdictions; and remoteness).
- *Indigenous households living in housing of an acceptable standard* is defined as a household with four working facilities and not more than two major structural problems. The data source for this measure is the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS)/National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with the most recent data for 2012-13 (all jurisdictions and capital city and balance of state). Supplementary data for the components of working facilities and major structural problems are also reported (all jurisdictions and remoteness). The data from the AATSIHS are 'self-reported' and are based on the respondent's view of their house and its functionality.

A clean, adequate and reliable supply of water is required for drinking, cooking and washing (Australian Indigenous HealthInfoNet 2013). A functional sewerage system prevents sewage from contaminating drinking water and food (Australian Indigenous HealthInfoNet 2008). Access to a reliable electricity (or gas) supply is essential for

---

<sup>5</sup> The Steering Committee notes its appreciation to the Working Group on Aboriginal and Torres Strait Islander Environmental Health, which reviewed a draft of this section of the report.

---

cooking, refrigeration, and running household appliances, such as washing machines (AHMAC 2012). Adequate disposal of human waste, rubbish removal and power supply are associated with better health outcomes (Osbourne, Baum and Brown 2013).

Access to functional ‘health hardware’, which support the healthy living practices, is associated with a positive impact on health, as found in Ware’s review of housing and health literature (2013). Health hardware are key appliances and structures, and include: ‘toilets, lights, and drains to taps, showers and kitchens’ (Pholeros et al. 2013).

Recent literature reviews have found that it is more expensive and logistically more difficult to construct and maintain housing and associated infrastructure in remote areas (Fien and Charlesworth 2012; Ware 2013). Even bearing this in mind, concerns have been raised that infrastructure in remote Indigenous communities does not meet the standard generally available in equivalent non-Indigenous communities. There is a need for data allowing comparison between services in discrete Indigenous communities and those in equivalent non-Indigenous communities.

However, a 2009-10<sup>6</sup> audit of municipal and essential services, involving site visits to 86 remote Indigenous communities and 14 non-Indigenous communities of comparable size and location, found that there were differences between remote Indigenous and remote non-Indigenous communities, stating ‘... the level of infrastructure in remote Indigenous communities does not meet the standard generally available in non-Indigenous communities of a similar size and location, and ... services are consistently unreliable and suffer major disruptions ... ’(Australian Government 2013).

In 2009, COAG agreed to the National Affordable Housing Agreement (NAHA), which included the outcome that Aboriginal and Torres Strait Islander Australians should have ‘the same housing opportunities as other Australians, and improved housing amenity ... particularly in remote areas and discrete communities’(COAG 2012).

The NAHA is supported by the National Partnership Agreement on Remote Indigenous Housing (NPARIH), which aims to improve housing in remote communities, including funding for minor repairs and maintenance (COAG 2009). In 2012, the COAG Reform Council (CRC), in its report on progress under the COAG reform agenda, stated that the NPARIH was on track to achieve its objectives, with all milestones fully or largely met to date. For 2011-12, these included the completion of 595 new houses and 1591 refurbishments in remote Indigenous communities across Australia (CRC 2012).

---

<sup>6</sup> The national Municipal and Essential Services Audit (the audit) was agreed to by the Commonwealth, States and the NT Governments under the NPARIH in November 2008. The audit was undertaken by a number of audit delivery teams across each jurisdiction, consisting of professional engineers. The Australian Government advised that the audit was conducted in accordance with an audit implementation plan, agreed to by the Commonwealth and the State and NT governments during November-December 2009.

---

## Water, sewerage and electricity services in discrete Indigenous communities

Many Aboriginal and Torres Strait Islander Australians live in urban areas where reliable drinking water, sewerage and electricity systems are available to everyone. In rural and remote areas, there is a greater reliance on local or individual household systems, like generators, septic tanks and drinking water sourced from bores and rainwater tanks (Australian Indigenous HealthInfoNet 2013).

This section contains a summary of the most recent available data on access to clean water and functional sewerage and electricity services in discrete Indigenous communities, from the CHINS 2001 and 2006 (ABS 2007). More detailed information can be found in previous editions of this Report. However, these CHINS data predate the introduction of the NAHA and NPARIH, and therefore may not necessarily be representative of current conditions.

CHINS data are limited to discrete Indigenous communities and are not comparable with performance indicators commonly used by mainstream water, sewerage and electricity utilities to measure performance. 'Discrete Indigenous communities' are defined as geographic locations inhabited predominantly (greater than 50 per cent of residents) by Aboriginal or Torres Strait Islander Australians, with housing or infrastructure that is managed on a community basis. The majority of people in discrete Indigenous communities lived in very remote areas in both 2001 (85 per cent) and 2006 (74.5 per cent) (ABS 2007).

Discrete Indigenous communities range in size from fewer than 50 inhabitants to over 1000 inhabitants. Although there were a larger number of small communities (865 with fewer than 50 inhabitants in 2006) around two thirds (66.0 per cent) lived in communities with 200 or more inhabitants (table 10.3.1).

---

**Table 10.3.1 Reported usual population of discrete Indigenous communities, 2006<sup>a,b</sup>**

	<i>Less than 50</i>	<i>50 to 99</i>	<i>100 to 199</i>	<i>200 to 499</i>	<i>500 to 999</i>	<i>1000 or more</i>	<i>All communities</i>

---

## Water

- *Source* — Between 2001 and 2006, the number of discrete Indigenous communities that were connected to a town water supply increased from 186 to 209 (from 15.3 per cent to 17.6 per cent of all communities), and the number of communities with no organised water supply decreased from 21 to 9 (from 1.7 per cent to 0.8 per cent of all communities) (table 10A.3.1).
- *Reliability* — In 2006, 182 discrete Indigenous communities reported drinking water interruptions in the previous 12 months (information on water restrictions was only known for 366 out of all 1187 communities). Of those 182 communities with interruptions, 69 (37.9 per cent) reported five or more interruptions (table 10A.3.2). Comparable data are not available for 2001.
- *Quality* — In 2006, 978 discrete Indigenous communities were not connected to a nearby mainstream town water supply. Of these communities, 164 (16.7 per cent) had drinking water sent away for testing. Of those tested, 48 (29.3 per cent) failed (table 10A.3.3). Comparable data are not available for 2001.

## Sewerage

- *Source* — In 2006, 25 discrete Indigenous communities (2.1 per cent of all communities) reported having no organised sewerage system, a decrease from 91 communities (7.5 per cent) in 2001 (table 10A.3.4). Although septic tanks with leach drains and pit toilets were the main sewerage systems in communities in both 2001 and 2006, the number of communities connected to a nearby mainstream town sewerage system increased from 89 (7.3 per cent of all communities) to 121 (10.2 per cent) over the period (table 10A.3.4).
- *Reliability* — In 2006, 142 discrete Indigenous communities reported sewerage overflows or leakages in the previous 12 months (information on sewerage overflows or leakages was only known for 361 out of all 1187 communities) (table 10A.3.5). Comparable data are not available for 2001. These data are reported by selected jurisdictions in table 10A.3.6.

## Electricity services

- *Source* — In 2006, 32 discrete Indigenous communities (2.7 per cent of all communities) reported that they had no organised electricity supply (table 10A.3.7), a decrease from 80 communities (7 per cent) in 2001 (ABS 2007).

## Indigenous households living in housing of an acceptable standard

Reporting on Aboriginal and Torres Strait Islander households living in housing of an acceptable standard is aligned with the related indicator in the National Affordable Housing Agreement (SCRGSP 2012).

---

The ‘acceptable standard’ measure is made up of two components:

- working household facilities
- major structural problems.

Each component is discussed separately below.

Overall, nationally in 2012-13, 77.8 per cent of Aboriginal and Torres Strait Islander households were living in houses of an acceptable standard, with no significant difference between the rates for capital cities (80.4 per cent) and other areas (‘balance of state’) (76.2 per cent) (table 10A.3.16). From 2008 to 2012-13, the national proportion decreased by 4.4 percentage points (from 83.2 to 77.8 per cent), a statistically significant deterioration. This decrease was in both capital cities (from 85.4 to 80.4 per cent) and other areas (82.0 to 76.2 per cent) (table 10A.3.16). The national result was driven by decreases in Queensland, WA and the NT (table 10A.3.16).

### Access to household facilities

Nationally in 2012-13, more than 90 per cent of Aboriginal and Torres Strait Islander households had working household facilities:

- 96.7 per cent for washing people
- 94.1 per cent for washing clothes and bedding
- 90.1 per cent for preparing food
- 97.0 per cent with working sewerage facilities

Results were similar across states and territories (table 10A.3.8).

From 2002 to 2012-13, in Queensland, NSW and WA there were statistically significant decreases in the proportions of Aboriginal and Torres Strait Islander households with working household facilities (table 10A.3.8).

In 2012-13, a lower proportion of Aboriginal and Torres Strait Islander households, in remote plus very remote areas, had access to working household facilities, compared to non-remote areas (table 10A.3.9). In remote plus very remote areas, only three out of four Aboriginal and Torres Strait Islander households (76.4 per cent) had working facilities to prepare food, compared with 92.5 per cent in non-remote areas (table 10A.3.9).

### Housing with major structural problems

Nationally in 2012-13, over one-third (35.4 per cent) of Aboriginal and Torres Strait Islander households lived in dwellings with major structural problems (table 10A.3.10), with this proportion higher in remote plus very remote areas (46.1 per cent) than in non-remote areas (33.5 per cent) (table 10A.3.11). The most commonly reported structural

---

issue in remote plus very remote areas was major plumbing problems (18.0 per cent), while in non-remote areas it was major cracks in walls/floors (14.2 per cent) (table 10A3.11).

From 2008 to 2012-13, the proportion of Aboriginal and Torres Strait Islander households reporting major structural problems (excluding rising damp) rose from 26.1 per cent to 33.8 per cent (table 10A.3.12).

Data on Aboriginal and Torres Strait Islander Australians reporting that their dwellings had major structural problems are also available by State and Territory in tables 10A.3.10, 10A.3.12 (excluding rising damp) and 10A.3.14.

## Future directions in data

New data on access to water, sewerage and electricity services are available infrequently. The CHINS was conducted in 1994, 2001 and 2006. There is currently no date for the next CHINS, despite an agreed NPARIH output being ‘improved data collection through a three-yearly CHINS-like collection’ (COAG 2009). New data for this measure, whether from the CHINS or a comparable survey, are critical to enable ongoing reporting for discrete Indigenous communities.

Data on access to household facilities and condition of Indigenous housing are collected in the ABS AATSIHS/NATSISS. For this report, data on major structural problems are not directly comparable between 2008 and 2012-13 due to different treatment of ‘rising damp’. Consistent collection of data across surveys is desirable to enable comparisons of the complete measure over time.

(a) Households requiring at least one additional bedroom, based on the Canadian National Occupancy Standard for Housing Appropriateness.

(b) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

**RSE** Relative standard error. **CI** Confidence interval.

(a) 'Housing tenure' refers to the nature of a household's legal right to occupy the dwelling in which the household members usually reside. Tenure is determined according to whether any person living in the household owns the dwelling outright, owns the dwelling but has a mortgage or loan secured against it, is paying rent to live in the dwelling, or has some other arrangement to occupy the dwelling.

(b) Estimates with a RSE of 25 per cent to 50 per cent should be interpreted with caution.

(c) Households requiring at least one additional bedroom, based on the Canadian National Occupancy Standard for Housing Appropriateness.

(d) Comprises participants in rent/buy schemes and those living in a household in which payments were being made on mortgages or secured loans towards the purchase of the dwelling.

(e) Includes those occupying households rent-free, boarders, other tenure and those under a life tenure scheme.

(f) Includes tenure type not stated.

Average number of persons per bedroom (e)	no.	1.3	0.8	0.8

(e) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) A household with Indigenous members is any household that at least one person of any age as a resident at the time of the Census who identified as being of Aboriginal and/ or Torres Strait Islander origin.

(c) Includes households which did not have at least one person of any age as a resident at the time of the Census who identified as being of Aboriginal and/ or Torres Strait Islander origin.

(d) Average household size is the number of people usually resident in occupied private dwellings. Includes partners, and co-tenants (in group households) who were temporarily absent on Census night. A maximum of three temporary absentees can be counted in each household. Excludes 'visitor only' and 'Other not classifiable' households.

(e) Average number of persons per bedroom is applicable to occupied private dwellings. Excludes 'Visitor only' and 'Other not classifiable' households.

Source: ABS (unpublished) derived from the 2001, 2006 and 2011 Census of Population and Housing.

(a) Australia total includes Other Territories.

(b) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness.

The measure assesses the bedroom requirements of a household by specifying that:

- there should be no more than two persons per bedroom
- children less than 5 years of age of different sexes may reasonably share a bedroom
- children 5 years of age or older of opposite sex should have separate bedrooms
- children less than 18 years of age and of the same sex may reasonably share a bedroom
- single households members 18 years or over should have a separate bedroom, as should parents or couples.

Households living in dwellings where this standard cannot be met are considered to be overcrowded.

(c) Includes 'Aboriginal', 'Torres Strait Islander', 'Both Aboriginal and Torres Strait Islander'.

(d) Total for Australia also includes Migratory/Offshore and No Usual Address. For 2001 also includes inadequately described/not stated.

(e) Persons living in overcrowded households as a proportion of all Family, Lone Person and Group Households.

(f) Cells in this table have been randomly adjusted to avoid the release of confidential data.

– Nil or rounded to zero.

Source: ABS (unpublished) derived from the 2001, 2006 and 2011 Census of Population and Housing.

– Nil or rounded to zero

(a) Australia total includes Other Territories.

(b) Includes 'Aboriginal', 'Torres Strait Islander', 'Both Aboriginal and Torres Strait Islander'.

(c) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness.

The measure assesses the bedroom requirements of a household by specifying that:

- there should be no more than two persons per bedroom
- children less than 5 years of age of different sexes may reasonably share a bedroom
- children 5 years of age or older of opposite sex should have separate bedrooms
- children less than 18 years of age and of the same sex may reasonably share a bedroom
- single households members 18 years or over should have a separate bedroom, as should parents or couples.

Households living in dwellings where this standard cannot be met are considered to be overcrowded.

(d) Also includes households being purchased under a rent/buy scheme.

(e) Includes rented households where the Landlord type was not stated.

(f) Includes households where the Tenure Type was not stated.

(g) Persons living in overcrowded households as a proportion of all Family, Lone Person and Group Households.

(h) Cells in this table have been randomly adjusted to avoid the release of confidential data.

Source: ABS (unpublished) derived from the 2001, 2006 and 2011 Census of Population and Housing.

(a) Any diagnosis was used to select the infectious diseases (ICD-10-AM codes A00–B99), principal diagnosis was used to select the other conditions. There may therefore be overlap between the 'Intestinal infectious diseases' and other categories. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases) 10th Revision, Australian Modification.

(b) Data are reported by State or Territory of usual residence of the patient hospitalised.

(c) From 2004-05 to 2009-10, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Indigenous identification in hospitalisation data. From 2010-11 onwards, data for all jurisdictions are considered to be of acceptable quality.

TABLE 10A.2.1

**Table 10A.2.1 Hospitalisation rates for selected types of environmentally based diseases for Indigenous persons (per 100 000 population), 2004-05 to 2012-13 (a), (b), (c)**

All jurisdictions (d)			NSW, Victoria, Queensland, WA, SA, and NT (e)									
2012-13	2011-12	2010-11	2012-13	2011-12	2010-11	2009-10	2008-09	2007-08	2006-07	2005-06	2004-05	

(d) Data are reported for public and private hospitals in all jurisdictions.

(e) Data are reported for residents of these jurisdictions and exclude separations from private hospitals in the NT.

(f) In 2008-09 coding for intestinal infectious diseases changed as a result of changes to gastroenteritis coding in the ICD-10-AM. Persons aged 15 years and over, who were previously coded as K52.2 'Allergic and dietetic gastroenteritis and colitis', K52.8 'Other specified non-infective gastroenteritis and colitis', or K52.9 'Non-infective gastroenteritis and colitis, unspecified' could be coded in a newly created category A09.9 'Gastroenteritis and colitis of unspecified origin'. The extent to which the increase for adults represents a real increase in intestinal infectious diseases cannot be determined. Rates for intestinal infectious diseases from 2008-09 onward cannot be compared with rates for previous years.

(a) Data are reported for residents of NSW, Victoria, Queensland, WA, SA and the NT, and exclude separations from private hospitals in the NT.

(b) Any diagnosis was used to select the infectious diseases (ICD-10-AM codes A00-B99), principal diagnosis was used to select the other conditions. There may therefore be overlap between the 'Intestinal infectious diseases' and other categories. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases) 10th Revision, Australian Modification.

(c) Rates per 100 000 population are calculated using rebased population backcast estimates and projections from the 2011 Census.

(d) From 2004-05 to 2009-10, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Indigenous identification in hospitalisation data. From 2010-11 onwards, data for all jurisdictions are considered to be of acceptable quality.

(e) Directly age standardised using the 2001 Australian population. Rates are per 100 000 population.

(f) Other comprises 'non-Indigenous' and where Indigenous status is 'Not stated'.

— Nil or rounded to zero.

TABLE 10A.2.6

**Table 10A.2.6 Hospitalisation rates for selected types of environmentally based diseases for persons (per 100 000 population), NSW, Victoria, Queensland, WA, SA, and public hospitals in the NT, 2008-09 (a), (b), (c), (d)**

	0-14 years	15-24 years	25-44 years	45-64 years	65 years and over	NSW, Victoria, QLD, WA, SA and the NT (e)
(f) For 2008-09 coding for intestinal infectious diseases changed as a result of changes to gastroenteritis coding in the ICD-10-AM. Persons aged 15 years and over, who were previously coded as K52.2 'Allergic and dietetic gastroenteritis and colitis', K52.8 'Other specified non-infective gastroenteritis and colitis', or K52.9 'Non-infective gastroenteritis and colitis, unspecified' could be coded in a newly created category A09.9 'Gastroenteritis and colitis of unspecified origin'. The extent to which the increase for adults represents a real increase in intestinal infectious diseases cannot be determined. Adult rates for intestinal infectious diseases cannot be compared with rates for previous years.						
(g) For persons aged less than 15 years changes to coding standards in the ICD-10-AM removed the requirement to assume infectious origin for gastroenteritis in persons under 15. Due to this change, it is assumed that there would be a movement of children from A09 into A09.9 and/or K52.9. However, the decrease is also partly due to an actual decline in separations for intestinal infections diseases (mostly for those coded to A03 'Shigellosis' and A08 'Viral and other intestinal infections'). The decline is evident for both Indigenous and other children, however the decline is greater for Indigenous children which lends some weight to the conclusion that to some extent, there has been an actual decline between 2007-08 and 2008-09.						
(h) Other comprises 'non-Indigenous' and where Indigenous status is 'Not stated'.

Toxic effects of metals (T56)	0.1	0.4	0.5	0.3	0.4	0.7	0.7

(a) Any diagnosis was used to select the infectious diseases (ICD-10-AM codes A00-B99), principal diagnosis was used to select the other conditions. There may therefore be overlap between the 'Intestinal infectious diseases' and other categories. Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases) 10th Revision, Australian Modification.

(b) Rates per 100 000 population are calculated using rebased population backcast estimates and projections from the 2011 Census.

(c) From 2004-05 to 2009-10, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Indigenous identification in hospitalisation data. From 2010-11 onwards, data for all jurisdictions are considered to be of acceptable quality.

(d) Data are reported for residents of NSW, Victoria, Queensland, WA, SA and the NT, and exclude separations from private hospitals in the NT.

(e) Directly age standardised using the 2001 Australian population. Rates are per 100 000 population.

(f) Data are reported for public and private hospitals in all jurisdictions.

TABLE 10A.2.8

Table 10A.2.8 **Hospitalisation rates for selected types of environmentally based diseases for persons (per 100 000 population), by jurisdiction, 2010-11 (a), (b), (c)**

	0-14 years	15-24 years	25-44 years	45-64 years	65 years and over	NSW, Victoria, QLD, WA, SA and the NT (d)(e)	Australia (all jurisdictions) (e)(f)
(g) For 2008-09 coding for intestinal infectious diseases changed as a result of changes to gastroenteritis coding in the ICD-10-AM. Persons aged 15 years and over, who were previously coded as K52.2 'Allergic and dietetic gastroenteritis and colitis', K52.8 'Other specified non-infective gastroenteritis and colitis', or K52.9 'Non-infective gastroenteritis and colitis, unspecified' could be coded in a newly created category A09.9 'Gastroenteritis and colitis of unspecified origin'. The extent to which the increase for adults represents a real increase in intestinal infectious diseases cannot be determined. Adult rates for intestinal infectious diseases cannot be compared with rates for previous years.							
(h) For persons aged less than 15 years changes to coding standards in the ICD-10-AM removed the requirement to assume infectious origin for gastroenteritis in persons under 15. Due to this change, it is assumed that there would be a movement of children from A09 into A09.9 and/or K52.9. However, the decrease is also partly due to an actual decline in separations for intestinal infections diseases (mostly for those coded to A03 'Shigellosis' and A08 'Viral and other intestinal infections'). The decline is evident for both Indigenous and other children, however the decline is greater for Indigenous children which lends some weight to the conclusion that to some extent, there has been an actual decline between 2007-08 and 2008-09.							
(i) Other comprises 'non-Indigenous' and where Indigenous status is 'Not stated'.							
– Nil or rounded to zero.

(a) Data are from public and private hospitals in all jurisdictions.

(b) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). Any diagnosis was used to select the infectious diseases (ICD-10-AM codes A00–B99), principal diagnosis was used to select the other conditions. There may therefore be overlap between the 'Intestinal infectious diseases' and other categories.

(c) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.

(d) 'Non-Indigenous' includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

(e) Rates are per 100 000 population. For Major cities; Inner and Outer regional; and Remote and Very remote rates are calculated using the ABS 2012 Estimated Resident Population by remoteness based on the 2011 Census, and are directly age standardised using the 2001 Australian population.

(f) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous hospitalisation rate.

– Nil or rounded to zero. **np** Not published.

Source: AIHW (unpublished) National Hospital Morbidity Database.

Table 10A.2.12 **Deaths from diseases associated with poor environmental health, age standardised death rates, by State and Territory, 2003–2007 (a), (b), (c), (d), (e), (f)**

	<i>Indigenous (g) (h)</i>			<i>Non-Indigenous (i)</i>		
	<i>Males</i>	<i>Females</i>	<i>Total</i>	<i>Males</i>	<i>Females</i>	<i>Total</i>
NSW	43.6	30.1	35.6	33.3	26.4	29.4
Qld	51.1	36.4	43.0	30.7	24.7	27.4
WA (j)	88.2	87.1	88.0	25.5	20.3	22.6
SA	np	47.4	43.8	37.4	31.1	33.8
NT	100.6	85.3	92.5	30.4	20.4	26.2
<b>Total (k)</b>	<b>58.0</b>	<b>47.6</b>	<b>52.2</b>	<b>32.2</b>	<b>25.8</b>	<b>28.6</b>

(a) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2006-2007 (final). See Explanatory Notes 29-33 and Technical Notes, Causes of Death Revisions, 2006 in Causes of Death, Australia, 2010 (cat. 3303.0) and Causes of Death Revisions, 2010 and 2011 in Causes of Death, Australia, 2012 (cat. 3303.0).

(b) ICD-10 codes for deaths from conditions associated with poor environmental health include: intestinal infectious diseases (A00–A09); tuberculosis (A15–A19); bacterial disease (A20–A49); trachoma (A71); acute hepatitis A (B15); acute hepatitis B (B16); scabies (B86); acute rheumatic fever (I00–I02); chronic rheumatic heart diseases (I05–I09); acute upper respiratory infections (J00–J06); influenza and pneumonia (J10–J18); asthma (J45) and lung disease due to external agents (J60–J70).

(c) Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These five states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.

(d) Data are presented in five-year groupings due to the volatility of small numbers each year.

(e) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.

(f) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

(g) Data on deaths of Aboriginal and Torres Strait Islander Australians are affected by differing levels of coverage of deaths identified as Indigenous across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.

(h) Although most deaths of Indigenous people are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these data are likely to underestimate the Indigenous all causes mortality rate.

(i) Denominators used in the calculation of rates for the Indigenous population are Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS Cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.

(j) Aboriginal and Torres Strait Islander data for Western Australia were not published in Causes of Death, Australia, 2010 (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in Causes of Death, Australia, 2010 (cat. no. 3303.0). This adjusted data has been included in this table.						
(k) Total includes data for NSW, Queensland, WA, SA and the NT only. These five states and territories have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.						
<b>np</b> Not published.

Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.
- (h) Although most deaths of Indigenous people are registered, it is likely that some are not accurately identified as Indigenous. Therefore, these data are likely to underestimate the Indigenous all causes mortality rate.
- (i) Denominators used in the calculation of rates for the Indigenous population are Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS Cat. no. 3238.0, series B, 2011 base). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.
- (j) Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. See data quality statements for a more detailed explanation.

- (a) Data not collected in 'administered' communities. An administered community in the CHINS surveys is a discrete Indigenous community that has a population of less than 50 people and is linked to a larger parent discrete Indigenous community or a Resource Agency for the provision and maintenance of services such as housing, water, power supplies and sewerage.
- (b) In the previous 12 months.
- (c) Components may not add to totals as more than one response may be specified.
- (d) Proportions have been calculated by the Steering Committee for the Review of Government Service Provision. The denominator for all proportions includes administered communities. Proportions are not available for communities with populations less than 50 or the all communities total because data was not collected in 'administered' communities.

**RSE** = Relative Standard Error.

(a) There were differences in the question methodology between NATSISS 2002, 2008 and AATSIHS 2012-13 when asking about functional household facilities. In 2002, households were asked about the presence of working facilities and in 2008 and 2012-13 households were asked about the absence of working facilities.

(b) In 2002 households were asked if they had adequate kitchen cupboard space as part of the food preparation facilities question. Households were not asked this in 2008 and 2012-13. Therefore, when comparing the proportion of households with working facilities for preparing food between 2002 and both 2008 and 2012-13, caution should be used.

— Nil or rounded to zero.

**RSE** = Relative Standard Error.

- (a) There were differences in the question methodology between NATSISS 2002, 2008 and AATSIHS 2012-13 when asking about functional household facilities. In 2002, households were asked about the presence of working facilities and in 2008 and 2012-13 households were asked about the absence of working facilities.
- (b) In 2002, households were asked if they had adequate kitchen cupboard space as part of the food preparation facilities question. Households were not asked this in 2008 and 2012-13. Therefore, when comparing the proportion of households with working facilities for preparing food between 2002, 2008 and 2012-13, caution should be used.

RSE = Relative standard error.

(a) Estimates with a RSE of 25 per cent to 50 per cent should be interpreted with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use.

(b) In the Australian Aboriginal and Torres Strait Islander Health Survey an Indigenous household is defined as an occupied private dwelling where at least one permanent resident identifies as being of Aboriginal or Torres Strait Islander origin.

(c) Data is not comparable with the 2008 National Aboriginal and Torres Strait Islander Social Survey.

(d) Sum of components may exceed total as households may have reported more than one type of structural problem.

(e) Includes households that did not state if they had structural problems.

– Nil or rounded to zero.

RSE = Relative standard error.

(a) Estimates with a RSE of 25 per cent to 50 per cent should be interpreted with caution.

(b) In the National Aboriginal and Torres Strait Islander Social Survey and the Australian Aboriginal and Torres Strait Islander Health Survey an Indigenous household is defined as an occupied private dwelling where at least one permanent resident identifies as being of Aboriginal or Torres Strait Islander origin.

(c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(d) Data is not comparable with the 2008 National Aboriginal and Torres Strait Islander Social Survey.

**RSE** = Relative standard error.

(a) Estimates with a RSE of 25 per cent to 50 per cent should be interpreted with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use.

(b) In the National Aboriginal and Torres Strait Islander Social Survey and the Australian Aboriginal and Torres Strait Islander Health Survey, an Indigenous household is defined as an occupied private dwelling where at least one permanent resident identifies as being of Aboriginal or Torres Strait Islander origin. In the Survey of Income and Housing a non-Indigenous household is defined as a household containing no permanent residents who identified as being of Aboriginal or Torres Strait Islander origin.

(c) Households in collection districts defined as 'very remote' were excluded from the 2007-08 Survey of Income and Housing, accounting for about 23 per cent of the population in the NT.

(d) Includes households that did not state if they had structural problems.

TABLE 10A.3.12

**Table 10A.3.12 Dwellings with major structural problems, by State/Territory, 2008 and 2012-13 (a), (b)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT(c)</i>	<i>Australia</i>
--	-------------	------------	------------	------------	-----------	-----------	------------	------------	--------------	------------------

(e) Sum of components may exceed total as households may have reported more than one type of structural problem.

(f) Excludes households that had rising damp as a major structural problem.

(g) In the 2011-12 Survey of Income and Housing (SIH), data on dwellings with major structural problems was not collected. In the SIH this data is collected as part of the additional housing content that is collected every six years. The additional housing content was collected in 2007-08 SIH and will be collected again in the 2013-14 SIH.

– Nil or rounded to zero. .. Not applicable.

	<i>Unit</i>	<i>Major cities</i>	<i>Inner regional</i>	<i>Outer regional</i>	<i>Total non-remote</i>	<i>Remote</i>	<i>Very remote (d)</i>	<i>Total remote</i>	<i>Australia</i>
--	-------------	---------------------	-----------------------	-----------------------	-------------------------	---------------	------------------------	---------------------	------------------

(c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).

(d) Households in collection districts defined as 'very remote' were excluded from the 2007-08 Survey of Income and Housing.

(e) Includes households that did not state if they had structural problems.

(f) Sum of components may exceed total as households may have reported more than one type of structural problem.

(g) Excludes households that had rising damp as a major structural problem.

(h) In the 2011-12 Survey of Income and Housing (SIH), data on dwellings with major structural problems was not collected. In the SIH this data is collected as part of the additional housing content that is collected every six years. The additional housing content was collected in 2007-08 SIH and will be collected again in the 2013-14 SIH.

.. Not applicable. – Nil or rounded to zero.

**RSE** = Relative standard error.

(a) Estimates with a RSE of 25 per cent to 50 per cent should be interpreted with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use.

(b) In the National Aboriginal and Torres Strait Islander Social Survey and the Australian Aboriginal and Torres Strait Islander Health Survey an Indigenous household is defined as an occupied private dwelling where at least one permanent resident identifies as being of Aboriginal or Torres Strait Islander origin.

(c) The structural problem 'Rising damp' in 2008 was only collected in non-remote areas. Therefore, this table has been limited to households in non-remote areas.

(d) Sum of components may exceed total as households may have reported more than one type of structural problem.

(e) Includes households that did not state if they had structural problems.

TABLE 10A.3.15

**Table 10A.3.15 Dwellings with major structural problems, by remoteness areas (non-remote areas), Indigenous households, 2008 and 2012-13 (a), (b), (c), (d)**

	<i>Unit</i>	<i>Major cities</i>	<i>Inner regional</i>	<i>Outer regional</i>	<i>Total non-remote</i>
--	-------------	---------------------	-----------------------	-----------------------	-------------------------

**RSE** = Relative standard error.

- (a) Estimates with a RSE of 25 per cent to 50 per cent should be interpreted with caution.
- (b) In the National Aboriginal and Torres Strait Islander Social Survey and the Australian Aboriginal and Torres Strait Islander Health Survey an Indigenous household is defined as an occupied private dwelling where at least one permanent resident identifies as being of Aboriginal or Torres Strait Islander origin.
- (c) Remoteness areas are derived from the Australian Statistical Geography Standard (ASGS) developed by the ABS. The ASGS remoteness classification identifies a region in Australia as having a particular degree of remoteness. Remoteness areas comprise five categories: major cities, inner regional, outer regional, remote, and very remote. The degree of remoteness of an area is determined using the Accessibility/Remoteness Index of Australia (ARIA). For more information on how ARIA is defined see the Information Papers ABS Views on Remoteness, 2001 (Cat. no. 1244.0) and Outcomes of ABS Views on Remoteness Consultation, Australia (Cat. no. 1244.0.00.001).
- (d) The structural problem 'Rising damp' in 2008 was only collected in non-remote areas. Therefore, this table has been limited to households in non-remote areas.
- (e) Sum of components may exceed total as households may have reported more than one type of structural problem.
- (f) Includes households that did not state if they had structural problems.
- Nil or rounded to zero. **na** Not available. **np** Not published.

# 11 Safe and supportive communities

---

## Strategic areas for action

Safe and supportive families and communities provide a resilient, caring and protective environment, promoting a range of positive outcomes (sometimes referred to as positive ‘social capital’). However, problems in families and communities can contribute to disrupted social relationships, social alienation, alcohol and drug misuse and family violence.

The indicators in this strategic area for action focus on the key factors that contribute to safe and supportive communities:

- alcohol consumption and harm (section 11.1) — excessive alcohol consumption increases an individual’s risk of death, disease and injury. Alcohol also contributes to family and community related problems, such as child abuse and neglect, work or financial problems, family breakdown, and violence and crime
- drug and other substance use and harm (section 11.2) — drug and other substance misuse contributes to illness and disease, accident and injury, violence and crime, family and social disruption, and workplace problems. Reducing drug related harm can improve health, social and economic outcomes at both individual and community levels
- juvenile diversions (section 11.3) — Aboriginal and Torres Strait Islander young people have a high rate of contact with the juvenile justice system (section 4.12). Police cautioning and conferencing processes can reduce the negative labelling and stigmatisation associated with formal contact with the criminal justice system, and the negative effects of contact with other offenders through the criminal justice system
- repeat offending (section 11.4) — Aboriginal and Torres Strait Islander Australians are over-represented in prisons (section 4.12). It is important that those who have had contact with the criminal justice system have the opportunity to integrate back into the community and lead positive and productive lives. Reducing re-incarceration may also

---

help break the intergenerational offending cycle (whereby incarceration of one generation affects later generations through the breakdown of family structures)

- community functioning (section 11.5) — individual wellbeing is influenced by community wellbeing, and vice versa. Stronger community functioning, as defined by Aboriginal and Torres Strait Islander Australians themselves, will improve social, emotional and economic wellbeing.

Safe and supportive communities can have a positive influence across all the COAG targets and headline indicators. Three headline indicators are particularly associated with breakdown in family and community relationships:

- substantiated child abuse and neglect (section 4.10)
- family and community violence (section 4.11)
- imprisonment and juvenile detention (section 4.12).

Outcomes in the safe and supportive communities strategic area can be affected by outcomes in several other strategic areas for action, or can influence outcomes in other areas:

- governance, leadership and culture (valuing Indigenous Australians and their culture, participation in decision making, engagement with services) (chapter 5)
- early child development (maternal health, teenage birth rate, early childhood hospitalisations, basic skills for life and learning) (chapter 6)
- education and training (school attendance and engagement) (chapter 7)
- healthy lives (mental health, suicide and self-harm) (chapter 8)
- economic participation (employment status, Indigenous owned and controlled land and business, home ownership, income support) (chapter 9)
- home environment (overcrowding, access to water, sewerage and electricity) (chapter 10).

## Attachment tables

Attachment tables for this chapter are identified in references throughout this chapter by an ‘A’ suffix (for example, table 11A.1.1). These tables can be found on the Review web page ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)), or users can contact the Secretariat directly.

---

## 11.1 Alcohol consumption and harm<sup>1</sup>

### Box 11.1.1 Key messages

- Alcohol is a major risk factor affecting the wellbeing of Aboriginal and Torres Strait Islander Australians, and a significant contributor to violence in Aboriginal and Torres Strait Islander communities.
- Based on self-report by Aboriginal and Torres Strait Islander adults in 2012-13:
  - 22.7 per cent reported not consuming alcohol in the previous 12 months (after adjusting for differences in population age structures, this was 1.6 times the rate for non-Indigenous adults)
  - 19.7 per cent reported exceeding lifetime alcohol risk guidelines, similar to 2004-05 (after adjusting for differences in population age structures, this was similar to the proportion for non-Indigenous adults in 2011-12)
  - 57.0 per cent reported exceeding single occasion risk guidelines in the previous 12 months (after adjusting for differences in population age structures, this was 1.1 times the rate for non-Indigenous adults)
    - ... the age adjusted rate for Aboriginal and Torres Strait Islander adults exceeding the guidelines at least once a week was lower than the rate for non-Indigenous adults (ratio of 0.6:1)
    - ... the age adjusted rate for Aboriginal and Torres Strait Islander adults exceeding the guidelines less often than once a week was higher than the rate for non-Indigenous adults (ratio of 2.5:1) (tables 11A.1.1, 11A.1.5, 11A.1.12 and figure 11.1.1).
- Between 2004-05 and 2012-13, after adjusting for differences in population age structures, for NSW, Victoria, Queensland, WA, SA and the NT combined, the acute intoxication hospitalisation rate for Aboriginal and Torres Strait Islander Australians increased from 5.7 to 12.1 times the rate for other Australians (table 11A.1.23).
- From 2003–2007 to 2008–2012, after adjusting for differences in population age structures, for NSW, Queensland, WA, SA and the NT combined, the alcohol induced death rate for Aboriginal and Torres Strait Islander Australians was around 5 times the rate for non-Indigenous Australians (tables 11A.1.26-27).
- In 2011-12, the proportion of Aboriginal and Torres Strait Islander homicides involving both the victim and offender having consumed alcohol at the time of the offence (78.9 per cent — 15 out of 19) was higher than the proportion of non-Indigenous homicides (14.8 per cent — 17 out of 115) (table 11A.1.28).

---

<sup>1</sup> The Steering Committee notes its appreciation to the National Indigenous Drug and Alcohol Committee, which reviewed a draft of this section of the report.

---

### Box 11.1.2 Measures of alcohol consumption and harm

There is one main measure for this indicator (aligned with the associated NIRA indicator). *Levels of risky alcohol consumption* is defined as the proportion of Australians aged 18 years and over who consume alcohol at risky/high risk levels (based on the concept of 'Lifetime risk of alcohol harm' in the NHMRC 2009 guidelines).

The most recent available data are from the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS) for 2012-13 (all jurisdictions; remoteness; sex; age). Comparable non-Indigenous data are sourced from the ABS Australian Health Survey (AHS) with data for 2011-12. Indicators using both AATSIHS (2012-13) and AHS (2011-12) are referenced as 2011–13.

Three supplementary measures are also reported:

- Alcohol related hospitalisations (all jurisdictions; sex; remoteness)
- Alcohol induced deaths (NSW, Queensland, WA, SA and the NT; sex)
- Alcohol involvement in homicides (national).

Alcohol is one of the major risk factors affecting the wellbeing of Aboriginal and Torres Strait Islander Australians (COAG 2012), with harmful alcohol consumption responsible for a considerable burden of death, disease and injury (AIHW 2012; NHMRC 2009; Rehm, Klotsche and Patra 2007). Years of alcohol misuse can lead to chronic diseases, and increase the risk of heart, stroke and vascular diseases, liver cirrhosis, several types of cancers and cognitive impairment (Gao, Ogeil and Lloyd 2014; NHMRC 2009). It also contributes to disability and death indirectly, through accidents, violence, suicide and homicide (Calabria et al. 2010). See section 4.8 for further information on disability and chronic disease, and section 8.8 for further information on suicide and self-harm.

Alcohol-related harm to health is not limited to drinkers but also affects families, bystanders and the broader community (NHMRC 2009). Excessive alcohol consumption contributes to workplace problems, child abuse and neglect, financial problems (poverty), family breakdown, interpersonal/domestic violence, and crime (Laslett et al. 2010; Wild and Anderson 2007). Alcohol is a significant contributor to violence in Aboriginal and Torres Strait Islander communities (HEREOC 2006; Livingston 2011; Meulerners et al. 2010; Wundersitz 2010). Substantiated child abuse and neglect is covered under headline indicator 4.10. Family and community violence is covered under headline indicator 4.11.

The National Health and Medical Research Council (NHMRC) guidelines advise not drinking as the safest option for women who are pregnant or planning a pregnancy (NHMRC 2009). Alcohol consumption during pregnancy may cause physical and neurocognitive disorders termed 'fetal alcohol spectrum disorders' (Fitzpatrick et al. 2012; O'Leary et al. 2007). Section 6.2 includes information on alcohol consumption during pregnancy.

---

## Levels of risky alcohol consumption

In 2009, the NHMRC released new Australian *Alcohol Guidelines to Reduce Health Risks from Drinking Alcohol* (NHMRC 2009). The latest data on levels of risky alcohol consumption are from the ABS Australian Aboriginal and Torres Strait Islander Health Survey for 2012-13 and are based on these guidelines. Historical 2004-05 data are reported according to the 2009 guidelines to provide a comparable time series.

In 2012-13, 22.7 per cent of Aboriginal and Torres Strait Islander adults reported not consuming any alcohol in the previous 12 months (after adjusting for differences in population age structures, this was 1.6 times the rate for non-Indigenous adults) (table 11A.1.5).

### Exceeding lifetime risk guidelines

The 2009 NHMRC guidelines advise that, for healthy men and women, drinking no more than two standard drinks on any day reduces the lifetime risk of harm from alcohol-related disease or injury. These lifetime risk guidelines are the basis of the NIRA indicator on *levels of risky alcohol consumption* (see box 11.1.2).

In 2012-13, 19.7 per cent of Aboriginal and Torres Strait Islander adults reported exceeding lifetime risk guidelines — not significantly different to the proportion in 2004-05 — with a lower proportion in very remote areas (15.6 per cent) (tables 11A.1.1-2 and 11A.1.12).

After adjusting for differences in population age structures, Aboriginal and Torres Strait Islander and non-Indigenous adults reported exceeding the lifetime risk guidelines at much the same rate in 2011-13 (table 11A.1.5). The proportions of Aboriginal and Torres Strait Islander and non-Indigenous adults reported exceeding the lifetime risk guidelines at similar rates in 2004-05 (table 11A.1.16).

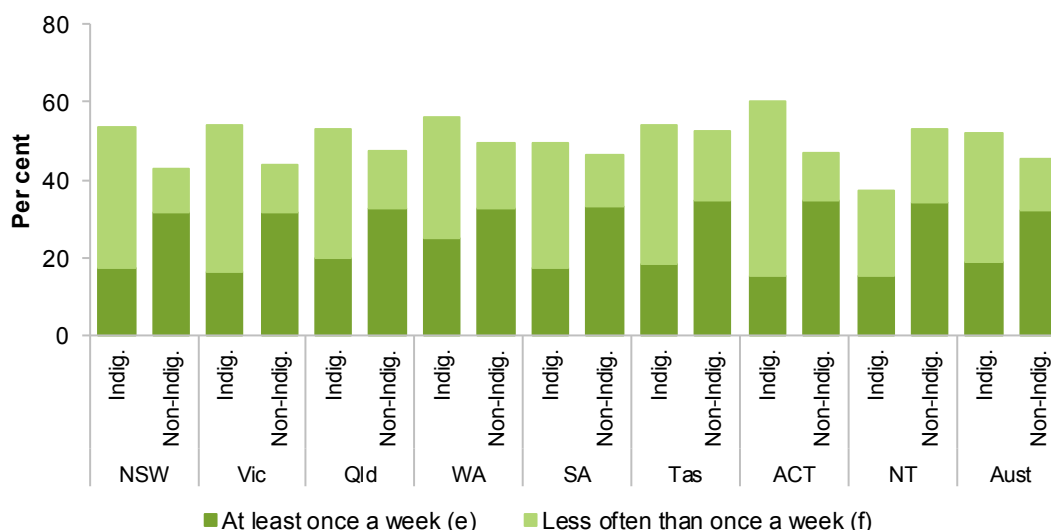

The proportion of Aboriginal and Torres Strait Islander adults that reported exceeding lifetime risk guidelines was lower in very remote areas compared with other areas (specifically inner regional and remote areas), whilst for non-Indigenous Australians the proportion was higher in remote areas compared with major cities (table 11A.1.8).

### Single occasion risk

The NHMRC 2009 guidelines advise that, for healthy men and women, drinking no more than four standard drinks on a single occasion reduces the risk of alcohol-related injury arising from that occasion.

In 2012-13, 57.0 per cent of Aboriginal and Torres Strait Islander adults reported exceeding the single occasion risk guidelines on at least one occasion in the previous 12 months, with a lower proportion in very remote areas (45.3 per cent) (tables 11A.1.1-2).

**Figure 11.1.1 Exceeding single occasion risk guidelines in the previous 12 months, people aged 18 years and over, 2011–13<sup>a,b,c,d</sup>**

<sup>a</sup> Based on responses to questions about frequency of consumption of specified number of drinks in the previous 12 months. 'In the previous 12 months' is defined as persons who exceeded single occasion risk guidelines on at least one occasion in the previous 12 months. The number of drinks was based on the NHMRC guidelines for exceeding single occasion risk guidelines for alcohol consumption for males and females. <sup>b</sup> Data are age standardised. <sup>c</sup> Relative standard errors and 95 per cent confidence intervals should be considered when interpreting these data, and are available in table 11A.1.5. <sup>d</sup> The 2011–13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012–13 AATSIHS. Data for non-Indigenous Australians are from the 2011–13 AHS (for the period 2011–12). <sup>e</sup> Persons who exceeded single occasion risk guidelines at least once a week in the previous 12 months. <sup>f</sup> Persons who exceeded single occasion risk guidelines less than once a week in the previous 12 months.

Sources: ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012–13 (NATSIHS component) and ABS (unpublished) Australian Health Survey 2011–13 (NHS component for 2011–12); table 11A.1.5.

In 2011–13, after adjusting for differences in population age structures, the proportion of Aboriginal and Torres Strait Islander adults exceeding the single occasion risk guidelines at least once a week was lower than for non-Indigenous adults (ratio of 0.6:1). However, a greater proportion of Aboriginal and Torres Strait Islander adults exceeded the guidelines at least once in the previous 12 months (ratio of 2.5:1) (figure 11A.1.1).

The proportion of Aboriginal and Torres Strait Islander adults exceeding single occasion risk was lower in very remote areas compared to other areas, whilst for non-Indigenous adults the proportion was lower in major cities compared to other areas (table 11A.1.8).

The COAG Reform Council (CRC 2014) analysed 2011–13 AATSIHS/AHS data using NHMRC 2001 guidelines on the number of standard drinks in a single session. This analysis showed that, after adjusting for differences in population age structures, among people aged 15 years and over, who drank at least once in the previous 12 months, a higher

---

proportion of Aboriginal and Torres Strait Islander Australians drank higher volumes in a single occasion than non-Indigenous Australians:

- Aboriginal and Torres Strait Islander males reported drinking 11 or more standard drinks (2001 high-risk threshold for males) on a single occasion at 1.3 times the rate of non-Indigenous males
- Aboriginal and Torres Strait Islander females reported drinking 7 or more drinks on a single occasion (2001 high-risk threshold for females) at 1.5 times the rate of non-Indigenous females.

Alcohol risk level data by State and Territory are available in tables 11A.1.1–21.

## **Alcohol related hospitalisations**

Data on hospitalisations related to alcohol use are from the AIHW National Hospital Morbidity Database. These data only cover illnesses and conditions directly attributable to alcohol consumption resulting in admission to a hospital and do not include conditions where alcohol may be a contributing factor but where the link is not direct and immediate (various cancers, liver diseases, and chronic gastritis, some suicides and strokes).

From 2010-11, Indigenous status in hospital separations data are considered of sufficient quality for reporting in all jurisdictions. Prior to 2010-11, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Aboriginal and Torres Strait Islander identification in hospitalisations data. The attachment tables for this report include data for all jurisdictions for 2010-11 to 2012-13, as well as data for the six jurisdictions for 2004-05 to 2012-13.

In 2012-13, after adjusting for differences in population age structures, the most common type of alcohol related hospitalisation for Aboriginal and Torres Strait Islander Australians was for acute intoxication around 12 times the rate for non-Indigenous Australians (table 11A.1.22). The hospitalisation rate for acute intoxication for Aboriginal and Torres Strait Islander Australians in remote and very remote areas was double the rate in major cities (table 11A.1.24).

Between 2004-05 and 2012-13, after adjusting for differences in population age structures, for NSW, Victoria, Queensland, WA, SA and the NT combined, the acute intoxication hospitalisation rate for Aboriginal and Torres Strait Islander Australians increased from 5.7 to 12.1 times the rate for other Australians (table 11A.1.23).

Hospitalisations related to alcohol use data by State and Territory are available in table 11A.1.25.

---

## **Alcohol induced deaths**

Alcohol is responsible for a considerable burden of death in Australia (NHMRC 2009). Mortality data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Aboriginal and Torres Strait Islander identification and numbers of deaths to support analysis.

From 2003–2007 to 2008–2012, after adjusting for differences in population age structures, for NSW, Queensland, WA, SA and the NT combined, the alcohol induced death rate for Aboriginal and Torres Strait Islander Australians was around 5 times the rate for non-Indigenous Australians (tables 11A.1.26-27).

Data on alcohol induced deaths are also available by sex and State and Territory in tables 11A.1.26-27.

## **Alcohol involvement in homicides**

The relationship between excessive alcohol consumption, violence, crime and injury is well documented (see section 4.11; Bryant and Willis 2008; Bryant 2009; HEREOC 2006; Livingston 2011; Meuleners et al. 2010; Snowball and Weatherburn 2006; Wundersitz 2010). The latest data on alcohol related homicides are for 2011-12, from the Australian Institute of Criminology National Homicide Monitoring Program.

Of the 264 recorded homicides in 2011-12 (table 4A.11.35), 144 homicides have known Indigenous status of offender and victim, 19 involved Aboriginal and Torres Strait Islander Australians as both victims and offenders (table 4A.11.37). Of these 19 Aboriginal and Torres Strait Islander homicides, 15 (78.9 per cent) involved both the victim and offender having consumed alcohol at the time of the offence. In comparison, of the 115 homicides involving only non-Indigenous victims and offenders, less than half (38, or 33.0 per cent) had any alcohol involvement (table 11A.1.28).

The number of Aboriginal and Torres Strait Islander homicides fluctuated over the period 1999–2000 to 2011-12. However, the majority of Aboriginal and Torres Strait Islander homicides each year involved alcohol consumption (table 11A.1.28).

## **Things that work**

There is some evidence that supply reduction, demand reduction and harm minimisation may be effective in reducing the impact of excessive alcohol consumption (Gray and Wilkes 2010). However, evaluations carried out on alcohol management plans (AMPs) in Katherine, Tennant Creek and Alice Springs cite difficulties in attributing the changes in consumption, assaults, crime and admissions to sobering shelters solely to the introduction of AMPs (d’Abbs et al. 2010 and Senior et al. 2009 cited in Smith et al. (2013). Hudson (2011) states that, to be effective, alcohol restrictions should go hand in hand with

---

initiatives that address underlying causes, such as lack of education and employment. Similarly, Smith et al. (2013) noted that, when AMPs are implemented, they often narrowly cover supply issues and do not address harm and demand reduction measures (for example, health promotion, treatment and ongoing care), even where these were included in the original design.

The most effective AMPs are those negotiated at a local community level (Smith et al. 2013). Box 11.1.3 provides an example of an effective community-led alcohol restriction measure.

### **Box 11.1.3 Things that work — alcohol consumption and harm**

The **Fitzroy Crossing Liquor Restriction** (WA) was the result of community action. Following representations from local women, in 2007 the WA Director of Liquor Licensing imposed restrictions on liquor outlets in the state's Kimberley region. The restrictions allowed only drinks with less than 2.7 per cent alcohol content to be sold for take-away consumption (Oscar and Pedersen 2011).

An independent evaluation by the University of Notre Dame (at 12 and 24 months after implementation of the alcohol restrictions) involving interviews with 184 people from Fitzroy Crossing and local communities, and a quantitative analysis of police data for the local area, concluded that positive effects on domestic violence, public violence and antisocial behaviour (and an increase in families purchasing more food and clothes) had resulted from introducing a program that restricted the supply of alcohol into the community (Kinnane et al. 2009, 2010).

The benefits appeared to reach a high point at the 12 month mark of the liquor restrictions, with a gradual erosion of benefits over the following 12 months (although the overall impact of the restriction remained positive). Many respondents considered that the reduced benefits were due in part to the missed opportunity of the State to follow up on promised programs and support, and due to a fire that destroyed the local shopping centre.

Initially imposed for a six-month period, the restrictions have now been extended indefinitely, with an annual review to test ongoing effectiveness (Kinnane et al. 2010). In May 2009, similar restrictions on the sale of take-away alcohol were imposed in the neighbouring town of Halls Creek, followed by other remote Kimberley communities.

---

## Future directions in data

The AATSIHS and AHS collected a range of other health-related information that can be analysed in conjunction with alcohol risk level. Aggregate levels of alcohol consumption for the total population implied by the AHS are somewhat less than the estimates of consumption of alcohol based on taxation and customs data (ABS 2013). This suggests a tendency towards underreporting of alcohol consumption in self-report surveys.

The three yearly AIHW National Drug Strategy Household Survey (most recently conducted in 2013, with full results anticipated for release in November 2014) has a small Aboriginal and Torres Strait Islander sample (461 respondents in the 2013 survey), and is not designed to make robust comparisons between Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians. The AIHW is working on improving Aboriginal and Torres Strait Islander coverage in this survey.

## 11.2 Drug and other substance use and harm<sup>2</sup>

### Box 11.2.1 Key messages

- In 2012-13, around half (47.3 per cent) of Aboriginal and Torres Strait Islander adults in non-remote areas reported never having used substances. This was similar to the proportion in surveys in 2004-05 and 2008 (table 11A.2.1).
- The proportion of Aboriginal and Torres Strait Islander adults in non-remote areas reporting illicit substance use in the 12 months prior to interview was similar between 2002 and 2012-13. However, the proportion increased (although not statistically significantly) from 25.5 per cent in 2002 to 28.0 per cent in 2004-05, before falling to 23.4 per cent in 2012-13, driven by a decrease in reported use by females (from 24.4 per cent in 2004-05 to 19.4 per cent in 2012-13) (table 11A.2.1 and figure 11.2.1).
- Between 2004-05 and 2012-13, after adjusting for differences in population age structures, for NSW, Victoria, Queensland, WA, SA and the NT combined:
  - rates of hospitalisation for poisoning for Aboriginal and Torres Strait Islander Australians increased from 1.3 to 2.3 times the rate for other Australians
  - rates of hospitalisation for mental/behavioural disorders for Aboriginal and Torres Strait Islander Australians increased from 2.5 to 3.0 times the rate for other Australians (table 11A.2.5).
- From 2003-2007 to 2008-2012, after adjusting for differences in population age structures, for NSW, Queensland, WA, SA and the NT combined, the drug-induced death rate for Aboriginal and Torres Strait Islander Australians was consistently around 1.5 times the rate for non-Indigenous Australians (tables 11A.2.8-9).
- In 2011-12, a smaller proportion of Aboriginal and Torres Strait Islander homicides had drug involvement (3 out of 19) than non-Indigenous homicides (33 out of 115) (table 11A.2.10).

### Box 11.2.2 Measures of drug and other substance use and harm

There is one main measure for this indicator. *Substance use* is defined as the proportion of people aged 18 years and over who reported using illicit substances or misusing licit substances in the previous 12 months. Data are sourced from the ABS *Australian Aboriginal and Torres Strait Islander Health Survey* (AATSIHS)/*National Aboriginal and Torres Strait Islander Social Survey* (NATSISS), with the most recent available data for 2012-13 (all jurisdictions; sex; age). Data are not available for non-Indigenous Australians or (for the 2004-05 survey) remote areas. To maintain a comparable time series, the majority of survey data presented in this section relate to non-remote areas only.

(continued next page)

---

<sup>2</sup> The Steering Committee notes its appreciation to the National Indigenous Drug and Alcohol Committee, which reviewed a draft of this section of the report.

---

**Box 11.2.2 (continued)**

Three supplementary measures are also reported by Indigenous status:

- Drug related hospitalisations (all jurisdictions; sex; remoteness)
- Drug induced deaths (NSW, Queensland, WA, SA and the NT; sex)
- Drug involvement in homicides (national).

The misuse of legal drugs has major negative effects on individuals, families and communities (see section 11.1 ‘Alcohol consumption and harm’, and section 8.4 ‘Tobacco consumption and harm’). However, use of illicit drugs also has significant effects. The use of illicit drugs contributes to illness and disease, accidents and injury, violence and crime, family and social disruption, and workplace problems (Catto and Thomson 2008).

Illicit substance use can be divided into two categories: use of substances which are illegal to possess (such as heroin) and misuse of substances which are legally available (such as petrol sniffing or misuse of prescription drugs). Use of the term ‘illicit substance use’ in this section also refers to the misuse of legal substances.

## **Substance use**

Data on the use of illicit drugs are derived from surveys. The sensitive and personal nature of these questions may affect respondents’ willingness to respond (acceptance of the substance use form), and the nature of the responses.

Nationally in 2012-13, reported substance use<sup>3</sup> for Aboriginal and Torres Strait Islander Australians aged 15 years and over was lower in remote areas (18.8 per cent) than in non-remote areas (23.3 per cent) (ABS 2014).

The rest of this section reports data on non-remote areas for Aboriginal and Torres Strait Islander Australians (aged 18 years and over), to enable time series comparison across all four survey periods.

In 2012-13, for Aboriginal and Torres Strait Islander adults in non-remote areas:

- around half (47.3 per cent) reported never having used substances. This was similar to the proportion in surveys in 2004-05 and 2008 (table 11A.2.1)
- a greater proportion in the 55 years and over age group (75.4 per cent) reported never having used substances than those in other age groups (between 37.9 per cent and 46.9 per cent) (table 11A.2.3)

---

<sup>3</sup> Substance use questions were self-completed by respondents in non-remote areas, whereas respondents in remote areas were asked these questions via personal interview.

- a greater proportion of females (53.4 per cent) than males (40.6 per cent) reported never having used substances (figure 11.2.1).

**Figure 11.2.1 Substance use for Indigenous people aged 18 years and over (non-remote areas), by sex, 2002 to 2012-13<sup>a</sup>**

<sup>a</sup> Relative standard errors and 95 per cent confidence intervals should be considered when interpreting these data, and are available in attachment table 11A.2.2.

Sources: ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2002; ABS (unpublished) National Aboriginal and Torres Strait Islander Health Survey 2004-05; ABS (unpublished) National Aboriginal and Torres Strait Islander Social Survey 2008; ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012-13 (NATSIHS component); table 11A.2.2.

The proportion of Aboriginal and Torres Strait Islander adults reporting illicit substance use in the 12 months prior to interview was similar between 2002 and 2012-13. However, increased (although not statistically significantly) from 25.5 per cent in 2002 to 28.0 per cent in 2004-05, before falling to 23.4 per cent in 2012-13 (table 11A.2.1), driven by a decrease in reported use by females (from 24.4 per cent in 2004 -05 to 19.4 per cent in 2012-13) (figure 11.2.1).

In surveys in 2002, 2004-05, 2008 and 2012-13, for adults in non-remote areas:

- higher proportions of males than females reported using substances in the 12 months prior to interview (27.7 per cent of males compared with 19.4 per cent of females in 2012-13) (figure 11.2.1).
- ‘marijuana, hashish or cannabis resin’ were the most commonly used drugs for both males (24.2 per cent in 2012-13) and females (14.7 per cent in 2012-13) (table 11A.2.2).

---

Illicit substance use for different age groups has changed over time:

- the proportion of 25–34 year olds using illicit substances in the 12 months prior to interview decreased from 37.7 per cent in 2004-05 to 28.3 per cent in 2012-13
- the proportion of 45–54 year olds who had used illicit substances but not in the 12 months prior to interview increased from 15.5 per cent in 2002 to 31.8 per cent in 2012-13, with a corresponding decrease in the proportion of 45–54 year olds who had never used illicit substances (from 71.4 per cent to 43.6 per cent) (table 11A.2.3).

## **Drug related hospitalisations**

Data on hospitalisations related to drug use are from the AIHW National Hospital Morbidity Database. These data only cover illnesses and conditions directly attributable to drug use that result in admission to a hospital. They do not include conditions where drug use may be a contributing factor but where the link is not direct and immediate.

From 2010-11, Indigenous status in hospital separations data are considered of sufficient quality for reporting in all jurisdictions. Prior to 2010-11, six jurisdictions (NSW, Victoria, Queensland, WA, SA and the NT) were considered to have acceptable quality of Indigenous identification in hospitalisation data. The attachment tables for this report include data for all jurisdictions for 2010-11 to 2012-13, as well as data for the six jurisdictions for 2004-05 to 2012-13.

In 2012-13, after adjusting for differences in population age structures:

- the most common drug-related conditions resulting in hospitalisations of both Aboriginal and Torres Strait Islander and non-Indigenous Australians were ‘poisoning’ and ‘mental and behavioural disorders’ (table 11A.2.4)
- the hospitalisation rate for Aboriginal and Torres Strait Islander Australians for mental and behavioural disorders caused by drug use was around three times the rate for non-Indigenous Australians (table 11A.2.4)
- the hospitalisation rate for Aboriginal and Torres Strait Islander Australians for poisoning was more than twice the rate for non-Indigenous Australians (table 11A.2.4)
- the hospitalisation rate for drug related conditions for Aboriginal and Torres Strait Islander Australians decreased with remoteness (except for accidental poisoning) (table 11A.2.6).

Between 2004-05 and 2012-13, after adjusting for differences in population age structures, for NSW, Victoria, Queensland, WA, SA and the NT combined:

- rates of hospitalisation for poisoning for Aboriginal and Torres Strait Islander Australians increased from 1.3 to 2.3 times the rate for other Australians

- 
- rates of hospitalisation for mental and behavioural disorders for Aboriginal and Torres Strait Islander Australians increased from 2.5 to 3.0 times the rate for other Australians (table 11A.2.5).

Hospitalisations related to drug use data by State and Territory are available in table 11A.2.7.

## **Drug induced deaths**

Mortality data disaggregated by Indigenous status are available for NSW, Queensland, WA, SA and the NT, as these jurisdictions have sufficient levels of Aboriginal and Torres Strait Islander identification and numbers of deaths to support analysis.

From 2003–2007 to 2008–2012, after adjusting for differences in population age structures, for NSW, Queensland, WA, SA and the NT combined, the drug induced death rate for Aboriginal and Torres Strait Islander Australians was consistently around 1.5 times the rate for non-Indigenous Australians (tables 11A.2.8-9).

## **Drug involvement in homicides**

Of the 264 recorded homicides in 2011-12 (table 4A.11.35), 144 homicides have known Indigenous status of offender and victim (table 4A.11.37):

- 19 homicides involved Aboriginal and Torres Strait Islander Australians as both victims and offenders (table 4A.11.37). In three of these homicides, the victim was under the influence of drugs. There were no cases in which the offender was under the influence of drugs
- 115 homicides involved only non-Indigenous victims and offenders. Of these homicides, 33 (28.7 per cent) had drug involvement — 15 (13.0 per cent) involved the victim under the influence of drugs, 10 (8.7 per cent) involved the offender under the influence of drugs and eight (7.0 per cent) involved both the offender and victim under the influence of drugs
- 10 homicides involved Aboriginal and Torres Strait Islander Australians as either the victim or the offender. Of these homicides, two had drug involvement — in one homicide both victim and offender were under the influence of drugs, and in the other only the offender was under the influence of drugs (table 11A.2.10).

The number of Aboriginal and Torres Strait Islander homicides and the influence of drugs on the victim and/or offender fluctuated with no clear trend over the period 1999–2000 to 2011-12 (table 11A.2.10).

---

## Things that work

The misuse of substances such as inhalants (for example, petrol, glue, paint and butane gas) can lead to serious health consequences, including long term brain damage, disability or even death. It can also cause the social alienation of users and contribute to violence and crime (Access Economics 2006; Community Affairs References Committee 2006). Box 11.2.3 provides an example of how petrol sniffing is being addressed in central Australian communities.

### Box 11.2.3 Things that work — drug and other substance use and harm

The Steering Committee considers that, although the program below has not been recently evaluated, the introduction of Opal fuels, together with access to support services, appears to have been a successful program to address petrol sniffing. A follow-up evaluation to assess the long term impact of the program would be valuable.

**OPAL fuel** (a low aromatic fuel) was introduced in the NT and WA in 2006, to reduce the harmful, risky health behaviour of petrol sniffing, and to prevent associated antisocial behaviour, offending and contact with the criminal justice system. OPAL fuel, when sniffed does not produce the 'high' that is produced by traditional petrol.

An independent evaluation by d' Abbs and Shaw (2008) found that the prevalence of sniffing had declined in 17 out of 20 sample communities in which OPAL fuel had been introduced (and an increase in communities with no petrol sniffing from two to nine). There had been a decrease of 431 (70 per cent) in the number of people sniffing between baseline (2005–2006) and follow up (March–May 2008).

The evaluation concluded that, although decreased petrol sniffing could not be attributed solely to the introduction of OPAL fuel, many community residents believed that it had made a significant contribution. The evaluators emphasised the role of access to services supporting young people to engage in alternative activities that promoted wellbeing (d' Abbs and Shaw 2008 cited in Osborne, Baum and Brown 2013).

*Sources: d' Abbs, P. and Shaw, G. 2008, Executive Summary of the 'Evaluation of the Impact of Opal Fuel', Commonwealth Department of Health and Ageing; Osborne, K., Baum, F. and Brown, L. 2013, What works? A review of actions addressing the social and economic determinants of Indigenous health, Closing the Gap Clearinghouse publication, Issues Paper no. 7 produced for the Closing the Gap Clearinghouse, Australian Institute of Health and Welfare and the Australian Institute of Family Studies, Canberra.*

## Future directions in data

Alcohol and other drug use is believed to be higher among Aboriginal and Torres Strait Islander Australians than among non-Indigenous Australians for many drugs. However, available data sources are subject to a range of limitations and should be used with caution. An accurate account of prevalence levels is not possible with current datasets (NIDAC unpublished).

---

The National Drug Strategy 2010–2015 committed to the development of a National Aboriginal and Torres Strait Islander Peoples Drug Strategy (the Strategy), in recognition of the unique needs of Aboriginal and Torres Strait Islander people. The Strategy (currently being finalised) will set a national direction for reducing harm among Aboriginal and Torres Strait Islander peoples (Australian Government unpublished).

The three yearly AIHW National Drug Strategy Household Survey (most recently conducted in 2013, with full results anticipated for release in November 2014) has a small Aboriginal and Torres Strait Islander sample (461 respondents in the 2013 survey), and is not designed to make robust comparisons between Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians. The AIHW is working on improving Aboriginal and Torres Strait Islander coverage in this survey.

## 11.3 Juvenile diversions<sup>4</sup>

### Box 11.3.1 Key messages

- Diversion of young offenders from the criminal justice system can be a swift and economically efficient response to offending, by reducing negative labelling and stigmatisation, and the negative effects of contact with other offenders.
- Rates of diversion from formal criminal justice processes for Aboriginal and Torres Strait Islander young people aged 10–17 years are around one-half to two-thirds those for non-Indigenous young people, and have remained relatively unchanged over recent years (figures 11.3.1 to 11.3.6, table 11A.3.32).

### Box 11.3.2 Measures of Juvenile diversions

There is one main measure for this indicator. *Juvenile diversions* is defined as the proportion of all alleged young offenders who are diverted from court proceedings (that is, from the formal criminal justice system).

The most recent available data are for 2012 (or the 2012-13 financial year for some jurisdictions) (NSW, Victoria, Queensland, WA, SA, the NT and the ACT; sex). Data disaggregated by Indigenous status are not available for Tasmania.

Aboriginal and Torres Strait Islander Australians are overrepresented in the criminal justice system, as both victims and offenders. Section 4.10 includes information on child protection and section 4.11 includes information on family and community violence. Section 4.12 includes information on imprisonment and juvenile detention.

Police cautioning and conferencing processes are swift and economically efficient responses to offending. They can also reduce the negative labelling and stigmatisation associated with formal contact with the criminal justice system, and the criminogenic effects of contact with other offenders through the criminal justice system (see section 11.4 on repeat offending) (Allard et al. 2010; Juodo 2008).

Diversion can occur at any point following initial contact with police — pre-arrest, pre-trial, pre-sentence, post-sentence and pre-release. While diversion involves any process that prevents young people from entering or continuing in the formal criminal justice system, it typically involves pre-court processes such as police cautioning or conferencing (Allard et al. 2010; Juodo 2008; Richards 2010).

Cautioning and conferencing are typically available to first time and non-serious offenders. Sufficient evidence to establish that an offence took place, an admission of guilt and the

---

<sup>4</sup> The Steering Committee notes its appreciation to Dr Kyllie Cripps, University of NSW, who reviewed a draft of this section of the report.

---

young person's consent to engage in the cautioning or conferencing process is required for a diversion to occur (Allard et al. 2010).

Two research studies (on young people who had contact with the youth justice system in NSW, WA, SA; and Queensland) found that, even after controlling for the effects of age, sex, offence type and offending history, Aboriginal and Torres Strait Islander young offenders were less likely than non-Indigenous young offenders to be diverted (Snowball (2008) and Allard et al (2010) cited in Richards (2010)). However, a number of other factors which could not be assessed may explain at least some of this difference, such as whether the young person was willing to plead guilty (a requirement for eligibility for diversion).

State and Territory governments have individual responsibility for youth diversions, with approaches varying from informal police cautioning to legislated youth conferencing. Differences in programs and data collection mean that data are not comparable across jurisdictions.

In each jurisdiction except Queensland, a youth is defined as a person aged 10 to 17 years (in Queensland, a youth is defined as a person aged 10 to 16 years). Children under 10 years of age cannot be held legally responsible for their actions (Richards 2011).

## **New South Wales**

Youth diversions in NSW are legislated under the *Young Offenders Act 1997 (NSW)* and administered by the NSW Department of Juvenile Justice. Under the Act, young offenders can be diverted using warnings, police cautions and youth justice conferences. Warnings apply for the least serious offences, while more serious offences may elicit cautions, conferences and finally court for the most serious offences. Infringement notices consisting of an on-the-spot fine can be issued for certain offences.

NSW data are from police records and represent persons of interest — alleged offenders who have come to the attention of NSW Police for a recorded criminal incident.

**Figure 11.3.1 Proportion of alleged young offenders (aged 10–17 years) diverted, New South Wales, 2004 to 2012<sup>a</sup>**

<sup>a</sup> Data represents persons of interest (POIs) or alleged offenders who have come to the attention of NSW Police for a recorded criminal incident (driving offences are excluded). Some POIs are formally proceeded against to court and some are proceeded against other than to court whilst others are not proceeded against. The POIs included have all been proceeded against. POIs are not a count of unique offenders. Where an individual is involved in multiple criminal incidents throughout the year they will appear as a POI multiple times.

Source: NSW Bureau of Crime Statistic & Research (unpublished), table 11A.3.1.

In 2012, 34.2 per cent of Aboriginal and Torres Strait Islander alleged young offenders received a diversion by police. This rate has been relatively steady over time, ranging between 31 per cent and 36 per cent from 2004 to 2012 (figure 11.3.1). Over this period, Aboriginal and Torres Strait Islander alleged young offenders were diverted at around half the rate of non-Indigenous alleged young offenders (70.2 per cent in 2012) (figure 11.3.1).

These rates may be affected by the type of alleged offence. For Aboriginal and Torres Strait Islander alleged young offenders, the most common type of offence was ‘theft’ (30.4 per cent), with around two in five diverted (compared with around three in five non-Indigenous alleged young offenders diverted for this offence type). For non-Indigenous alleged offenders, the most common type of offence was ‘transport regulatory offences’ (36.1 per cent) (table 11A.3.3). Data on diversions by sex and offence type are available in table 11A.3.2.

## Victoria

In Victoria, data on youth apprehensions describe offences charged by police as either an ‘arrest’ or ‘summons’, while a diversion is described as a ‘caution’. Victoria is the only

---

state where the cautioning of offenders is not legislated — it is left to the discretion of police officers. Indigenous status is derived from the racial appearance of the offender, which is a subjective assessment by the police officer.

---

**Figure 11.3.2 Proportion of alleged young offenders (aged 10–17 years) cautioned when processed by police, Victoria, 2004-05 to 2012-13<sup>a,b</sup>**

<sup>a</sup> Indigenous status is derived from the racial appearance of the offender which is a subjective assessment of the police officer. <sup>b</sup> Percentages are based on the proportion of young offenders cautioned when first processed by police in a financial year.

Source: Victoria Police (unpublished); table 11A.3.6.

---

In 2012-13, 8.6 per cent of Aboriginal and Torres Strait Islander alleged young offenders were formally cautioned, around half the rate of non-Indigenous alleged young offenders (18.3 per cent) (figure 11.3.2). The diversion rate for Aboriginal and Torres Strait Islander alleged young offenders has fluctuated over time, ranging between 8.6 per cent and 14.7 per cent from 2004-05 to 2012-13 (figure 11.3.2). The diversion rate for non-Indigenous alleged young offenders has declined from a high of 30.9 per cent in 2006-07 to 18.3 per cent in 2012-13 (figure 11.3.2).

In 2012-13, the most common type of offence for both Aboriginal and Torres Strait Islander alleged young offenders and non-Indigenous alleged young offenders was ‘crime against property’ (around 60 per cent) followed by ‘crime against the person’ (around 20 per cent) (table 11A.3.8). Historical data on diversions by type of offence are available in tables 11A.3.9–16. Data on by sex and offence type are available in table 11A.3.7.

---

## Queensland

In Queensland, police data include the diversionary methods of ‘caution’ and ‘community conference’ as alternatives to ‘arrest’, ‘notice to appear’, ‘summons’ or ‘warrant’. Offender statistics are based on offence counts and should be interpreted with caution.

---

**Figure 11.3.3 Proportion of alleged young offenders (aged 10–16 years) diverted, Queensland, 2006-07 to 2012-13<sup>a,b</sup>**

<sup>a</sup> Only those offenders whose age, sex and Indigenous status were identified are included. <sup>b</sup> Indigenous status is based on self-identification by the young offender.

Source: Queensland Police Service (various years), *Annual Statistical Review 2011-12* (and various years); tables 11A.3.17 to 11A.3.23.

---

In 2012-13, 24.0 per cent of Aboriginal and Torres Strait Islander alleged young offenders were cautioned or had a community conference, compared with 42.5 per cent of non-Indigenous alleged young offenders (figure 11.3.3). The diversion rate for Aboriginal and Torres Strait Islander alleged young offenders has fluctuated over time, ranging between 24.0 per cent and 32.0 per cent from 2006-07 to 2012-13 (figure 11.3.3). The diversion rate for non-Indigenous alleged young offenders has decreased from 57.6 per cent in 2006-07 to 42.5 per cent in 2012-13 (figure 11.3.3).

In 2012-13, for all alleged young offenders, the most common types of offences were offences against property including ‘unlawful entry’ and ‘theft’ (72.1 per cent for Aboriginal and Torres Strait Islander, and 58.2 per cent for non-Indigenous, alleged young offenders) (table 11A.3.17). Historical data on diversions by type of offence are available in tables 11A.3.18–23.

---

## Western Australia

Youth diversions are legislated under the *Young Offenders Act 1994 (WA)*. Under the Act, police officers can issue young offenders with a formal written caution, or the matter can be transferred to a Juvenile Justice Team (JJT) via police or court referral. Where the matter is referred to a JJT, young people are held accountable for their offending behaviour through meetings with their families, victims and police. No criminal conviction is recorded against the young person.

---

Figure 11.3.4 **Proportion of alleged young offenders (aged 10–17 years) diverted, Western Australia, 2008-09 to 2012-13<sup>a,b</sup>**

<sup>a</sup> WA youth diversions include formal cautions and referrals to Juvenile Justice Teams as a proportion of the total recorded number of young people diverted or arrested. <sup>b</sup> Percentages are based on the proportion of young offenders cautioned when first processed by police in a financial year.

Source: WA Police (unpublished) FrontLine Incident Management System; table 11A.3.24.

---

In 2012-13, 35.1 per cent of Aboriginal and Torres Strait Islander alleged young offenders were diverted through caution or transferred to a JJT, compared with 58.2 per cent of non-Indigenous alleged young offenders (figure 11.3.4). The diversion rate for Aboriginal and Torres Strait Islander alleged young offenders increased from 29.5 per cent in 2008-09 to 40.5 per cent in 2011-12, while the diversion rate for non-Indigenous alleged young offenders has been relatively steady at around 60 per cent (figure 11.3.4). Diversions to a JJT decreased in 2012-13, to 2008-09 levels (table 11A.3.24).

---

## South Australia

The South Australian *Young Offenders Act 1993 (SA)* legislates for a three tiered system of diversion, involving informal cautions, formal cautions and family conferences.

---

Figure 11.3.5 **Proportion of alleged young offenders diverted (aged 10–17 years), South Australia, 2004 to 2012<sup>a,b,c,d</sup>**

<sup>a</sup> Prior to 1 July 2007 the recording of the racial identity of the alleged offender largely reflected the apprehending officer's opinion based on the physical appearance of the individual. From 1 July 2007, SA Police adopted the standard ABS question on Indigenous status for alleged offenders. <sup>b</sup> Youth diversions include both formal cautions and transfers to a family conference. <sup>c</sup> There are some counting rule differences between Office of Crime Statistics and Research and SA Police data on youth diversions. Moreover, SA Police's recently refreshed data would show slightly higher proportions of diversions each year, as offences occurring in one reporting period may not receive a family conference until the next reporting period. <sup>d</sup> Numbers of youth apprehensions exclude those offences with an unknown method of processing.

Sources: Office of Crime Statistics and Research (OCSAR) 2005, *Crime and Justice in SA—Juvenile Justice 2004*, Attorney-General's Department, South Australia; OCSAR 2006, *Crime and Justice in SA—Juvenile Justice 2005*, Attorney-General's Department, South Australia; OCSAR 2010, *Crime and Justice in SA—Juvenile Justice 2007*, no. 44(2); OCSAR 2014 (unpublished), Attorney-General's Department, South Australia; table 11A.3.25.

---

In 2012, 30.5 per cent of Aboriginal and Torres Strait Islander alleged young offenders were diverted through formal caution or transfer to family conference, compared with 52.9 per cent for non-Indigenous alleged young offenders. The difference between Aboriginal and Torres Strait Islander and non-Indigenous youth diversions has remained similar since 2008 at around 20 percentage points (figure 11.3.5).

From 2004 to 2012, for both Aboriginal and Torres Strait Islander and non-Indigenous young offenders, the most common types of offences were 'larceny and receiving' and

---

‘offences against good order’, accounting for over half of all offences (tables 11A.3.26 to 11A.3.30).

## Northern Territory

Northern Territory police data refer to apprehension cases rather than individual persons, and several cases can relate to the same offender.

---

**Figure 11.3.6 Proportion of youth apprehensions diverted (aged 10–17 years), Northern Territory, 2002 to 2013<sup>a,b</sup>**

<sup>a</sup> Indigenous status is based on self-identification by the young person. <sup>b</sup> Where cases did not result in a diversion, these cases either proceeded to court or were resolved in some other manner (it is not an indicator of the number of matters referred to the courts).

Source: NT Police (unpublished); table 11A.3.31.

---

In 2013, 28.3 per cent of Aboriginal and Torres Strait Islander alleged young offenders were diverted, compared with 40.4 per cent of non-Indigenous alleged young offenders. The proportions of Aboriginal and Torres Strait Islander and non-Indigenous youth diversions fluctuated between 2002 and 2013 with no discernible trend but with a gap in all years except 2007 (figure 11.3.6). Data on diversions by sex are available in table 11A.3.31.

## Australian Capital Territory

In the ACT, the proportion of youth diversions has been calculated on total recorded police contacts with young people, which includes youth cautions, referrals to diversionary

---

conferencing, young people taken into protective custody and charges pertaining to young people.

In 2012-13, 25.0 per cent of Aboriginal and Torres Strait Islander alleged young offenders were diverted, compared with 40.0 per cent of non-Indigenous alleged young offenders (table 11A.3.32). Data on diversions by sex are available in table 11A.3.32.

## Things that work

Some programs that have successfully made diversionary alternatives more accessible for Aboriginal and Torres Strait Islander alleged young offenders are described in box 11.3.3.

### Box 11.3.3 Things that work — juvenile diversions

Although not formally evaluated, the Steering Committee has identified the two programs below as promising practices worth further examination.

**Ignite Basketball** (WA) aims to divert young people aged 12 to 17 years from the Armadale to Perth train lines and Northbridge on Saturday nights, as a way of reducing crime and antisocial behaviour. The program runs for 40 weeks of the year, hosting basketball games and, more recently, providing psychological support and counselling, including linking participants and families to referral agencies for ongoing support. Over 360 young people are registered in the program, with approximately 85 per cent identifying as Aboriginal and/or Torres Strait Islander.

Since the inception of the program, the number of youth being detained in the Northbridge precinct has decreased: 102 in 2009, 45 in 2010, 27 in 2011, 48<sup>1</sup> in 2012, 27 in 2013 (WA Government unpublished).

The **Regional Youth Justice Services** (WA) was introduced by the Department of Corrective Services in 2008. The program focuses on the prevention and diversion of young people from formal justice processes through the provision of advice and support, youth bail options, in-court assistance and supervision of community based orders.

The program was initially trialled in Kalgoorlie and Geraldton. The number of police cautions in Kalgoorlie increased by 41.4 per cent, and the number of police and judge referrals to a Juvenile Justice Service team in Geraldton increased by 82 per cent (DIA 2010). Regional Youth Justice Services have since been adopted in other regions and currently operate in the Goldfields, Mid-West Gascoyne, West Kimberley, East Kimberley and the Pilbara regions (DOCS 2014).

<sup>1</sup> The increase in the number of young people detained in 2012 may have been due to a lapse of a few months in program delivery (due to lack of funding).

*Sources:* DOCS (Department of Corrective Services, The Government of Western Australia) 2014, Regional Youth Justice Services, <http://www.correctiveservices.wa.gov.au/youth-justice/regional-youth-justice.aspx> (accessed 4 July 2014); DIA (Department of Indigenous Affairs, The Government of Western Australia) 2010, Closing the gap in Western Australia, [http://www.dia.wa.gov.au/PageFiles/1442/COAG\\_Newsletter\\_December2010\\_Edition3%20\(2\).pdf](http://www.dia.wa.gov.au/PageFiles/1442/COAG_Newsletter_December2010_Edition3%20(2).pdf) (accessed 4 July 2014).

---

## Future directions in data

Nationally comparable data on youth diversions by Indigenous status is a key data gap. Whilst data are collected on alleged offenders in the ABS Recorded Crime Offenders collection, the data quality for Indigenous status is currently not sufficient for national reporting purposes. The Aboriginal and Torres Strait Islander status of an alleged offender is based on self-identification by the individual who comes into contact with police. Aboriginal and Torres Strait Islander identification is difficult to ascertain where police proceed by way of a penalty/infringement notice, as this method does not usually provide an opportunity for police to ask individuals to self-identify (ABS unpublished).

To assist in explaining the differences in diversion rates between Aboriginal and Torres Strait Islander and non-Indigenous youth, information is also required on whether they agreed to plead guilty to the alleged offence to be eligible for diversion.

## 11.4 Repeat offending<sup>5</sup>

### Box 11.4.1 Key messages

- Repeat offending and re-incarceration are significant contributors to the over-representation of Aboriginal and Torres Strait Islander Australians in the youth justice and criminal justice systems.
- Nationally on 30 June 2013, 77.0 per cent of Aboriginal and Torres Strait Islander prisoners and 50.9 per cent of non-Indigenous prisoners had a known prior imprisonment. These proportions have remained relatively unchanged since 2000 (table 11A.4.1).
- A higher proportion of Aboriginal and Torres Strait Islander male prisoners (77.9 per cent) than Aboriginal and Torres Strait Islander female prisoners (67.8 per cent) had experienced prior adult imprisonment (figure 11.4.2).
- In 2011-12, Aboriginal and Torres Strait Islander young people returned to youth justice supervision at between 1.3 and 1.5 times the rate of non-Indigenous young people (AIHW 2013).
- In NSW, Queensland, SA, and the NT in 2012-13, 40 to 47 per cent of Aboriginal and Torres Strait Islander offenders were proceeded against by police on more than one occasion, compared with 20 to 28 per cent of non-Indigenous offenders (table 11A.4.3).

### Box 11.4.2 Measures of repeat offending

There is currently no systematic national definition and data collection of repeat offending. This section focuses on the re-incarceration aspect of repeat offending. There are two main measures for this indicator.

- *Adult re-imprisonment* is defined as the proportion of prisoners currently under sentence with known prior adult imprisonment
- *Youth returns to sentenced supervision* is defined as the proportion of young people who return to sentenced supervision (over three timeframes — within 1 year, 2 years, and during the entire time for which a young person is treated as a youth and therefore eligible to return).

The most recent available data for adult re-imprisonment are from the ABS Prisoners in Australia collection for 30 June 2013 (all jurisdictions; sex). The most recent available data for returns to sentenced supervision are from the AIHW Juvenile Justice National Minimum Dataset (National). The AIHW data are available for the first time in this OID report. Some cohort studies measuring longitudinal outcomes of youth offending patterns have been published in previous OID reports.

A supplementary measure on the proportion of offenders who were proceeded against by police on more than one occasion is also reported (NSW, Queensland, SA and the NT; age; sex).

---

<sup>5</sup> The Steering Committee notes its appreciation to Dr Kyllie Cripps, University of NSW, who reviewed a draft of this section of the report.

---

This section focuses on repeat offending. Imprisonment and juvenile detention are covered under section 4.12.

Repeat offending is defined as the reversion of an individual to criminal behaviour after he or she has been convicted of a prior offence. Repeat offending and re-incarceration are significant contributors to the over-representation of Aboriginal and Torres Strait Islander Australians in the youth justice and criminal justice systems (CTGCH 2013; Snowball and Weatherburn 2006). Weatherburn et al. (2009) found that a 10 per cent reduction in Aboriginal and Torres Strait Islander re-imprisonment would reduce the prison population by an estimated 365 prisoners, whilst the an equivalent reduction in the rate at which new Aboriginal and Torres Strait Islander sentenced prisoners arrive in custody would reduce the population by an estimated 166 prisoners.

Many factors contribute to the re-offending behaviour of an individual.

Payne (2007) canvassed the literature on recidivism in Australia and found that certain characteristics are predictive of repeat offending, including:

- age of offender — criminal offending peaks in the mid to late teens, diminishing in adulthood
- criminal history — the younger the age of first offence, the greater the likelihood of higher levels of offending
- sex — for the majority of offences, females are less likely to reoffend
- Indigenous status — Aboriginal and Torres Strait Islander offenders are generally more likely to reoffend and to be reconvicted or reimprisoned upon release from prison.

Payne (2007) also found that situational factors potentially influencing the likelihood of repeat offending can include:

- unemployment (section 4.6)
- education and schooling — those with lower educational attainment (sections 4.5 and 4.7)
- residential location — those living in low socioeconomic areas or who are homeless (section 4.9 and chapter 10)
- family attachment — those with limited family attachment
- poor mental health (section 8.7)
- drug use (section 11.2).

The true level of repeat offending is underestimated, as not all offences are necessarily detected or recorded by police, and court convictions do not necessarily result in contact with corrective services (Richards 2011; Wartna 2009; Payne 2007). Repeat offending can also be overestimated as an offender on remand will not necessarily be convicted and sentenced for a particular offence (Payne 2007).

---

## Adult re-imprisonment

In the absence of actual re-offending data, studies use criminal justice data and define repeat offending as re-apprehension, re-conviction or re-imprisonment. Re-imprisonment is the most serious outcome of the criminal justice process and research has found that the strongest predictor of re-imprisonment was prior imprisonment (Wundersitz 2010).

Nationally, 77.0 per cent of Aboriginal and Torres Strait Islander prisoners on 30 June 2013 had a known prior imprisonment, with this proportion remaining relatively unchanged over the past 13 years (table 11A.4.1). The proportion of non-Indigenous prisoners with known prior imprisonment was 50.9 per cent, also relatively unchanged over time (table 11A.4.1).

---

**Figure 11.4.1 Proportion of prisoners with known prior adult imprisonment under sentence, by sex, 30 June 2013<sup>a</sup>**

<sup>a</sup> In the NT, there were no non-Indigenous female prisoners with known prior adult imprisonment at 30 June 2013.

Source: ABS (2013) *Prisoners in Australia*, 2013, Cat. no. 4517.0; table 11A.4.2.

---

Nationally, 77.9 per cent of Aboriginal and Torres Strait Islander male prisoners had experienced prior adult imprisonment, compared with 67.8 per cent of Aboriginal and Torres Strait Islander female prisoners (figure 11.4.1). The proportion was higher for Aboriginal and Torres Strait Islander male prisoners compared with non-Indigenous male prisoners (except in the ACT) and Aboriginal and Torres Strait Islander female prisoners compared with non-Indigenous female prisoners (except in Tasmania) (figure 11.4.1).

---

## Youth returns to sentenced supervision

The AIHW used national data from the 2011-12 Juvenile Justice National Minimum Dataset to measure the proportion of young people who return to sentenced supervision over three timeframes:

- within 1 year of a sentenced supervision order, Aboriginal and Torres Strait Islander young people in 2010-11 returned at 1.3 times the rate of non-Indigenous young people (51 per cent compared with 40 per cent)
- within 2 years of a sentenced supervision order, Aboriginal and Torres Strait Islander young people in 2009-10 returned at 1.3 times the rate of non-Indigenous young people (72 per cent compared with 58 per cent)
- during the entire time for which a young person is eligible to return to youth justice supervision, Aboriginal and Torres Strait Islander young people returned at 1.5 times the rate of non-Indigenous young people (63 per cent compared with 43 per cent) (AIHW 2013).

Jurisdictional cohort studies measuring longitudinal outcomes of youth offending patterns have been published in previous OID reports.

## Offenders proceeded against more than once by police

An offender can be proceeded against by police multiple times during a given period.

Comparable data are available for NSW, Queensland, SA and the NT. For these jurisdictions in 2012-13, 40 to 47 per cent of Aboriginal and Torres Strait Islander offenders were proceeded against by police on more than one occasion, compared with 18 to 28 per cent of non-Indigenous offenders during the reference period (table 11A.4.3).

In 2012-13, Aboriginal and Torres Strait Islander offenders were younger than non-Indigenous offenders for both males and females in NSW, Queensland, SA and for males in the NT (table 11A.4.4).

## Things that work

The Standing Committee on Social Issues (2008) found that a major factor leading to recidivism was the lack of suitable support available to ex-offenders attempting to integrate themselves into society. Services that aim to support Aboriginal and Torres Strait Islander offenders who have experienced imprisonment can enhance rehabilitative outcomes and the reintegration process, by helping offenders remain in contact and involved with the community. These services can include: visits by elders, contact with community liaison officers, official Aboriginal and Torres Strait Islander visitors and access to chaplains (including specified Aboriginal and Torres Strait Islander chaplains) (Willis and Moore 2008).

---

Diversion programs are another means of reducing reoffending. Payne, Kwiatkowski and Wundersitz (2008) studied the outcomes of police drug diversion programs in various jurisdictions and found them to be effective in reducing recidivism, including for entrenched offenders. Box 11.4.3 describes an example of a diversion program, supported by police, magistrates and drug courts, that has shown reductions in recidivism.

#### **Box 11.4.3 Things that work — repeat offending**

In NSW, the **Magistrates Early Referral into Treatment (MERIT)** drug diversion program provides adult defendants in local courts with the option of undertaking formal drug treatment while on bail. The program is available in 65 local courts across NSW covering around 80 per cent of defendants. Participation in the program is voluntary. In 2009, approximately 19 per cent of MERIT participants were Aboriginal and/or Torres Strait Islander (Howard and Martire 2012).

MERIT is a tailored, case management program that diverts defendants with demonstrable drug problems to an intensive three-month drug treatment program, and occurs prior to sentencing. Lulham (2009) compared a cohort of 2396 defendants who participated in the MERIT program in the two years to 30 June 2005 (18 per cent Indigenous) with a comparison group of defendants (15 per cent Indigenous) and found that completion of the program reduced reoffending by 12 per cent over a two-year follow-up period. No comparable decline was noted among those who failed to complete the program.

Whilst an audit by the NSW Auditor-General in 2007-08 agreed that the MERIT program was suitable for Aboriginal and Torres Strait Islander defendants, it found that they faced issues with access to, and completion of, the MERIT program. An Aboriginal Practice Checklist to improve access was developed and trialled by seven MERIT teams in 2006. Whilst completion rates for Aboriginal and Torres Strait Islander defendants in these areas increased from 55 to 73 per cent, the Checklist has not been implemented by all MERIT teams (Public Accounts Committee 2010).

## **Future directions in data**

There is no systematic national definition or data collection which provides information about the prevalence of prior detention among juvenile detainees. The Australasian Juvenile Justice Administrators is overseeing several research projects to develop national youth justice policy, research and data capabilities. Current priorities include a recidivism data collection project (SCRGSP 2014).

## 11.5 Community functioning<sup>6</sup>

### Box 11.5.1 Key messages

- Community functioning is defined as the ability and freedom of community members and communities to determine the context of their lives and to translate their capabilities into positive actions towards a valued life.
- Community functioning scores provide a national quantitative measure of functioning, drawing on Aboriginal and Torres Strait Islander perspectives. In 2008, results showed that, for children aged 0–14 years and for those aged 15 years and over, median community functioning scores were similar across sex and geographic location, reflecting consistent experiences of community functioning.

### Box 11.5.2 Measures of community functioning

There are two main measures for this indicator:

- *A summary of findings for each community functioning theme*
  - Connectedness to country, land and history; culture and identity
  - Resilience
  - Leadership
  - Having a role, structure and routine
  - Feeling safe
  - Vitality.
- *Median community functioning scores* are defined as the midpoint of the distribution of weighted scores for each data item under each community functioning theme, for children aged 0–14 years and people aged 15 years or over, with a higher median score indicating stronger community functioning.

Findings are sourced from the *Aboriginal and Torres Strait Islander Health Performance Framework* (ATSIHPF) 2012. The ATSIHPF indicator contains multiple measures of family and community life, drawing on data from the ABS National Aboriginal and Torres Strait Islander Social Survey (NATSISS). Data are collected every six years with the most recent data available for 2008 (all jurisdictions; sex; age; remoteness). Time series are not included in this report as some data were not previously available (see future directions in data).

Community functioning is defined as the ability and freedom of community members and communities to determine the context of their lives (social, cultural, spiritual and organisational) and to translate their knowledge, skills, and understanding (capabilities) into positive actions towards a valued life (AIHW 2013). The conversion of capabilities into functioning is influenced by the values and personal characteristics of the individuals,

---

<sup>6</sup> The Steering Committee notes its appreciation to Dr Kyllie Cripps, University of NSW, who reviewed a draft of this section of the report.

---

families and communities, and by the environment in which they live. Different cultures will give greater or lesser priority to different aspects of functioning (AHMAC 2012).

### **Summary of findings for each community functioning theme**

Workshops led by Aboriginal facilitators on behalf of the work program for the ATSIHPPF developed the concept and measures with Aboriginal and Torres Strait Islander Australians in 2008 and 2010. Participants identified a number of key themes and weighted these functionings according to their relative value. Whilst the measure covers multiple constructs, these combine to build an overall picture of community functioning for Aboriginal and Torres Strait Islander Australians.

Table 11.5.1 provides a brief description of each theme; its weight as a percentage out of 100; and references to relevant data available in other sections of this report (or a summary of relevant data from the 2008 NATSISS).

**Table 11.5.1 Summary of findings for community functioning capabilities**

<i>Measure of functioning</i>	<i>Weight (per cent)</i>
<b>Descriptor</b>	<b>Findings or relevant OID sections</b>

## Median community functioning scores

The ATSIHPF (AHMAC 2012) reports the distribution of the calculated community functioning scores (this is one element of ATSIHPF's multi-measure analysis). Median

---

scores are included in this report to show the middle of a distribution. The greater the score, the higher the level of community functioning.

The scores for Aboriginal and Torres Strait Islander children aged 0–14 years (ranging from 0 to 40) are not directly comparable to scores for those aged 15 years or over (ranging from 0 to 70), due to differences in the items used to create the scores, which in turn affect the results.

The median level of community functioning was not affected by age, sex or remoteness. The small variation in median scores is unlikely to be statistically significant.

- Among Aboriginal and Torres Strait Islander Australians aged 15 years or over, the median score ranged from 42 to 45 (table 11A.5.1). The median score was 44 for males and 43 for females. The median score ranged from 43 in regional areas to 45 in very remote areas and ranged from 42 in NSW to 49 in the ACT) (table 11A.5.2).
- Among Aboriginal and Torres Strait Islander children aged 0–14 years, the median score was 20 for boys and 21 for girls. The median score ranged from 20 in non-remote areas to 23 in remote areas, and ranged from 19 in Victoria and Tasmania to 23 in the NT (table 11A.5.2).

## Things that work

Several programs aim to improve general community functioning. Box 11.5.3 provides an example of a ‘cultural healing’ program that has been found to increase the capacity of participants to exert greater control over their health and wellbeing.

### Box 11.5.3 Things that work — community functioning

The **Family Wellbeing Program** was developed by Adelaide-based Aboriginal and Torres Strait Islander Australians and has been integrated into health and human service provision in northern Australia, including into community health promotion, school curricula, welfare reform wellbeing centres and primary health care programs in several states and the Northern Territory. It is a cultural healing program that aims to enhance the capacity of participants to deal with the day-to-day stresses of life and to help others. It uses a group format, in which the experiences of the facilitators and participants are the main learning resource. The program consists of four stages, each lasting 10 weeks. Participants attend one 3-hour session each week (Tsey et al. 2009 cited in CTGCH 2013). The program has been nationally accredited to provide participants with formal qualifications in counselling (Tsey and Every 2000).

(continued next page)

---

### Box 11.5.3 (continued)

A synthesis of seven formative evaluations of the program, which involved a total of 148 adult and 70 student participants, concluded that it increased the capacity of participants to exert greater control over their health and wellbeing (Tsey et al. 2010 cited in CTGCH 2013). (However, there was no evidence presented of positive changes occurring at the broader, community level.)

Source: Tsey, K. and Every, A. 2000, *Evaluating Aboriginal empowerment programs: the case of Family WellBeing*, Department of Social Preventative Medicine, University of Queensland and Institute for Aboriginal Development, Alice Springs, Northern Territory, Australian and New Zealand Journal of Public Health, 24(5):509–14; CTGCH (Closing the Gap Clearinghouse) 2013), *Strategies and practices for promoting the social and emotional wellbeing of Aboriginal and Torres Strait Islander people*, Resource sheet no. 19, produced for the Closing the Gap Clearinghouse February 2013, Australian Institute of Health and Welfare and the Australian Institute of Family Studies.

## Future directions in data

Data required to inform the measures for this indicator are only available every six years, with the next available data from the 2014-15 NATSISS anticipated for release in early 2016. Following publication of the 2014-15 data, an assessment of the utility of these measures for time series reporting will be required. Limited data were available for the key theme of leadership though it is anticipated that this measure will continue to develop as new data become available.

(a) The 2009 NHMRC guidelines advise that on a single occasion of drinking, the risk of alcohol-related injury increases with the amount consumed. For healthy men and women, 'drinking no more than four standard drinks on a single occasion reduces the risk of alcohol-related injury arising from that occasion'. A single occasion of drinking refers to a person consuming a sequence of drinks without their blood alcohol concentration reaching zero in-between. The 2009 National Health and Medical Research Council (NHMRC) guidelines for reducing health risks associated with the consumption of alcohol state that, for healthy men and women, 'drinking no more than two standard drinks on any day reduces the lifetime risk of harm from alcohol-related disease or injury'.

(b) Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use.

(c) No alcohol consumed in previous 12 months (including never consumed alcohol).

(d) Based on responses to questions in 2012-13 AATSIHS about frequency of consumption of specified number of drinks in previous year. The number of drinks was based on the NHMRC guidelines for exceeding single occasion risk guidelines for alcohol consumption for males and females.

(e) Persons who exceeded single occasion risk guidelines less than once a week in the previous 12 months.

TABLE 11A.1.1

Table 11A.1.1      **Alcohol risk levels, Indigenous persons aged 18 years and over (crude rates), 2012-13 (a), (b)**

TABLE 11A.1.4

Table 11A.1.4      **95 per cent confidence intervals of alcohol risk levels, Indigenous persons aged 18 years and over, by remoteness (crude rates) 2012-13 (a), (b)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
(a) The 2009 NHMRC guidelines advise that on a single occasion of drinking, the risk of alcohol-related injury increases with the amount consumed. For healthy men and women, 'drinking no more than four standard drinks on a single occasion reduces the risk of alcohol-related injury arising from that occasion'. A single occasion of drinking refers to a person consuming a sequence of drinks without their blood alcohol concentration reaching zero in-between. The 2009 National Health and Medical Research Council (NHMRC) guidelines for reducing health risks associated with the consumption of alcohol state that, for healthy men and women, 'drinking no more than two standard drinks on any day reduces the lifetime risk of harm from alcohol-related disease or injury'.										
(b) Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use.										
(c) No alcohol consumed in previous 12 months (including never consumed alcohol).										
(d) Based on responses to questions in 2012-13 AATSIHS about frequency of consumption of specified number of drinks in previous year. The number of drinks was based on the NHMRC guidelines for exceeding single occasion risk guidelines for alcohol consumption for males and females.										
(e) Lifetime risk has been operationalised for data collection purposes as: for both males and females, an average of more than 2 standard drinks per day in the last week, that is total alcohol consumption divided by the number of days to determine average per day. Note consumption based on week before the interview, does not take into account whether consumption in that week was more, less or the same as usual.

TABLE 11A.1.8

Table 11A.1.8      **Alcohol risk levels by Indigenous status, persons aged 18 years and over, age standardised rates, by remoteness, 2011-13 (a), (b)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
(a)	The 2009 NHMRC guidelines advise that on a single occasion of drinking, the risk of alcohol-related injury increases with the amount consumed. For healthy men and women, 'drinking no more than four standard drinks on a single occasion reduces the risk of alcohol-related injury arising from that occasion'. A single occasion of drinking refers to a person consuming a sequence of drinks without their blood alcohol concentration reaching zero in-between. The 2009 National Health and Medical Research Council (NHMRC) guidelines for reducing health risks associated with the consumption of alcohol state that, for healthy men and women, 'drinking no more than two standard drinks on any day reduces the lifetime risk of harm from alcohol-related disease or injury'.									
(b)	Estimates with relative standard errors (RSEs) between 25 per cent and 50 per cent should be used with caution. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use.									
(c)	No alcohol consumed in previous 12 months (including never consumed alcohol).									
(d)	Based on responses to questions in 2012-13 AATSIHS about frequency of consumption of specified number of drinks in previous year. The number of drinks was based on the NHMRC guidelines for exceeding single occasion risk guidelines for alcohol consumption for males and females.									
(e)	Lifetime risk has been operationalised for data collection purposes as: for both males and females, an average of more than 2 standard drinks per day in the last week, that is total alcohol consumption divided by the number of days to determine average per day. Note consumption based on week before the interview, does not take into account whether consumption in that week was more, less or the same as usual.

Regional/Remote (e)	±	2.5	3.4	2.4	4.6	3.9	2.0	na	11.7	1.4

(a) The 2009 National Health and Medical Research Council (NHMRC) guidelines for reducing health risks associated with the consumption of alcohol state that, for healthy men and women, 'drinking no more than two standard drinks on any day reduces the lifetime risk of harm from alcohol-related disease or injury'.

(b) Some Remoteness Areas do not apply to all States and Territories.

(c) Data for Indigenous people are from the NATSIHS.

(d) No alcohol consumed in previous 12 months (including never consumed alcohol).

(e) Regional/Remote includes Inner Regional, Outer Regional, Remote and Very Remote.

(f) Lifetime risk has been operationalised for data collection purposes as: for both males and females, an average of more than 2 standard drinks per day in the last week, that is total alcohol consumption divided by the number of days to determine average per day. Note consumption based on week before the interview, does not take into account whether consumption in that week was more, less or the same as usual.

(g) Proportions based on total population which includes alcohol risk level 'not stated'.

TABLE 11A.1.21

Table 11A.1.21     **95 per cent confidence interval of alcohol risk levels (2009 guidelines) by Indigenous status, persons aged 18 years and over, age standardised rates, by remoteness, 2004-05 (a), (b)**

TABLE 11A.1.24

Table 11A.1.24     **Hospital separations related to alcohol use, by remoteness areas, 2012-13 (a), (b)**

	<i>Major cities</i>	<i>Inner and Outer regional</i>	<i>Remote and very remote</i>
(a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). ICD-10-AM (fifth edition) codes F10, K70, K75 and T51 based on principal diagnosis. External cause codes X45, X65 and Y15 based on any external cause reported. Overlapping may exist between separations by toxic effect of alcohol and separations based on external causes X45, X65, or Y15.			
(b) Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area in the jurisdiction.			
(c) Rates per 100 000 population are calculated using ABS Estimated 2012 Resident Population by remoteness classification from the 2011 Census (as at 30 June 2011). Rates were directly age standardised to the 2001 Australian population.			
(d) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.			

Source: AIHW National Hospital Morbidity Database (unpublished).

(a) Causes of death attributable to alcohol are based on codes of the International Statistical Classification of Diseases and Related Health Problems, 10th Revision (ICD-10). Causes of death attributable to alcohol-induced mortality include ICD-10 codes: E24.4, Alcohol-induced pseudo-Cushing's syndrome; F10, Mental and behavioural disorders due to alcohol use; G31.2, Degeneration of nervous system due to alcohol; G62.1, Alcoholic polyneuropathy; G72.1, Alcoholic myopathy; I42.6, Alcoholic cardiomyopathy; K29.2, Alcoholic gastritis; K70, Alcoholic liver disease; K86.0, Alcohol-induced chronic pancreatitis; R78.0, Finding of alcohol in blood; X45, Accidental poisoning by and exposure to alcohol; X65, Intentional self-poisoning by and exposure to alcohol; and Y15, Poisoning by and exposure to alcohol, undetermined intent. Alcohol-induced causes exclude accidents, homicides, and other causes indirectly related to alcohol use. This category also excludes newborn deaths associated with maternal alcohol use.

(b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised), 2012 (preliminary). See Explanatory Notes 29-33 and Technical Notes, Causes of Death Revisions, 2006 in Causes of Death, Australia, 2010 (cat. 3303.0) and Causes of Death Revisions, 2010 and 2011 in Causes of Death, Australia, 2012 (cat. 3303.0).

(c) Data based on reference year. See data quality statements for a more detailed explanation.

(d) Data are presented in five-year groupings due to the volatility of small numbers each year.

(e) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.

TABLE 11A.1.26

Table 11A.1.26 **Alcohol induced deaths (rate per 100 000), age standardised, by sex, NSW, Queensland, WA, SA and the NT, 2008–2012 (a), (b), (c), (d), (e), (f), (g), (h)**

(f)	Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.											
(g)	Denominators used in the calculation of rates for the Indigenous population are Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians (ABS Cat. no. 3238.0). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.											
(h)	Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These five states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.											
(i)	Data on deaths of Indigenous people are affected by differing levels of coverage of deaths identified as Indigenous across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.											
(j)	Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. See data quality statements for a more detailed explanation.											
(k)	Aboriginal and Torres Strait Islander data for Western Australia were not published in Causes of Death, Australia, 2010 (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in Causes of Death, Australia, 2010 (cat. no. 3303.0). This adjusted data has been included in this table.											
(l)	Total includes data for NSW, Queensland, WA, SA and the NT only. These five states and territories have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.

- (a) Causes of death attributable to alcohol are based on codes of the International Statistical Classification of Diseases and Related Health Problems, 10th Revision (ICD-10). Causes of death attributable to alcohol-induced mortality include ICD-10 codes: E24.4, Alcohol-induced pseudo-Cushing's syndrome; F10, Mental and behavioural disorders due to alcohol use; G31.2, Degeneration of nervous system due to alcohol; G62.1, Alcoholic polyneuropathy; G72.1, Alcoholic myopathy; I42.6, Alcoholic cardiomyopathy; K29.2, Alcoholic gastritis; K70, Alcoholic liver disease; K86.0, Alcohol-induced chronic pancreatitis; R78.0, Finding of alcohol in blood; X45, Accidental poisoning by and exposure to alcohol; X65, Intentional self-poisoning by and exposure to alcohol; and Y15, Poisoning by and exposure to alcohol, undetermined intent. Alcohol-induced causes exclude accidents, homicides, and other causes indirectly related to alcohol use. This category also excludes newborn deaths associated with maternal alcohol use.
- (b) Causes of death data for 2006-2007 have undergone two years of revisions and are now final. See ABS *Causes of Death, Australia, 2012*, Cat. no. 3303.0, Technical Note: Causes of Death Revisions, and Explanatory Notes 28–32.
- (c) Data based on reference year. See data quality statements for a more detailed explanation.
- (d) Data are presented in five-year groupings due to the volatility of small numbers each year.
- (e) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.
- (f) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.

(a) Homicide includes murder and manslaughter, but excludes driving causing death. Data reflects information available at the time of reporting and is subject to change.

(b) Where an offender has been identified. Excludes data where Indigenous status of victim or offender, or alcohol involvement is unknown. In the case of multiple offenders, table includes the primary victim and offender only (based on AIC NHMP incident classification).

(c) Indigenous homicides are where both victims and offenders of homicide are either Indigenous and/or Torres Strait Islanders.

(d) Non-Indigenous homicides are where both victims and offenders are not Indigenous. Includes victims and offenders who are Caucasian, Asian and Maori/Pacific Islanders.

(e) Inter-racial homicides are where either the victim or the offender is Indigenous. Includes homicides involving: an Indigenous offender and non-Indigenous victim, and non-Indigenous offender and an Indigenous victim.

– Nil or rounded to zero.

(a) Estimates with a relative standard error of 25 per cent to 50 per cent should be used with caution.

(b) The substance use questions in the 2012-13 NATSIHS are comparable to those used in the 2008 NATSISS, the 2004-05 NATSIHS and the 2002 NATSISS. However, when comparing non-remote data in 2002, 2004-05, 2008 and 2012-13 it should be noted that there were differences in the proportion of people who did not accept the substance use form (7 per cent non-response in the 2002 NATSISS compared with 20 per cent in the 2004-05 NATSIHS, 9 per cent for the 2008 NATSISS and 4 per cent in the 2012-13 NATSIHS).

(c) Includes kava, heroin, cocaine, petrol, LSD/synthetic hallucinogens, naturally occurring hallucinogens, ecstasy/designer drugs, and other inhalants. Includes methadone in 2004-05, 2008 and 2012-13.

(d) This category comprises people who accepted the substance use form but did not state if they had ever used substances.

(e) Includes people who accepted the substance use form. Includes people for whom substance use was not known.

– Nil or rounded to zero.

Used substances but not in last 12 months (g)	±	3.8	3.7	4.1	5.3	6.4
Never used substances (g)	±	6.7	4.6	5.4	6.4	6.9
<b>Total</b>	±	—	—	—	—	—

**RSE** = Relative standard error. **CI** = Confidence interval.

(a) Estimates with a relative standard error of 25 per cent to 50 per cent should be used with caution.

TABLE 11A.2.3

**Table 11A.2.3      Substance use for Indigenous people (aged 18 years and over) in non-remote areas, by age, 2002, 2004-05, 2008 and 2012-13 (a), (b)**

	<i>Unit</i>	<i>18-24</i>	<i>25-34</i>	<i>35-44</i>	<i>45-54</i>	<i>55 or over</i>
(b) The substance use questions in the 2012-13 NATSIHS are comparable to those used in the 2008 NATSISS, the 2004-05 NATSIHS and the 2002 NATSISS. However, when comparing non-remote data in 2002, 2004-05, 2008 and 2012-13 it should be noted that there were differences in the proportion of people who did not accept the substance use form (7 per cent non-response in the 2002 NATSISS compared with 20 per cent in the 2004-05 NATSIHS, 9 per cent for the 2008 NATSISS and 4 per cent in the 2012-13 NATSIHS).						
(c) Includes kava, heroin, cocaine, petrol, LSD/synthetic hallucinogens, naturally occurring hallucinogens, ecstasy/designer drugs, and other inhalants. Includes methadone in 2004-05, 2008 and 2012-13.						
(d) This category comprises people who accepted the substance use form but did not state if they had ever used substances.						
(e) People who accepted the substance use form.						
(f) Includes people for whom substance use was not known.						
(g) Difference between person rate in 2002 and 2008 is statistically significant.						
– Nil or rounded to zero.

Other	2.4	2.6	0.8
	<i>Rate ratio (f)</i>		
Poisoning	3.2	1.8	1.6
Accidental poisoning	3.8	2.0	1.9
Mental/behavioural disorders	3.9	3.5	2.9
Other	5.6	3.0	2.2

- (a) Categories are based on ICD-10-AM classification of diseases (International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification). ICD-10-AM codes for poisoning, mental/behavioural disorders and other conditions are based on Principal diagnoses. External cause codes for accidental poisoning are based on any external cause reported. This may lead to overlap between 'accidental poisoning' and the other categories.
- (b) Directly age-standardised using the Australian 2001 standard population. Disaggregation by remoteness area is based on the ABS' 2011 Australian Statistical Geography Standard (ASGS) and relates to the patient's usual residence, not the location of hospital. Hence, rates represent the number of separations for patients living in each remoteness area divided by the total number of people living in that remoteness area.
- (c) Data are for public and private hospitals in all jurisdictions.
- (d) 'Non-Indigenous' includes hospitalisations of non-Indigenous people and for WA only also those for whom Indigenous status was not stated.

TABLE 11A.2.6

Table 11A.2.6      **Main types of hospital separations related to drug use, by remoteness, 2012-13 (a), (b), (c)**

	<i>Major cities</i>	<i>Inner and Outer Regional</i>	<i>Remote and Very Remote</i>
(e) Rates per 100 000 population are calculated using ABS Estimated 2012 Resident Population by remoteness classification from the 2011 Census (as at 30 June 2011). Rates were directly age standardised to the 2001 Australian population.			
(f) Rate ratio is the age standardised Indigenous hospitalisation rate divided by the non-Indigenous Australians' hospitalisation rate.			

Source: AIHW National Hospital Morbidity Database (unpublished).

- (a) Causes of death attributable to drug-induced mortality (as per Appendix 3 of ABS *Causes of Death, 2006*, Cat no. 3303.0) are based on codes of the International Statistical Classification of Diseases and Related Health Problems, 10th Revision (ICD-10).
- (b) All causes of death data from 2006 onward are subject to a revisions process - once data for a reference year are 'final', they are no longer revised. Affected data in this table are: 2008-2010 (final), 2011 (revised), 2012 (preliminary). See Explanatory Notes 29-33 and Technical Notes, Causes of Death Revisions, 2006 in *Causes of Death, Australia, 2010* (cat. 3303.0) and Causes of Death Revisions, 2010 and 2011 in *Causes of Death, Australia, 2012* (cat. 3303.0).
- (c) Data based on reference year. See data quality statements for a more detailed explanation.
- (d) Data are presented in five-year groupings due to the volatility of small numbers each year.
- (e) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.
- (f) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.
- (g) Denominators used in the calculation of rates for the Indigenous population are *Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians* (ABS Cat. no. 3238.0). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.

TABLE 11A.2.8

Table 11A.2.8      **Drug-induced deaths (rate per 100 000 population), age standardised, by sex, NSW, Queensland, WA, SA and the NT, 2008–2012 (a), (b), (c), (d), (e), (f), (g), (h)**

	<i>Indigenous (i)</i>						<i>Non-Indigenous</i>					
	<i>NSW</i>	<i>Qld (j)</i>	<i>WA (k)</i>	<i>SA</i>	<i>NT</i>	<i>Total (l)</i>	<i>NSW</i>	<i>Qld (j)</i>	<i>WA (k)</i>	<i>SA</i>	<i>NT</i>	<i>Total (l)</i>
(h)	Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These five states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.											
(i)	Data on deaths of Indigenous people are affected by differing levels of coverage of deaths identified as Indigenous across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.											
(j)	Care should be taken when interpreting deaths data for Queensland as they are affected by recent changes in the timeliness of birth and death registrations. Queensland deaths data for 2010 have been adjusted to minimise the impact of late registration of deaths on mortality indicators. See data quality statements for a more detailed explanation.											
(k)	Aboriginal and Torres Strait Islander data for Western Australia were not published in <i>Causes of Death, Australia, 2010</i> (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in <i>Causes of Death, Australia, 2010</i> (cat. no. 3303.0). This adjusted data has been included in this table.											
(l)	Total includes data for NSW, Queensland, WA, SA and the NT only. These five states and territories have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.											
	<b>np</b> Not published.											

Source: ABS (unpublished) Causes of Death, Australia, Cat. no. 3303.0.

- (a) Causes of death attributable to drug-induced mortality (as per Appendix 3 of ABS *Causes of Death, 2006*, Cat no. 3303.0) are based on codes of the International Statistical Classification of Diseases and Related Health Problems, 10th Revision (ICD-10).
- (b) Causes of death data for 2006–2007 have undergone two years of revisions and are now final. See ABS *Causes of Death, Australia, 2012*, Cat. no. 3303.0, Technical Note: Causes of Death Revisions, and Explanatory Notes 28–32.
- (c) Data based on reference year. See data quality statements for a more detailed explanation.
- (d) Data are presented in five-year groupings due to the volatility of small numbers each year.
- (e) Deaths where the Indigenous status of the deceased was not stated are excluded from analysis.
- (f) Age standardised death rates enable the comparison of death rates between populations with different age structures by relating them to a standard population. The current ABS standard population is all persons in the Australian population at 30 June 2001. Standardised death rates (SDRs) are expressed per 100 000 persons. SDRs in this table have been calculated using the indirect method, age standardised by five year age group to 75 years and over. Rates calculated using the indirect method are not comparable to rates calculated using the direct method.
- (g) Denominators used in the calculation of rates for the Indigenous population are *Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians* (ABS Cat. no. 3238.0). There are no comparable population data for the non-Indigenous population. Denominators used in the calculation of rates for comparison with the Indigenous population have been derived by subtracting Indigenous population estimates/projections from total estimated resident population and should be used with care, as these data include population units for which Indigenous status were not stated.
- (h) Data are reported individually by jurisdiction of residence for NSW, Queensland, WA, SA and the NT only. These five states have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.

TABLE 11A.2.9

Table 11A.2.9      **Drug-induced deaths (rate per 100 000 population), age standardised, by sex, NSW, Queensland, WA, SA and the NT, 2003–2007(a), (b), (c), (d), (e), (f), (g), (h)**

	<i>Indigenous (i)</i>						<i>Non-Indigenous</i>					
	<i>NSW</i>	<i>Qld</i>	<i>WA (j)</i>	<i>SA</i>	<i>NT</i>	<i>Total (k)</i>	<i>NSW</i>	<i>Qld</i>	<i>WA (j)</i>	<i>SA</i>	<i>NT</i>	<i>Total (k)</i>
(i)	Data on deaths of Indigenous people are affected by differing levels of coverage of deaths identified as Indigenous across states and territories. Care should be exercised in analysing these data, particularly in making comparisons across states and territories and between the Indigenous and non-Indigenous data.											
(j)	Aboriginal and Torres Strait Islander data for Western Australia were not published in <i>Causes of Death, Australia, 2010</i> (cat. no. 3303.0) due to investigations being undertaken regarding the volatility of this data. Subsequently, Aboriginal and Torres Strait Islander deaths data in WA for the years 2007, 2008 and 2009 were adjusted to correct for potential over-reporting in this period. This data was released on 22 June, 2012 in <i>Causes of Death, Australia, 2010</i> (cat. no. 3303.0). This adjusted data has been included in this table.											
(k)	Total includes data for NSW, Queensland, WA, SA and the NT only. These five states and territories have been included due to there being evidence of sufficient levels of identification and sufficient numbers of deaths to support mortality analysis.											

**np** Not published.

(a) Homicide includes murder and manslaughter, but excludes driving causing death. Data reflects information available at the time of reporting and is subject to change.

(b) Where an offender has been identified. Excludes cases where Indigenous status of victim or offender, or drug involvement is unknown. In the case of multiple offenders, table includes the primary victim and offender only (based on AIC NHMP incident classification).

(c) Indigenous homicides are where both victims and offenders of homicide are either Indigenous and/or Torres Strait Islanders.

(d) Non-Indigenous homicides are where both victims and offenders are not Indigenous. Includes victims and offenders who are Caucasian, Asian and Maori/Pacific Islanders.

(e) Inter-racial homicides are where either the victim or the offender is Indigenous. Includes homicides involving: an Indigenous offender and non-Indigenous victim, and non-Indigenous offender and an Indigenous victim.

– Nil or rounded to zero.

- (a) This table represents persons of interest (POIs) or alleged offenders who have come to the attention of NSW Police for a recorded criminal incident (driving offences are excluded). Some POIs are formally proceeded against to court and some are proceeded against other than to court whilst others are not proceeded against. The POIs included in the table above have all been proceeded against. POIs are not a count of unique offenders. Where an individual is involved in multiple criminal incidents throughout the year they will appear as a POI multiple times.
- (b) Under the *Young Offenders Act 1997* (NSW), when police apprehend a young person they must first consider whether the young person is entitled to be diverted under the Act by way of warning, caution or youth justice conference.
- (c) Driving offences have been excluded.
- (d) Data on warnings is only available from January 2010 onwards due to changes in how warnings are recorded.  
– Nil or rounded to zero.

- (a) This table represents persons of interest (POIs) or alleged offenders who have come to the attention of NSW Police for a recorded criminal incident (driving offences are excluded). Some POIs are formally proceeded against to court and some are proceeded against other than to court whilst others are not proceeded against. The POIs included in the table above have all been proceeded against. POIs are not a count of unique offenders. Where an individual is involved in multiple criminal incidents throughout the year they will appear as a POI multiple times.
- (b) Under the *Young Offenders Act 1997* (NSW), when police apprehend a young person they must first consider whether the young person is entitled to be diverted under the Act by way of warning, caution or youth justice conference.
- (c) Unknown Indigenous status have been excluded. Excluded from this table were 1 554 juvenile POIs whose status was recorded by NSW Police as 'legal process—not further classified'.
- (d) Driving offences have been excluded.  
– Nil or rounded to zero.

**Indig** = Indigenous. **Non-Indig** = Non-Indigenous.

(a) Only those offenders whose age, sex and Indigenous status were identified are included.

(b) Indigenous status is based on self-identification by the juvenile.

(c) 'Other' signifies that the offender is known and sufficient evidence has been obtained but there is a bar to prosecution or other official process.

– Nil or rounded to zero.

(a) WA juvenile diversions include formal cautions and referrals to Juvenile Justice Teams (JJT) as a proportion of the total recorded number of juveniles diverted or arrested.

(b) Percentages are based on the proportion of young offenders cautioned when first processed by police in a financial year.

- (a) Prior to 1 July 2007 the recording of the racial identity of the alleged offender largely reflected the apprehending officer's opinion based on the physical appearance of the individual. From 1 July 2007, South Australia Police adopted the standard ABS question on Indigenous status for alleged offenders.
- (b) Juvenile diversions include both formal cautions and transfers to a family conference.
- (c) There are some counting rule differences between OCSAR and SAPOL data on juvenile diversions. Moreover, SAPOL's recently refreshed data would show slightly higher proportions of diversions each year, as offences occurring in one reporting period may not receive a family conference until the next reporting period.
- (d) Numbers of juvenile apprehensions exclude those offences with an unknown method of processing.

(a) Prior to 1 July 2007 the recording of the racial identity of the alleged offender largely reflected the apprehending officer's opinion based on the physical appearance of the individual. From 1 July 2007, South Australia Police adopted the standard ABS question on Indigenous status for alleged offenders.

TABLE 11A.3.29

Table 11A.3.29 **SA, proportion of offenders diverted via formal caution or transfer to family conference, by Indigenous status, by type of major offence and method of processing, 2009 (a), (b)**

	<i>Formal caution</i>	<i>Transfer to family conference</i>	<b><i>Offenders diverted</i></b>	<i>Transfer to Youth Court</i>	<i>Total</i>	<b><i>Total (c)</i></b>	<i>Type of offence as a proportion of total offences</i>
<i>Unit</i>	%	%	%	%	%	no.	no.

(b) There are some counting rule differences between OCSAR and SAPOL data on juvenile diversions. Moreover, SAPOL's recently refreshed data would show slightly higher proportions of diversions each year, as offences occurring in one reporting period may not receive a family conference until the next reporting period.

(c) The 'Total' includes those offenders with either a 'withdrawn' or 'unknown' outcome.

(d) Criminal trespass is now defined as Burglary, break and enter. For consistency, the figures used here are based on the same counting rules as previous years.

– Nil or rounded to zero.

(a) Data refers to apprehension cases rather than individual persons, therefore, there may be a number of cases that relate to one person.

(b) Indigenous data are based on self-identification by the juvenile.

(c) Where cases did not result in a diversion, these cases either proceeded to court or were resolved in some other manner (it is not an indicator of the number of matters referred to the courts).

TABLE 11A.3.32

Table 11A.3.32     **ACT, proportion of juvenile apprehensions diverted, by Indigenous status, by sex, 2012-13 (a), (b)**

	Proportion diverted (%)		Juvenile apprehensions (no.)	
	<i>Indigenous</i>	<i>Non-Indigenous</i>	<i>Indigenous</i>	<i>Non-Indigenous</i>
Males	25.2	34.4	103	532
Females	24.0	50.7	25	282
<b>Total</b>	<b>25.0</b>	<b>40.0</b>	<b>128</b>	<b>814</b>

(a) Data relates to number of juveniles apprehended in financial year 2012-13.

(b) In the ACT, the proportion of juvenile diversions has been calculated on total recorded police contacts with juveniles comprising juvenile cautions, referrals to diversionary conferencing, juveniles taken into protective custody and charges pertaining to juveniles.

(a) Prisoners who have had previous imprisonment in another State or Territory may not be counted as having prior imprisonment. Some states and territories may also include episodes on remand as prior imprisonment. See glossary of *Prisoners in Australia* (ABS Cat. no. 4517.0) for complete definition of prior imprisonment.

(b) Excludes breaches of periodic detention orders greater than 3 months.

(c) Prior to 2009, persons sentenced to full-time custody by the ACT were usually held in New South Wales prisons. A new prison facility to house ACT people sentenced to full-time custody, the Alexander Maconochie Centre, began taking prisoners on 30 March 2009. As at 30 June 2009, all ACT prisoners held in New South Wales prisons had been relocated to the new Alexander Maconochie Centre.

(d) Includes prisoners whose prior imprisonment status is unknown.

**na** Not available.

## 12 Outcomes for Torres Strait Islander people<sup>1</sup>

### Box 12.1 Key messages

- Available data suggest that, for many indicators, outcomes for Torres Strait Islander Australians are similar to those for Aboriginal Australians, including for: year 12 attainment (table 12A.1.1); post-secondary education attainment (table 12A.1.1); home ownership (table 12A.1.2); personal income (table 12A.1.3); and self-assessed health status (table 12A.1.5).
- Labour force participation rates for people aged 18–64 years in 2011–13 were higher for Torres Strait Islander Australians (70.5 per cent) than for Aboriginal Australians (61.7 per cent) although still lower than for non-Indigenous Australians (81.6 per cent) (although participation rates for Torres Strait Islander Australians living in mainland Queensland were not statistically different to those for non-Indigenous Australians) (figure 12.1). The unemployment rates for Torres Strait Islander Australians (19.8 per cent) and Aboriginal Australians (19.1 per cent) were similar, but both were higher than the rate for non-Indigenous Australians (3.8 per cent) (table 12A.1.4).

### 12.1 Selected outcomes for Torres Strait Islander people

The estimated Indigenous population of Australia at 30 June 2011 was 669 900, of whom 63 717 (9.5 per cent of the Indigenous population) identified as Torres Strait Islander people. This included people who identified as being of Torres Strait Islander origin (5.7 per cent of the Indigenous population) and people who identified as being both Aboriginal and Torres Strait Islander (3.8 per cent of the Indigenous population) (ABS 2013). From the 2011 Census, around 11 per cent of Torres Strait Islander people were reported as living in the Torres Strait, while the majority (62.6 per cent) lived in Queensland (ABS 2012).

This chapter presents a selection of results for Aboriginal Australians and Torres Strait Islander Australians from the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS) 2012–13, with non-Indigenous comparators from the ABS Australian Health Survey (AHS) 2011–12. AATSIHS and AHS data are presented together as covering the overall time period of 2011–13.

---

<sup>1</sup> The Steering Committee notes its appreciation to Reconciliation Australia, which reviewed a draft of this section of the report.

---

More extensive data from the 2008 National Aboriginal and Torres Strait Islander Social Survey and the 2006 Census were presented in the 2011 and 2009 reports respectively (SCRGSP 2009, 2011). Survey and Census data are not directly comparable.

There is great diversity in Torres Strait Islander communities, their languages and traditions. There is also regional variability across Torres Strait Islander communities, including differences between those living on the islands, within Australia and in remote versus urban communities. However, Torres Strait Islander people make up a very small proportion of the Australian population (0.29 per cent), making it difficult to report reliable data from sample surveys at a disaggregated level. In this chapter, data for 'Torres Strait Islander' Australians include both people who identified as 'Torres Strait Islander only' and people who identified as 'Both Aboriginal and Torres Strait Islander'. For comparison purposes, data for 'Aboriginal' Australians in this chapter have been limited to people who identified as 'Aboriginal only'.

Subject to suitable levels of data quality, data for this chapter are disaggregated into two geographical areas that reflect the distribution of Torres Strait Islander people across Australia: Queensland (including the Torres Strait Indigenous region); and the Balance of Australia (which comprises the remainder of Australia). These disaggregations are available in the attachment tables.

## **Year 12 or post-secondary education**

In 2011–13:

- there was no statistically significant difference in the proportions of Torres Strait Islander adults aged 18–64 years who had completed year 12 as their highest level of education (14.5 per cent) and Aboriginal Australians (11.0 per cent) and non-Indigenous Australians (14.8 per cent), although the rate for Aboriginal Australians was statistically significantly lower than the rate for non-Indigenous Australians (table 12A.1.1).
- there was no statistically significant difference in the proportions of Torres Strait Islander adults aged 18–64 years who had completed post-secondary qualifications at Certificate level III or above (32.5 per cent) and Aboriginal Australians (34.1 per cent), but both were significantly lower than the proportion of non-Indigenous Australians (58.1 per cent) (table 12A.1.1).

There was no change between 2004–05 and 2012–13 in the proportion of Torres Strait Islander adults aged 18 years and over who had completed year 12 as their highest level of education or the proportion who had completed post-secondary qualifications at Certificate level III or above (table 12A.1.1).

---

## Labour force status

Employment under the ABS definition includes CDEP participants on CDEP wages. Although some information is available about CDEP participation in remote areas, the disaggregation of data for Torres Strait Islander and Aboriginal people makes employment data disaggregated by CDEP status too unreliable for general use in this section. For further information on CDEP see section 4.6 in this report. Historical data by CDEP status for 2008 and 2004-05 are available in chapter 12 in the 2011 report (SCRGSP 2011).

---

Figure 12.1 **Labour force participation rates for Torres Strait Islander, Aboriginal and non-Indigenous Australians aged 18–64 years, 2011–13<sup>a,b</sup>**

<sup>a</sup> Error bars represent 95 per cent confidence intervals around each estimate. <sup>b</sup> The 2011–13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012–13 AATSIHS. Data for non-Indigenous Australians are from the 2011–13 AHS (for the period 2011–12).

Sources: ABS (unpublished) AATSIHS 2012–13 (core content); ABS (unpublished) AHS 2011–13 (core content); ABS (unpublished) NATSIHS 2004–05; ABS (unpublished) NHS 2004–05; table 12A.1.4.

---

In 2011–13, the labour force participation rate for all Torres Strait Islander Australians (70.5 per cent) was higher than that for Aboriginal Australians (61.7 per cent) but lower than that for non-Indigenous Australians (81.6 per cent), although there was no significant difference in the rate of Torres Strait Islander Australians in Queensland compared to the non-Indigenous population (figure 12.1).

There was no statistically significant difference in unemployment rates for Torres Strait Islander Australians (19.8 per cent) and Aboriginal Australians (19.1 per cent) but both were higher than for non-Indigenous Australians (3.8 per cent) (table 12A.1.4).

---

From 2004-05 to 2011-13, there was no change in labour force rates for Torres Strait Islander Australians and Aboriginal Australians. However, there was an increase in unemployment rates for Torres Strait Islander Australians (from 11.3 per cent in 2008 to 19.8 per cent in 2012-13) and Aboriginal Australians (from 12.7 per cent in 2004-05 to 19.1 per cent in 2012-13), though no change for non-Indigenous Australians (table 12A.1.4).

## **Income**

This section reports data based on individual weekly income of people aged 18 years and over. People are ranked from highest to lowest, with those with the lowest 20 per cent of incomes in quintile 1 (lowest quintile), ranging to those with the highest 20 per cent of incomes in quintile 5 (highest quintile).

In 2011-13, income distributions were similar for Torres Strait Islander adults and Aboriginal adults (lowest quintile — 24.3 and 27.1 per cent respectively; middle three quintiles — 64.5 and 64.6 per cent respectively; and highest quintile — 11.1 and 8.3 per cent respectively). The income distribution for non-Indigenous adults differed at the lowest and highest ends of the distribution (lowest quintile — 15.8 per cent; middle three quintiles — 62.9 per cent; and highest quintile — 21.3 per cent respectively) (table 12A.1.3).

**Figure 12.2 Proportion of Torres Strait Islander, Aboriginal and non-Indigenous Australians aged 18 years and over with individual weekly income in lowest quintile, 2004-05, 2008, 2011-13<sup>a, b</sup>**

<sup>a</sup> Error bars represent 95 per cent confidence intervals around each estimate. <sup>b</sup> The 2011-13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012-13 AATSIHS. Data for non-Indigenous Australians are from the 2011-13 AHS (for the period 2011-12).

*Sources:* ABS (unpublished) AATSIHS 2012-13 (NATSIHS content); ABS (unpublished) AHS 2011-12 (NHS content); ABS (unpublished) NATSISS 2008; ABS (unpublished) NHS 2007-08; ABS (unpublished) NATSIHS 2004-05; ABS (unpublished) NHS 2004-05; table 12A.1.3.

Income distributions for both Torres Strait Islander adults and Aboriginal adults changed from 2004-05 to 2012-13, with the proportion in the lowest income increasing over this time (figure 12.2).

## Home ownership

In 2011-13, the proportion of Torres Strait Islander adults living in a home owned with or without a mortgage (31.8 per cent in 2012-13) was similar to that for Aboriginal adults (30.0 per cent respectively in 2012-13) but was significantly lower than for non-Indigenous adults (71.8 per cent in 2011-12) (table 12A.1.2 and table 9A.3.2).

Between 2004-05 and 2011-13, home ownership rates did not change significantly for Torres Strait Islander adults (ranging between 30.6 and 32.6 per cent) but increased for Aboriginal adults (from 24.6 per cent to 30.0 per cent) (table 12A.1.2) and decreased for non-Indigenous adults (from 73.7 per cent to 71.8 per cent) (table 9A.3.2).

---

## Selected health characteristics

Data in this section are based on survey respondents self-assessed health status.

In 2011–13:

- the proportion of Torres Strait Islander adults reporting a long term health condition (84.3 per cent in 2012-13) was not statistically different to that of Aboriginal adults (87.3 per cent in 2012-13) or non-Indigenous adults (87.0 per cent in 2011-12), and for all groups there was no significant change from 2004-05 (table 12A.1.5).
- the proportion of Torres Strait Islander adults reporting high/very high levels of psychological distress (28.5 per cent in 2012-13) was not statistically different to that of Aboriginal people (29.5 per cent in 2012-13), but both rates were higher levels than that for non-Indigenous people (10.8 per cent in 2011-12) (table 12A.1.5).

## 12.2 Attachment tables

Attachment tables are identified in references throughout this chapter by an 'A' suffix (for example, table 12A.2 is table 2 in the attachment tables for chapter 12). The files containing the attachment tables can also be found on the Review web page ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)) or can be obtained by contacting the Secretariat directly.

# 13 Measuring multiple disadvantage<sup>1</sup>

## Box 13.1.1 Key messages

- This chapter presents information on the associations between different aspects of disadvantage. Where people who experience one type of disadvantage also tend to experience another kind of disadvantage, the two aspects of disadvantage may be linked or associated in some way.
- Section 13.1 presents descriptive statistics drawing on selected measures in this report, with a particular focus on measures of COAG targets and headline indicators.
  - Nationally in 2011–13, for both Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians, there were strong associations between lower educational attainment, low incomes, unemployment and income support and other indicators of socioeconomic disadvantage (figures 13.1.1–4).
  - Higher proportions of Aboriginal and Torres Strait Islander Australians than non-Indigenous Australians experienced multiple disadvantage (figures 13.1.1–3; tables 13A.1.7–8).
- Section 13.2 presents an overview of recent research into factors associated with the disadvantage experienced by many Aboriginal and Torres Strait Islander Australians.

Analysing the relationship between measures of disadvantage provides insight into the possible causes of disadvantage and helps identify those who might be in particular need of support, and where interventions may be targeted most effectively. Comparing the outcomes of Aboriginal and Torres Strait Islander Australians with the outcomes of non-Indigenous Australians with the same observable characteristics can provide insights into whether there are Indigenous-specific causes of disadvantage.

Following suggestions from Aboriginal and Torres Strait Islander Australians, this report has generally adopted a more strengths based approach to reporting (see section 2.2 in chapter 2 for more information). However, this chapter focuses specifically on multiple disadvantage, in order to help understand the interactions between different aspects of disadvantage.

Indicators across this report show that, on average, Aboriginal and Torres Strait Islander Australians experience poorer outcomes than non-Indigenous Australians. While not discounting that disadvantage, it is also important to acknowledge the unique aspects and strengths of Aboriginal and Torres Strait Islander cultures in terms of connection to land,

---

<sup>1</sup> The Steering Committee notes its appreciation to Dr Nicholas Biddle, Centre for Aboriginal Economic Policy Research, who reviewed a draft of this section of the report.

---

culture, spirituality and ancestry, and family, kinship, and community which contribute to resilience and can moderate the impact of stressful life events (Zubrick et al. 2014).

Different aspects of disadvantage often seem to occur together — for example, poor education may be linked with poor employment outcomes, and both may be linked with low income.

- Section 13.1 presents information on the interactions between selected proxy measures of the COAG targets and headline indicators. The data do not indicate cause and effect relationships between different aspects of disadvantage — that is, the data do not demonstrate that disadvantage in one area is the cause of another poor outcome — rather, they show where there are relationships between different aspects of disadvantage. (For more information about the type of data required to measure causality see Biddle 2014a and Productivity Commission 2013).
- Section 13.2 presents an overview of recent work into Aboriginal and Torres Strait Islander multiple disadvantage conducted by other organisations, including the Centre for Aboriginal Economic Policy Research (CAEPR) and the Telethon Kids Institute.

## **13.1 Patterns of disadvantage**

This section examines where different aspects of disadvantage tend to occur together for both Aboriginal and Torres Strait Islander and non-Indigenous Australians. Where a particular population that experiences one type of disadvantage also experiences another kind of disadvantage, the two aspects are assumed to be linked or associated in some way; for example, low levels of educational attainment appear to be linked with high levels of unemployment.

The approach to measuring associations between various indicators is described in box 13.1.2. Data are drawn from the ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS) 2012-13, with non-Indigenous comparator data sourced from the ABS Australian Health Survey (AHS) for the period 2011-12. Indicators using both AATSIHS (2012-13) and AHS (2011-12) are referenced as 2011–13.

### Box 13.1.2 **Measuring associations between the selected proxy measures of the COAG targets, headline indicators and strategic change indicators/areas**

The analysis in this section looks at outcomes in education, employment and income, against selected indicators of disadvantage using data from the ABS AATSIHS 2012-13 and the ABS AHS 2011–13. Subgroups with different education, employment and income characteristics are compared against selected indicators of disadvantage.

<i>Selected measures of disadvantage</i>	<i>COAG target/ headline indicator/strategic change indicator/area</i>
Unemployment	4.6 Employment
Long term unemployment	4.6 Employment
Not in the labour force	4.6 Employment
Without a non-school qualification	4.7 Post-secondary education
Has profound or severe core activity restriction	4.8 Disability and chronic disease
In the lowest quintile of equivalised gross weekly household income	4.9 Household and individual income
In the lowest quintile of personal gross weekly income	4.9 Household and individual income
Household members could not raise \$2000 in an emergency	4.9 Household and individual income
Household members ran out of money in the last two weeks for basic living expenses	4.9 Household and individual income
Speaks English not well or not at all	5.3 Engagement with services
Highest year of school completed was year 9 or below	7 Education and training
Has fair/poor self-assessed health status	8.1 Access to primary health care
Current daily smoker	8.4 Tobacco consumption and harm
Has high/very high psychological distress (K5)	8.7 Mental health
Living in a home not owned by someone in the household	9.3 Home ownership
Principal source of personal income was government pension, allowance or benefits	9.4 Income support
Principal source of personal income was CDEP	9.4 Income support
Living in an overcrowded household	10.1 Overcrowding in housing
Removal – self or a relative has been taken away from family	11 Safe and supportive communities
Alcohol consumption exceeded 2009 lifetime risk NHMRC guidelines	11.1 Alcohol consumption and harm

(continued next page)

---

### Box 13.1.2 (continued)

The analysis:

- classifies the population into various subgroups; (for example has a non-school qualification or has no non-school qualification; is employed or is unemployed)
- compares the proportions of people in each population subgroup who experience other outcomes (for example, comparing the proportions of people *with* and *without* a non-school qualification living in an overcrowded household)
- compares the proportions of people in the Aboriginal and Torres Strait Islander subgroup who experience selected indicators of disadvantage with a comparable subgroup in the non-Indigenous population (for example, comparing the proportion of Aboriginal and Torres Strait Islander Australians without a non-school qualification who have low household income with the proportion of non-Indigenous people without a non-school qualification who have low household income).

This section provides a brief overview of the data, with more information available in the attachment tables.

The data in this section should be interpreted carefully. The measures used are broad and may cover a range of outcomes; for example, the measure ‘with a non-school qualification’ includes a wide range of different non-school qualifications, from certificate I through to postgraduate degrees. If non-Indigenous Australians have obtained non-school qualifications at different levels or in different fields to those obtained by Aboriginal and Torres Strait Islander Australians, they may have different income and employment outcomes.

## Non-school qualifications

In 2012-13, Aboriginal and Torres Strait Islander Australians aged 20–64 years *without* a non-school qualification were more likely than those *with* a non-school qualification to experience other forms of disadvantage, including:

- being out of the labour force (49.0 per cent compared with 24.3 per cent)
- having a government pension, allowance or benefits as their principal source of income (58.4 per cent compared with 30.7 per cent)
- living in a low income household<sup>2</sup> (51.0 per cent compared with 29.3 per cent)
- living in a home not owned by someone in the household (76.5 compared with 59.7 per cent)
- having left school before completing year 10 (36.2 per cent compared with 15.6 per cent) (figure 13.1.1).

---

<sup>2</sup> Defined as the lowest quintile of equivalised gross weekly household income. For more on information on equivalised gross weekly household income, see section 4.9.

Figure 13.1.1 People aged 20–64 years non-school qualification status — with selected characteristics, 2011–13<sup>a,b,c</sup>

<sup>a</sup> See tables 13A.1.1–2 for more information on caveats to these data. <sup>b</sup> Error bars represent 95 per cent confidence intervals around each estimate. <sup>c</sup> The 2011–13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012–13 AATSIHS. Data for non-Indigenous Australians are from the 2011–13 AHS (for the period 2011–12).

Sources: ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012–13; ABS (unpublished) Australian Health Survey 2011–13; tables 13A.1–2.

---

In 2011–13, Aboriginal and Torres Strait Islander Australians with the same levels of educational attainment as non-Indigenous Australians had higher rates for all the selected indicators of disadvantage except for:

- alcohol consumption that exceeded lifetime risk (similar rates around 20 per cent for both Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians with and without a non-school qualification)
- those without a non-school qualification who spoke English not well or not at all (similar rates around 4 per cent for both Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians) (table 13A.1.1–2).

For more information about associations between non-school qualifications and other characteristics of disadvantage see tables 13A.1.1–2. For more information about non-school qualifications in general, see section 4.7 ‘Post-secondary education — participation and attainment’.

## Unemployment and participation in the labour force

In 2012–13, for those aged 15–64 years:

- among Aboriginal and Torres Strait Islander Australians who were not in the labour force:
  - around three-quarters or more were living in a home not owned by someone in the household (79.8 per cent), were receiving a government pension, allowance or benefit as their main source of personal income (74.8 per cent), or did not have a non-school qualification (74.1 per cent)
  - higher proportions had a profound or severe core activity limitation (12.9 per cent), than those who were unemployed for less than 12 months (3.5 per cent), or long term unemployed (5.3 per cent)<sup>3</sup> (table 13A.1.3).
- Aboriginal and Torres Strait Islander Australians who had been unemployed for less than 12 months had lower rates of disadvantage than the long term unemployed:
  - to have a government pension, allowance or benefits as their principal source of personal income (74.8 per cent compared with 86.5 per cent)
  - to be living in a low income household (63.5 per cent compared with 74.3 per cent) (table 13A.1.3).

In 2011–13, for those aged 15–64 years, Aboriginal and Torres Strait Islander Australians who were unemployed or not in the labour force were more likely than non-Indigenous Australians with the same labour force characteristics to experience other forms of disadvantage (figure 13.1.2).

---

<sup>3</sup> Because health and disability are age-related, the proportions not in the labour force with these characteristics are higher than the proportions of the unemployed, as people not in the labour force are likely to have an older age profile than the unemployed population (ABS unpublished).

Figure 13.1.2 **People aged 15–64 years, not in the labour force and unemployed — with selected characteristics, 2011–13<sup>a,b,c</sup>**

<sup>a</sup> See tables 13A.1.3–4 for more information on caveats to these data. <sup>b</sup> Error bars represent 95 per cent confidence intervals around each estimate. <sup>c</sup> The 2011–13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012–13 AATSIHS. Data for non-Indigenous Australians are from the 2011–13 AHS (for the period 2011–12).

---

For more information on characteristics of disadvantage for people who were unemployed or not in the labour force, see tables 13A.1.3–4. For more information about unemployment or labour force characteristics in general see sections 4.6 and 9.1.

## Personal gross weekly income

In 2012–13, for those aged 18 years and over:

- close to three quarters of Aboriginal and Torres Strait Islander Australians in the lowest quintile of personal gross weekly income lived in a home not owned by someone in the household (76.1 per cent) or had a government pension, allowance or benefit as their main source of income (73.5 per cent) (figure 13.1.3)
- over two-thirds of Aboriginal and Torres Strait Islander Australians in the lowest quintile of personal gross weekly income were in the lowest quintile of gross weekly household income (70.3 per cent) or did not have a non-school qualification (69.1 per cent) (table 13A.1.5)

In 2011–13, for those aged 18 years and over:

- Aboriginal and Torres Strait Islander Australians in all quintiles of personal gross weekly income were more likely to experience most other forms of disadvantage than non-Indigenous Australians in the respective quintiles (that is, even for higher earning individuals, disadvantage is greater for Aboriginal and Torres Strait Islander Australians than for non-Indigenous Australians). However, there was no significant difference for:
  - those in the highest quintile whose alcohol consumption exceeded lifetime risk (30.4 per cent for Aboriginal and Torres Strait Islander Australians and 29.4 per cent for non-Indigenous Australians) and those who had a profound or severe core activity limitation (4.4 per cent of Aboriginal and Torres Strait Islander Australians and 1.5 per cent of non-Indigenous Australians)
  - those in the second to the fourth quintiles whose alcohol consumption exceeded lifetime risk (18.9 per cent for Aboriginal and Torres Strait Islander Australians, and 18.3 per cent for non-Indigenous Australians)
  - those in the lowest quintile who had a profound or severe core activity limitation (7.4 per cent of Aboriginal and Torres Strait Islander Australians and 5.8 per cent of non-Indigenous Australians) and those who spoke English not well or not at all (5.3 per cent of Aboriginal and Torres Strait Islander Australians and 6.4 per cent of non-Indigenous Australians) (table 13A.1.5–6).

The lowest and highest quintiles for Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians with selected characteristics of disadvantage are presented in figure 13.1.3. For more information on multiple disadvantage by quintiles of personal gross weekly income see tables 13A.1.5–6. Section 4.9 contains more data on income.

Figure 13.1.3 **People aged 18 years and over, personal gross weekly income — with selected characteristics, 2011–13<sup>a,b,c,d,e</sup>**

<sup>a</sup> Government benefit is not shown for people in the highest quintile due to high relative standard errors (greater than 50 per cent). <sup>b</sup> See tables 13A.1.5–6 for more information on caveats to these data. <sup>c</sup> Error bars represent 95 per cent confidence intervals around each estimate. <sup>d</sup> 'Lowest quintile' refers to the 20 per cent of people with the lowest incomes. 'Highest quintile' refers to the 20 per cent of people with the highest incomes. <sup>e</sup> The 2011–13 reference year includes data for Aboriginal and Torres Strait Islander Australians from the 2012–13 AATSIHS. Data for non-Indigenous Australians are from the 2011–13 AHS (for the period 2011–12).

Sources: ABS (unpublished) Australian Aboriginal and Torres Strait Islander Health Survey 2012–13; ABS (unpublished) Australian Health Survey 2011–13; tables 13A.1.5–6.

---

## Principal source of personal income

In 2012-13, Aboriginal and Torres Strait Islander Australians aged 18–64 years whose principal source of personal income was:

- a government pension, allowance or benefits, had higher rates of disadvantage across all indicators than those whose principal income was employee cash income, except for: lifetime risk of harm from drinking (which was lower — 17.6 per cent compared with 23.5); and removal of self or relative from family, which were similar between the two groups (48.2 per cent and 46.0 per cent, respectively)
- other cash income (including CDEP) had lower rates of disadvantage for most indicators than those whose primary source of income was a government pension, allowance or benefits (figure 13.1.4 and table 13A.1.7). (In the 2012-13 AATSIHS, information about CDEP participation was only collected in remote areas (in earlier ABS surveys, CDEP participation was collected in both remote and non-remote areas). Some of the characteristics associated with people who have CDEP as a principal source of income are likely to reflect the circumstances of Aboriginal and Torres Strait Islander people living in remote areas.)

In 2011–13 for those aged 18–64 years, Aboriginal and Torres Strait Islander Australians generally had higher rates of disadvantage than non-Indigenous Australians regardless of the principal source of personal income. Both Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians whose principal source of personal income was a government pension, allowance or benefits were more likely to experience disadvantage than those whose principal source of personal income was employee cash income (tables 13A.1.7–8).

For more information on association of principal source of personal income with indicators of disadvantage see tables 13A.1.7–8. Section 4.6 (‘Employment’) contains general information and analysis on CDEP. Section 9.4 (‘Income support’) contains analysis on government pensions, allowances and benefits. Section 4.9 (‘Household and individual income’) contains more information on income.

**Figure 13.1.4 Indigenous people aged 18–64 years, principal source of personal income — selected characteristics, 2012-13<sup>a,b,c</sup>**

<sup>a</sup> 'Other cash income' includes owners of unincorporated businesses, participants in CDEP programs, and any other source of regular income. <sup>b</sup> See table 13A.1.7 for more information on caveats to these data. <sup>c</sup> Error bars represent 95 per cent confidence intervals around each estimate.

## 13.2 Recent research into multiple disadvantage

Work reported in previous *Overcoming Indigenous Disadvantage* reports included analysis of the determinants of labour market outcomes for Aboriginal and Torres Strait Islander Australians:

- the 2011 report analysed data from the National Aboriginal and Torres Strait Islander Social Survey (NATSISS) 2008, and found that better levels of health, more education and additional years of work experience are associated with a greater probability of being in the labour force and being employed. History of arrest was negatively associated with employment and labour force participation, as was imprisonment rates for men (SCRGSP 2011)
- the 2009 report analysed data from the 2006 Census, and found that for both males and females, those who had attained higher than year 8 were more likely to be in the labour force and were less likely to be unemployed than those whose highest level of educational attainment was year 8 or below. This effect was stronger for Aboriginal and Torres Strait Islander Australians than for non-Indigenous Australians (SCRGSP 2009).

The remainder of this section presents an overview of recent work into Aboriginal and Torres Strait Islander multiple disadvantage conducted by other organisations, including the Centre for Aboriginal Economic Policy Research (CAEPR) and the Telethon Kids Institute.

### Centre for Aboriginal Economic Policy Research

The Centre for Aboriginal Economic Policy Research (CAEPR) is a social science research body focusing on Indigenous economic and social policy, and sits within the Australian National University.

In 2012 and 2013, CAEPR authors released the Indigenous Population Project: 2011 Census Papers, which aim to document the changing composition and distribution of different Indigenous outcomes following the increase in Aboriginal and Torres Strait Islander identification in the 2011 Census (see chapter 3 for more information). Key results include:

- preschool alone is not enough to ensure all Aboriginal and Torres Strait Islander children start school in the same developmental position as their non-Indigenous peers. Although Aboriginal and Torres Strait Islander children who participate in preschool tend to start school with lower rates of developmental vulnerability than those who do not, once preschool is controlled for there are still very large gaps between Aboriginal and Torres Strait Islander and non-Indigenous students. In addition, large gaps in preschool participation still remain between Aboriginal and Torres Strait Islander and non-Indigenous children once geography and other characteristics are controlled for (Bath and Biddle 2013)

- 
- Analysis of the Longitudinal Study of Australian Youth (LSAY) showed that socioeconomic status and school sector explains some, but not all of the difference in maths, reading and science test scores between Aboriginal and Torres Strait Islander and non-Indigenous students aged 15 years old in 2009 (Biddle 2013a)
  - although some of the difference in Year 12 completion rates between Aboriginal and Torres Strait Islander Australians and non-Indigenous Australians can be explained by geography, even if geographic distribution were the same, completion rates for Aboriginal and Torres Strait Islander Australians would still be lower (Bath and Biddle 2011)
  - there is great variation in income within the Aboriginal and Torres Strait Islander population as well as great variation between the Aboriginal and Torres Strait Islander population and the non-Indigenous population. Despite this variation, for almost every demographic, geographic, education and employment combination, Aboriginal and Torres Strait Islander Australians had a lower average income than their non-Indigenous counterparts. The only major exception to this was Aboriginal and Torres Strait Islander females with a degree, who had a slightly higher average income than non-Indigenous females with a degree (Biddle 2013a)
  - factors affected by Aboriginal and Torres Strait Islander Australians' location include income and housing tenure. Aboriginal and Torres Strait Islander Australians in urban areas are more likely to live in areas where their neighbours have a low income or live in community rental housing (Biddle 2013b).

In 2011, CAEPR presented a number of online lectures summarising the evidence on Indigenous wellbeing from the 2008 National Aboriginal and Torres Strait Islander Social Survey (NATSISS), with a focus on variation in measures of wellbeing across the life course (Biddle 2011). Key findings included:

- health and maintenance of Aboriginal and Torres Strait Islander culture is a part of, and a determinant of, wellbeing
- being a victim of crime is associated with lower levels of emotional wellbeing, and lower subjective wellbeing is related to a higher chance of future arrest
- Aboriginal and Torres Strait Islander Australians living in remote areas had higher levels of emotional wellbeing and self-assessed health than those in non-remote areas
- employed Aboriginal and Torres Strait Islander Australians have higher emotional wellbeing and self-assessed health than the unemployed (Biddle 2011).

A recent research paper examines factors linking disadvantage and education. Biddle (2014b) analysed the NATSISS, the Longitudinal Study of Indigenous Children (LSIC), the Longitudinal Study of Australian Children (LSAC) and the LSAY to develop a behavioural model that explains patterns of school attendance for Aboriginal and Torres Strait Islander children and youth. Biddle found that Aboriginal and Torres Strait Islander students are more likely to miss school (with or without permission) than non-Indigenous children, and that a range of individual, school and family characteristics explain some, but not all, of the difference. Key contributing factors include:

- 
- health: with sick children less likely to attend school
  - carers with lower levels of school education: higher levels of absenteeism amongst children in their care
  - household stress: housing issues and family crises predict non-attendance better than children being from families on income support.

## Telethon Kids Institute

The Telethon Kids Institute is a research centre based in Western Australia, which aims to improve the health and wellbeing of children through research. It has an explicit focus on the health and wellbeing of Aboriginal and Torres Strait Islander children and their families.

Recent research focuses on socioeconomic factors and aspects of disadvantage which affect the health of Aboriginal and Torres Strait Islander populations. Shepherd, Li and Zubrick (2012b) analysed the Western Australian Aboriginal Child Health Survey (WAACHS)<sup>4</sup> conducted in 2000–2002, for socioeconomic differences in the physical health of Aboriginal and Torres Strait Islander children in Western Australia. They found that socioeconomic characteristics of carers (educational attainment of both primary and secondary carers and highest occupational class of carers), families/households (family financial strain, housing tenure, housing quality) and neighbourhoods/communities (two indexes of socio-economic disadvantage) all have an influence on the physical health of Aboriginal and Torres Strait Islander children, with the strongest impact seen with area measures of socioeconomic status. Moreover, within the Aboriginal and Torres Strait Islander population aged 0–17 years, the rate of ear infections, recurring chest infections and sensory function problems followed a ‘positive social gradient’ — that is, as socioeconomic status increased the rate of these health problems decreased. However, the reverse phenomena was found for asthma, accidents and injuries, and oral health problems — that is, as socioeconomic status increased, the rate of these health problems also increased. Whilst the factors behind this phenomena were not tested by the authors, they theorised that it could be due to a decrease in early childhood exposure to infections (asthma), a greater availability of recreational activities and facilities (accidents and injuries), and better access to dental health services (detection of oral health problems).

Shepherd et al. (2012) conducted a similar analysis focusing on the mental health of Aboriginal and Torres Strait Islander children. This study found that higher parental and household socioeconomic status was generally associated with better child mental health outcomes. There was also evidence of a positive social gradient, with a higher risk of

---

<sup>4</sup> The Western Australian Aboriginal Child Health Survey (WAACHS) was undertaken between 2000 and 2001 by the (then) Telethon Institute for Child Health Research and is a project of the Kulunga Research Network. The survey was designed to investigate the health, wellbeing and development of Western Australian Aboriginal and Torres Strait Islander children.

---

‘clinically significant emotional or behavioural difficulties’ in those experiencing more disadvantage, especially in the areas of housing quality and tenure.

Both the work of CAEPR and the Telethon Kids Institute advocate an understanding of the different impacts of socioeconomic status across Aboriginal and Torres Strait Islander and non-Indigenous populations, and note that the understanding of concepts such as participation in the labour market, income, and educational attainment may differ between these populations. As such, the extent to which multiple disadvantage can be lessened as a result of improvements in these areas may also be different to how these gains would be made in the non-Indigenous population (Biddle 2009; Shepherd, Li and Zubrick 2012a, 2012b).

TABLE 13A.1.1

Table 13A.1.1      **Associations between different indicators of disadvantage, Indigenous people aged 20–64 years, non-school qualification status, 2012-13 (a), (b)**

<i>Unit</i>	Estimate			Relative standard error			95 per cent confidence intervals		
	<i>Without a non-school qualification</i>	<i>With a non-school qualification</i>	<i>All people</i>	<i>Without a non-school qualification</i>	<i>With a non-school qualification</i>	<i>All people</i>	<i>Without a non-school qualification</i>	<i>With a non-school qualification</i>	<i>All people</i>

\* Australian Aboriginal and Torres Strait Islander Health Survey (Core component). \*\* Australian Aboriginal and Torres Strait Islander Health Survey (NATSIHS component). \*\*\* Remote and Very Remote areas only.

- (a) Non-school qualifications are awarded for educational attainments other than those of pre-school, primary or secondary education. Includes from Certificate I to Postgraduate degree. Includes a small number of people aged 20–24 years who were still at school.
- (b) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution.
- (c) Includes people who never attended school.
- (d) Based on national income quintiles as defined in the 2012-13 National Aboriginal and Torres Strait Islander Social Survey user guide.
- (e) Proportion based on people in households in which income was stated (139 900, 118 000 and 257 800).
- (f) Proportion based on people for whom income was stated (167 000, 136 400 and 303 400).
- (g) There is no equivalent indicator for non-Indigenous people.
- (h) Proportion based on people for whom housing utilisation could be determined (172 900, 142 700 and 315 600).
- (i) For more information see the 2009 NHMRC guidelines.
- (j) Denominator for proportion excludes people with no Kessler score.  
– Nil or rounded to zero.

**CDEP** = Community Development Employment Projects. **NHMRC** = National Health and Medical Research Council.

- (a) Based on national income quintiles as defined in the 2012-13 Australian Aboriginal and Torres Strait Islander Health Survey user guide.
  - (b) Estimates with a relative standard error of between 25 per cent to 50 per cent should be used with caution. Estimates with a RSE greater than 50 per cent are considered too unreliable for general use.
  - (c) Includes people who did not state or know their personal income.
  - (d) Non-school qualifications are awarded for educational attainments other than those of pre-school, primary or secondary education. Includes from Certificate I to Postgraduate degree. Includes people who never attended school.
  - (e) Includes a small number of people aged 18–24 years who were still at school.
  - (f) Proportion based on people in households in which income was stated (74 600, 192 600, 25 600 and 292 700).
  - (g) There is no equivalent indicator for non-Indigenous people.
  - (h) Proportion based on people for whom housing utilisation could be determined (92 900, 225 000, 30 000 and 364 100).
  - (i) For more information see the 2009 NHMRC guidelines.
  - (j) Denominator for proportion excludes people with no Kessler score.
- Nil or rounded to zero.

# Appendix 1 COAG Communiques

## **Extract from COAG Communiqué 3 November 2000**

### **Aboriginal reconciliation**

The Council committed itself to an approach based on partnerships and shared responsibilities with Indigenous communities, programme flexibility and coordination between government agencies, with a focus on local communities and outcomes. It agreed priority actions in three areas:

- investing in community leadership initiatives;
- reviewing and re-engineering programmes and services to ensure they deliver practical measures that support families, children and young people. In particular, governments agreed to look at measures for tackling family violence, drug and alcohol dependency and other symptoms of community dysfunction; and
- forging greater links between the business sector and Indigenous communities to help promote economic independence.

## **Extract from COAG Communiqué 5 April 2002**

### **Reconciliation**

The Council also agreed to commission the Steering Committee for the Review of Commonwealth/State Service Provision to produce a regular report against key indicators of Indigenous disadvantage. This report will help to measure the impact of changes to policy settings and service delivery and provide a concrete way to measure the effect of the Council's commitment to reconciliation through a jointly agreed set of indicators.

---

## **Extract from COAG Communiqué 14 July 2006**

### **Generational Commitment**

COAG agreed that a long-term, generational commitment is needed to overcome Indigenous disadvantage. COAG agreed the importance of significantly closing the gap in outcomes between Indigenous people and other Australians in key areas for action as identified in the *Overcoming Indigenous Disadvantage: Key Indicators Report* (OID) released by COAG in 2003.

COAG has agreed to establish a working group to develop a detailed proposal for generational change including specific, practical proposals for reform which reflect the diversity of circumstances in Australia.

The working group will consider how to build clearer links between the OID framework, the National Framework of Principles for Delivering Services to Indigenous Australians, the COAG Reconciliation Framework and the bilateral agreements between the Commonwealth and State and Territory Governments. The working group will report back to COAG by December 2006.

## **Extract from COAG Communiqué 13 April 2007**

### **Indigenous Generational Reform**

COAG requested that the Indigenous Generational Reform Working Group prepare a detailed set of specific, practical proposals for the first stage of cumulative generational reform for consideration by COAG as soon as practicable in December 2007. National initiatives will be supported by additional bi-lateral and jurisdiction specific initiatives as required to improve the life outcomes of young Indigenous Australians and their families.

COAG also agreed that urgent action was required to address data gaps to enable reliable evaluation of progress and transparent national and jurisdictional reporting on outcomes. COAG also agreed to establish a jointly-funded clearing house for reliable evidence and information about best practice and success factors.

---

## **Extract from COAG Communiqué 20 December 2007**

### **Indigenous Australia**

COAG agreed the 17 year gap in life expectancy between Indigenous and non-Indigenous Australians must be closed<sup>1</sup>.

COAG today agreed to a partnership between all levels of government to work with Indigenous communities to achieve the target of closing the gap on Indigenous disadvantage. COAG committed to:

- closing the life expectancy gap within a generation;
- halving the mortality gap for children under five within a decade<sup>2</sup>; and
- halving the gap in reading, writing and numeracy within a decade.

COAG has also agreed that States and Territories will report transparently on the use of their Commonwealth Grants Commission funding which is on the basis of Indigenous need funding for services to Indigenous people.

## **Extract from COAG Communiqué 26 March 2008**

### **Indigenous Reform**

COAG agreed on a series of specific actions across health, education, affordable housing and water supply, that will begin to improve the lives of Indigenous Australians, including to provide at least 48 000 dental services to Indigenous people over four years under the new Commonwealth Dental Health Program, targeting the needs of Indigenous Australians through the Transition Care initiative, the elective surgery waiting list reduction plan and the Place to Call Home program for homeless people.

---

<sup>1</sup> The ABS has since revised life expectancy data for Indigenous Australians. However, the COAG target to halve it within a generation remains.

<sup>2</sup> The ABS has since revised the Indigenous population projections and total population estimates which are required to calculate the mortality rates. However, the COAG target to halve the gap within a decade remains.

---

## **Extract from COAG Communiqué 3 July 2008**

### **Indigenous Reform — Closing the Gap**

Leaders agreed to sustained engagement and effort by all governments over the next decade and beyond to achieve the Closing the Gap targets for Indigenous people.

As a first step, COAG agreed in principle to a National Partnership (NP) with joint funding of around \$547.2 million over six years to address the needs of Indigenous children in their early years.

COAG agreed that the Working Group on Indigenous Reform (WGIR) should continue to develop reform proposals for improving community safety, remote service delivery and Indigenous economic development and active welfare for consideration in October 2008. In addition, COAG requested the WGIR, in conjunction with other Working Groups, to report to COAG in December 2008 on how COAG's broader reform agenda will deliver an integrated strategy on closing the gap for all Indigenous people.

## **Extract from COAG Communiqué 29 November 2008**

### **National Indigenous Reform Agreement**

COAG agreed to the National Indigenous Reform Agreement (NIRA) which captures the objectives, outcomes, outputs, performance measures and benchmarks that all governments have committed to achieving through their various National Agreements and NPs in order to close the gap in Indigenous disadvantage. The NIRA provides an overarching summary of action being taken against the closing the gap targets as well as the operation of the mainstream national agreements in health, schools, vocational education and training (VET), disability services and housing and several NPs. The NIRA will be a living document, refined over time based on the effectiveness of reforms in closing the gap on Indigenous disadvantage.

### **Closing the Gap COAG Meeting in 2009**

In October 2008, COAG agreed to convene a dedicated meeting in 2009 on closing the gap on Indigenous disadvantage.

COAG has asked for advice on how the NPs and National Agreements will collectively lead to a closing of the gap and what further reforms are needed. In addition to this, COAG has asked for a Regional and Urban Strategy to coordinate the delivery of services to Indigenous Australians and examine the role that private and community sector initiatives

---

in education, employment, health and housing can make to the success of the overall strategy.

## **Revised framework of the Overcoming Indigenous Disadvantage Report**

In April 2002, COAG commissioned the Productivity Commission's Steering Committee for the Review of Government Service Provision to produce a regular report against key indicators of Indigenous disadvantage, with a focus on areas where governments can make a difference. The resulting Overcoming Indigenous Disadvantage (OID) Report has been published every two years since 2003.

COAG agreed to a new framework for the OID Report that is aligned with the closing the gap targets.

## **Extract from COAG Communiqué 30 April 2009**

### **Coordinator-General for Remote Indigenous Services**

COAG agreed to the operating arrangements for the Coordinator-General for Remote Indigenous Services (the Coordinator General). The Coordinator-General will work with coordinators identified by Commonwealth agencies and State and Northern Territory coordinators-general to coordinate planning for, and monitor the delivery of, programs and services in the 26 locations selected under the Remote Service Delivery National Partnership (NP) agreed by COAG at its November 2008 meeting.<sup>3</sup>

## **Extract from COAG Communiqué 2 July 2009**

As agreed at its meeting in Perth last October, COAG focused today on its Closing the Gap commitments in relation to Indigenous disadvantage.

The Chair of the Productivity Commission, Mr Gary Banks AO, gave a presentation to COAG on the findings of the report *Overcoming Indigenous Disadvantage: Key Indicators 2009*. The report shows that while there has been some progress against the Closing the Gap targets, such as infant mortality, employment and home ownership, overall the gap between Indigenous and non-Indigenous Australians remains unacceptable. This presentation coincided with the joint launch of the report by the Minister for Families,

---

<sup>3</sup> The role and function of the Coordinator General concluded in January 2014. The Department of Prime Minister and Cabinet took over responsibility for overseeing the requirements under the NP until it expired on 30 June 2014.

---

Housing, Community Services and Indigenous Affairs, the Hon Jenny Macklin MP, and Mr Banks.

Given this context, COAG agreed that effective implementation of the existing National Agreements and National Partnership Agreements was vital to close the gap in Indigenous outcomes. As part of COAG's increasing focus on implementation issues, particular effort will be needed on Indigenous outcomes.

This work will be supported by the Coordinator-General for Remote Indigenous Services, Mr Brian Gleeson, who has recently been appointed and will report to Minister Macklin and COAG. The Coordinator-General's role is to cut through bureaucratic blockages and red tape, and to make sure services are delivered in remote communities.

While the Productivity Commission's Report has framed the significant work to be undertaken, each First Minister gave a presentation to COAG on programs that are working within each jurisdiction to demonstrate the critical success factors that underpin Closing the Gap.

In addition, COAG asked the Working Group on Indigenous Reform to prepare a national strategy to improve food security for Indigenous people living in remote Australia before the end of 2009, adopted a National Integrated Strategy for Closing the Gap, agreed to a Closing the Gap: National Indigenous Education Statement, and signed a Closing the Gap: National Partnership Agreement on Remote Indigenous Public Internet Access. COAG also agreed to a Closing the Gap; National Urban and Regional Service Delivery Strategy to address Indigenous disadvantage in urban and regional locations.

## **National Integrated Strategy for Closing the Gap in Indigenous Disadvantage**

The National Integrated Strategy for Closing the Gap in Indigenous Disadvantage, which COAG endorsed, identifies how investment of additional funds under existing COAG agreements will make a real difference in addressing Indigenous disadvantage. As part of the Integrated Strategy, the Commonwealth is to provide an additional \$46.4 million over four years to fund work undertaken by national data agencies, such as the Australian Bureau of Statistics and the Australian Institute of Health and Welfare, to improve the evidence base and address data gaps.

## **Closing the Gap: National Urban and Regional Service Delivery Strategy**

To close the gap, there will need to be a concerted effort by government among the 75 per cent of Indigenous Australians who live in urban and regional locations across Australia.

---

COAG therefore agreed to a Closing the Gap: National Urban and Regional Service Delivery Strategy, which commits governments to coordinate and target the substantial funding provided under mainstream and Indigenous-specific programs to address Indigenous disadvantage in urban and regional locations.

## **Extract from COAG Communiqué 7 December 2009**

### **Report from the Coordinator-General for Remote Indigenous Services**

COAG noted the first report from the Coordinator-General for Remote Indigenous Services had been launched on 4 December 2009. The Report recommends improved coordination of Commonwealth and State service delivery in the 29 priority remote communities, particularly in efforts to improve community governance, education and training, delivery of renal health services and reporting. COAG has requested the WGIR report in early 2010 on actions taken to address the recommendations contained in the report.

## **Extract from COAG Communiqué 19 April 2010**

COAG noted the Working Group on Indigenous Reform's progress status report addressing the recommendations of the 4 December 2009 report of the Coordinator-General for Remote Indigenous Services.

In noting the report from the Working Group, COAG restated its commitment to closing the gap on Indigenous disadvantage and to continued active consideration of the needs of the 29 priority communities under the National Partnership on Remote Service Delivery when implementing COAG National Partnerships relevant to remote communities. COAG also committed to continuing its monitoring of progress of the National Partnership on Remote Service Delivery through existing mechanisms.

## **Extract from COAG Communiqué 13 February 2011**

COAG adopted a streamlined agenda built around five themes of strategic importance that lie at the intersection of jurisdictional responsibilities:

- a long-term strategy for economic and social participation;
- a national economy driven by our competitive advantages;
- a more sustainable and liveable Australia;
- better health services and a more sustainable health system for all Australians

- 
- Closing the Gap on Indigenous disadvantage.

COAG renewed its commitment to strong ongoing monitoring and reporting of important national initiatives to ensure that they meet their goals and are delivered in a timely way. As part of the emphasis placed on implementation, governments committed to prioritising the passage of legislation to give effect to agreements reached by COAG.

## **Extract from COAG Communique 13 December 2013**

### **Improving outcomes for Indigenous Australians**

More needs to be done to ensure Indigenous Australians can access the same quality of services and have the same opportunities as other Australians.

There is no quick fix, and governments will need to focus on all areas of policy to make a difference, including education, health, housing, economic development and employment, in urban, regional and remote Australia.

In recent years, school attendance for Indigenous children in some areas has gone backwards. That is unacceptable.

While a lot of work is already underway across governments, COAG agreed an immediate, stronger focus is required to keep kids in schools and ensure safer communities.

COAG agreed to a range of measures to improve Indigenous school attendance, including:

- minimum school attendance benchmarks;
- publishing twice-yearly data on school attendance for all students broken down by Indigenous and non-Indigenous;
- ‘no-excuses’ messaging campaign;
- support and compliance, such as truancy officers, to ensure children attend school; and
- conducting audits of attendance, including on-the-spot audits.

All governments agreed to work together on additional strategies to improve Indigenous school attendance in remote schools and communities, recognising this will lead to better outcomes.

Recognising that each State’s circumstances are different, COAG agreed that some flexibility in support and compliance measures may be needed.

Indigenous Australians, like all Australians, have a right to live in communities safe from violence and abuse.

---

There are some remote Indigenous communities (with populations greater than 300) with no permanent police presence and where nearby police cannot respond quickly.

COAG agreed to work together to ensure these communities are safe, including through establishing a permanent police presence in some additional communities.

## **Extract from COAG Communique 2 May 2014**

### **Improving outcomes for Indigenous Australians**

COAG noted early evidence of success in the work of all jurisdictions working with communities to improve school attendance of Indigenous children. But there is still more to do.

COAG agreed the new five-year target of Closing the Gap between Indigenous and non-Indigenous school attendance, and to ensure it is met, COAG agreed to:

- the Commonwealth and the States and Territories, in partnership with communities, developing specific strategies by no later than 31 October 2014, to improve school attendance where the attendance rate for Indigenous children is below 80 per cent;
- each State and Territory monitoring Indigenous students' attendance rates in schools where they are below 80 per cent at least every month;
- each State and Territory undertaking on-the-spot audits of school attendance information before the end of the year; and
- public reporting of school attendance information, recognising privacy issues, later in 2014, and then twice yearly from 2015 onwards.

COAG also agreed to work more closely with Indigenous communities and take practical approaches to target action and investment to agreed local priorities. As a result, communities and local leaders should be more engaged and better able to share the responsibility for setting priorities and improving outcomes in their own communities.

## **Extract from COAG Communique 10 October 2014**

### **Indigenous Affairs**

COAG agreed jurisdictions need to work together to ensure Indigenous people have access to the same opportunities as non-Indigenous people.

All governments agreed that greater effort is required to meet our educational targets for Indigenous children and this will require commitment and integrated action at a

---

community level. COAG agreed to further actions to improve Indigenous students' school attendance and to share evidence of actions that work to improve school attendance. The Commonwealth will work bilaterally with states on:

- more regular reporting of school attendance where there are significant attendance issues, so attendance remains a focus and evidence-based action is taken quickly if rates do not increase;
- effective use of truancy measures, so parents and communities see a direct consequence if they fail to ensure their children attend school; and
- aligning and integrating each government's efforts.

COAG acknowledged there are already many accomplished teachers and principals working in regional and remote schools. COAG asked Education Ministers to report on strategies to attract and retain quality teachers and school leaders to regional and remote schools. A progress report on this, and school attendance, will be provided to COAG at its first meeting in 2015.

COAG noted Mr Andrew Forrest's report to the Commonwealth, *Creating Parity – The Forrest Review*, on his review of Indigenous training and employment programmes. Jurisdictions noted his key finding that a decent education provides a strong basis for parity in employment outcomes.

The Forrest Review makes broad and ambitious recommendations to the Commonwealth on areas of Commonwealth, state and shared responsibility. COAG discussed priority areas and agreed to identify areas that would benefit from bilateral action, with agreements to be finalised by the end of the year.

COAG noted that the Commonwealth, the Northern Territory and Queensland will urgently investigate Indigenous land administration and land use to enable traditional owners to readily attract private sector investment and finance to develop their own land with new industries and businesses to provide jobs and economic advancement for Indigenous people. The Commonwealth, Northern Territory and Queensland will report on this issue to the first COAG meeting in 2015.

---

# Appendix 2 Implementation of the framework

## **Jurisdictions' comments**

This appendix provides comments by the Australian Government and State and Territory governments, summarising the implementation of the framework in each jurisdiction:

- Australian Government
- New South Wales
- Victoria
- Queensland
- Western Australia
- South Australia
- Tasmania
- Australian Capital Territory
- Northern Territory.

---

## Australian Government comments

The Australian Government is committed to improving life outcomes for Indigenous Australians. The Government is focusing on the critical areas of education, employment and community safety. Improvements in these areas will lead to progress against the Closing the Gap targets agreed by the Council of Australian Governments (COAG). Six Closing the Gap targets in health, employment and education were agreed by COAG in 2008. In addition to this, COAG agreed on 2 May 2014 to the Prime Minister's proposal for a new five-year target to close the gap between Indigenous and non-Indigenous school attendance.

A key focus of the Government is on school attendance. The Government's *Remote Schools Attendance Strategy* will get children back to school in 69 remote communities. Funding of \$46.5 million over two years will employ School Attendance Officers and Supervisors to support children to attend school.

The Commonwealth and the States and Territories, in partnership with communities, are developing specific strategies to improve school attendance where the attendance rate for Indigenous children is below 80 per cent.

On employment, the Forrest review of Indigenous employment and training programmes has been completed. The review aims to ensure these programmes are targeted to better connect unemployed Indigenous people with real and sustainable employment.

On community safety, the Government will continue to engage with stakeholders on ways to make a practical difference on the ground that will ensure communities are safe.

Three new initiatives were announced in the 2014-15 Budget with the specific aim of ensuring that Indigenous Australians can live in communities where crime rates are low and people can go about the ordinary business of making a living and raising a family.

The Australian Government is also committed to the recognition of Aboriginal and Torres Strait Islander peoples in Australia's Constitution.

The Government's *Indigenous Advancement Strategy* streamlines over 150 programmes and activities into five simplified streams with total funding of \$4.8 billion over four years.

---

<i>Indigenous Advancement Strategy</i>	<i>Purpose</i>	<i>Funding (over 4 years)</i>
1. Jobs, Land and Economy	Supporting adults into work, Indigenous business and assisting Indigenous people generate economic and social benefits from effective use of land	\$2.5 billion
2. Children and Schooling	Getting children into school, improving education outcomes and supporting families to give children a good start in life	\$917 million
3. Safety and Wellbeing	Ensuring that the ordinary rule of law applies in Indigenous communities and also supporting Indigenous health and emotional and social wellbeing	\$993 million
4. Culture and Capability	Supporting Indigenous culture, participation in the life of the nation and ensuring organisations are capable of delivering services	\$140 million
5. Remote Australia Strategies	Strategic investment in local solutions including home ownership, remote housing and infrastructure	\$258 million

The Government has also established the Indigenous Australian's Health Programme. This Programme consolidated four existing funding streams into one and will provide greater flexibility to ensure funding is allocated to where the need is greatest.

The Government has established a new engagement with Aboriginal and Torres Strait Islander people to help achieve these goals. The Prime Minister's Indigenous Advisory Council and the Empowered Communities Initiative are examples of Indigenous Australians being involved in decisions that affect them.

---

## **New South Wales Government comments**

The NSW Government remains committed to supporting Aboriginal people to reach their potential and tap the social and economic opportunities that exist in their communities and across the State. A number of broad strategies have been established to guide the achievement of improved social outcomes.

### **NSW 2021**

NSW 2021 is the NSW Government's 10-year plan to rebuild the economy, return quality services, renovate infrastructure, restore accountability to government, and strengthen our local environment and communities. Goal 26 of the plan aims to foster greater opportunity and partnership with Aboriginal people across the State.

### **Aboriginal Health Plan**

Commitment to improving the health of Aboriginal people in NSW is reaffirmed through the NSW Aboriginal Health Plan 2013–2023, a plan developed in partnership with the Aboriginal Health and Medical Research Council (AH&MRC) of NSW. The Plan sets out a long term approach through six Strategic Directions, which will be achieved by building trust through partnerships; developing the evidence and implementing what works; integrating planning and service delivery; strengthening the Aboriginal workforce; providing culturally safe working environments and health services; and strengthening management, accountability and performance monitoring throughout the NSW health system.

### **Family and Community Services**

The Department of Family and Community Services' new Strategic Directions seeks to achieve better outcomes for Aboriginal people, families and communities and improve how we work with Aboriginal people to deliver responsive, culturally appropriate services tailored to community needs. FACS is developing an Aboriginal Cultural Inclusion Framework which will improve accountability and monitoring to Government and back to communities on significant areas such as the safety of Aboriginal children, supports and services provided to vulnerable Aboriginal clients in need of housing, ageing and disability care.

---

## OCHRE Plan for Aboriginal affairs

*OCHRE – Opportunity, Choice, Healing, Responsibility, Empowerment* is the NSW Government plan for Aboriginal affairs and is the product of extensive consultations involving more than 2600 individuals, 14 Aboriginal community forums, more than 200 submissions and 400 electronic survey responses from across NSW. The plan is deliberately limited in its focus to ensure resources are targeted in those areas which will generate broader benefits.

The OCHRE plan consists of a number of initiatives, including:

- the establishment of a Deputy Ombudsman for Aboriginal Programs to monitor and assess government service delivery to Aboriginal people, and reflecting an overall focus of OCHRE on greatly improved accountability and transparency in government services
- Connected Communities changes the way educational services are delivered in 15 Aboriginal communities across NSW
- Opportunity Hubs provide improved pathways for young Aboriginal people in the transition from school into tertiary education, training and/or employment. Four are now operating
- Aboriginal Language and Culture Nests associated with five Aboriginal languages to greatly improve the ability of Aboriginal people to learn their own language; to revitalise and maintain languages and preserve them into the future
- Local Decision Making seeks to ensure that services in selected communities (currently three) are responsive to local needs and aspirations through building decision making capability and strengthened governance arrangements for service delivery at the community level
- Economic participation seeks to access the untapped potential in Aboriginal communities for wealth creation and economic independence through the development of a broad Aboriginal Economic Development Framework. Additional activities include Industry-Based Agreements with key industry groups (two have thus far been signed: with the Minerals Council of NSW and the Master Builders Association), and an Aboriginal Employment Strategy to improve Aboriginal public sector employment.

The NSW Government has undertaken a review of the Aboriginal Land Rights Act (ALRA). Proposed legislation will better reflect and support the economic, social and cultural development aspirations of Aboriginal people across the State.

---

## Victorian Government comments

In Victoria, successive governments have shared a longstanding commitment to improving the quality of life of Aboriginal Victorians and closing the gaps between Aboriginal and non-Aboriginal Victorians.

Closing the gaps in Victoria requires sustained effort from all levels of government, Aboriginal communities and their organisations as well as the private sector and the broader Victorian community.

Victoria continues to apply effort in areas such as maternal health, primary care, early childhood development, education and economic participation to improve outcomes. Actions in these areas by both the State and the Commonwealth Governments in partnership with Aboriginal communities are central to helping individuals and families and to close the gaps in outcomes.

There are areas highlighted in this and other national reports and Victoria's own reports which clearly indicate there is still a long way to go to reduce disadvantage among Aboriginal people.

### Partnership with Aboriginal Victorians

The Victorian Government actively engages with Victorian Aboriginal communities and their organisations.

Consistent with the *Victorian Aboriginal Affairs Framework 2013–2018* statewide, regional and/or localised engagement processes are in place at the program or issue based level in key areas such as justice, human services, health and family violence prevention. In addition, Ministerial Roundtables also provide strategic engagement on particular key issues.

Partnerships are vital in both identifying priorities and in implementing measures on the ground.

### Victorian Aboriginal Affairs Framework 2013–2018

The Framework commits Victoria to four major priorities – economic participation, protecting vulnerable Aboriginal children and families, achieving better access to and outcomes from universal service platforms and encouraging improved national action. The Framework identifies six Strategic Action Areas that, consistent with the National Indigenous Reform Agreement (NIRA), adopt a lifecourse approach to closing the gaps.

---

An Aboriginal Affairs Report on progress achieved against the priorities and action areas is produced and tabled in Parliament each year.

Within the Framework, Victoria is implementing major measures to secure improved outcomes. This includes a number of key medium to long-term strategies, particularly Koolin Balit: the Victorian Government's strategic directions for Aboriginal health, the Victorian Aboriginal Economic Strategy, the Aboriginal Justice Agreement Phase 3 and measures to support improved outcomes in education as well as for vulnerable children and families.

### Progress in Victoria

There are welcome improvements in some key outcomes. More Aboriginal Victorian children are accessing kindergarten and students are being retained in the school system longer. Aboriginal student performance in NAPLAN continues to improve. Better outcomes in these areas are expected to have positive 'downstream' effects for individuals including their future participation in the economy. More Aboriginal Victorians are also accessing preventative as well as tertiary health services. Significant service effort is delivered through Aboriginal community organisations.

The Census 2011 showed that over 75 per cent of Aboriginal people live in metropolitan, rural and regional parts of Australia. It is important that government effort recognise the gaps experienced by Aboriginal people in these parts of Australia (including Victoria) as well as the gaps experienced by people living in remote communities.

The Census 2011 also showed that more than 47 000 Victorians identified as being Aboriginal or Torres Strait Islander. This marked a significant increase over the previous Census. The Census also showed the rate of population increase in Victoria was the highest of all States.

One marker of progress is the preparedness and confidence of Aboriginal Victorians to identify in the Census and when accessing services.

Progress in Victoria is contingent on efforts from the Commonwealth as well as the Victorian Government. Victoria's efforts are on track and it looks forward to the Commonwealth delivering on its roles and responsibilities particularly in economic development, employment and health.

---

## Queensland Government comments

The Queensland Government works in partnership with Aboriginal and Torres Strait Islander people to empower, conserve the cultural heritage of, and improve life outcomes for Aboriginal and Torres Strait Islander people in Queensland.

Promoting economic participation by Aboriginal and Torres Strait Islander people in the Queensland economy is a priority of the Queensland Government. The *Queensland Aboriginal and Torres Strait Islander Economic Participation Framework* provides a basis for Aboriginal and Torres Strait Islander people, all levels of government, industry and business, and the non-government sector to work together to a clear goal — the economic independence of Aboriginal and Torres Strait Islander Queenslanders.

The Queensland Government is working with all stakeholders to pursue initiatives under the framework that are grouped in three priority areas: individual responsibility and opportunity; unlocking economic potential; and contributing to the economy. Actions under the framework give effect to the Queensland Government's commitment to match the workforce participation rates of Aboriginal and Torres Strait Islander people and those of non-Indigenous Queenslanders. Actions highlight the importance of education, health and regional development in promoting economic participation.

The Queensland Government is committed to education and training as a means of improving outcomes for Aboriginal and Torres Strait Islander Queenslanders through a Strategic Indigenous Vocational Education and Training Partnership. Commencing in 2014, the partnership invests an additional \$1 million each year for four years to fund training projects that will lead to jobs. The Government is working with Indigenous organisations, local employers, and industry to identify skills and employment needs and the geographic areas where they are needed.

The Queensland Government has been working to increase opportunities for home ownership for Aboriginal and Torres Strait Islander people in Queensland, passing laws which remove barriers to home ownership and freehold in Aboriginal and Torres Strait Islander communities. These reforms provide recognition of the right of Aboriginal and Torres Strait Islander people to own their own home on traditional lands, and provide greater opportunities to pursue social and economic development.

---

The laws do not force freehold title on Aboriginal and Torres Strait Islander communities, but rather, provide a pathway for communities to pursue freehold title if they choose to do so. Where a community decides that the freehold option is not appropriate for them, home ownership can be achieved under a 99 year (renewable) lease, which ensures ongoing Indigenous ownership. To complement these legislative changes and tenure resolution programs currently occurring in remote Indigenous communities, the Queensland Government is negotiating Indigenous Land Use Agreements to obtain relevant native title consents to allow for home ownership, future government infrastructure and commercial leasing.

The Queensland Government has implemented strategies that respond to specific issues and high levels of need in rural and remote Aboriginal and Torres Strait Islander communities. The Queensland Government has continued the Cape York Welfare Reform trial — a collaboration between the Australian and Queensland Governments and the Cape York Institute for Policy and Leadership. Cape York Welfare Reform commenced in 2008, and aims to reduce reliance on passive welfare, re-establish positive social norms, restore local Indigenous authority, and create incentives for four Cape communities to engage in the real economy.

The Family Responsibilities Commission has been a key component of the Cape York Welfare Reform model and appoints respected Elders to Local Commissioner positions, thereby rebuilding local authority. The Family Responsibilities Commission sends a consistent message about the expected behaviour of individuals and families and, where appropriate, refers individuals to support services. Welfare reform has contributed to positive changes in school attendance and increased commitment to education by parents. The Queensland Government has also worked with the Australian Government to implement initiatives under the Remote Service Delivery National Partnership Agreement which targets the four Cape York welfare reform communities as well as the communities of Mornington Island and Doomadgee.

In addition to the strategies identified above, the Queensland Government is taking action to improve attendance and outcomes for Indigenous students in all Queensland state schools. The Government's *Great Teachers=Great Results* initiative will lift the quality of teaching and student engagement across the State. Individualised case management approaches for Indigenous students are being implemented, with state school principals in Queensland acting on their responsibility to monitor and improve the attendance, engagement and performance of each Indigenous student in their school.

---

## **Western Australian Government comments**

The Western Australian Government is committed to achieving substantial change in the lives of Aboriginal people by addressing high levels of disadvantage across the OID priority outcomes areas.

Analysis of Western Australia's progress towards Closing the Gap targets highlights the delivery of a number of outputs across the seven building blocks, and indicates that some progress has been made to improve outcomes. This includes in the areas of early childhood education, where enrolments have improved, and year 12 attainment, where levels have also increased. These results indicate that the State's ongoing investment in positive performing areas will assist in sustaining progress against outcomes.

While investment in programs targeting Aboriginal disadvantage is having an impact across Western Australia, there is an opportunity to drive more positive outcomes and better address significant challenges. The State's performance recorded against the indicators of detention and incarceration, and also suicide, reveals that these issues are currently critical areas of disadvantage impacting the lives of Aboriginal Western Australians. These issues will require a targeted and strategic approach to prevent further deterioration and will be addressed as part of current efforts to improve State outcomes through policy and structural reform.

The State Government is committed to meeting the demand for services that is occurring due to a young Aboriginal population (53 per cent are under the age of 25 years) and a high proportion of Aboriginal Western Australians living in very remote towns and communities. There is significant opportunity attached to this expansion and considerable changes have occurred at a State and national policy, and economic level to support this growth.

Closing the gap objectives are no longer being funded through specific national partnerships (with the exception of the National Partnership on Remote Indigenous Housing) and the majority of federally funded Aboriginal specific programs have been consolidated and rationalised under the Department of the Prime Minister and Cabinet (PM&C). The State's priorities will be driven through joint investment and cooperation with PM&C.

The WA Government is exploring ways to work more closely with the community, through the Delivering Community Services in Partnership Policy, and with other governments to maximise effort and target action towards outcomes that will drive change across the OID framework.

---

## Way Forward

On 17 April 2013, Western Australia established the Aboriginal Affairs Cabinet Sub-Committee (AACSC) to drive better coordination across Government and improve collaboration with Aboriginal leaders and the non-government sector. The AACSC, chaired by the Minister for Aboriginal Affairs and other senior Ministers, is promoting changes to drive government accountability, reduce duplication, improve access to services and maximize effective expenditure for Aboriginal Western Australians. Identified priorities for improvement include: education, health and mental health, family support and children, regional and remote investment and economic development.

The Western Australian Government, with the Australian Government, has continued its commitment to improve education and training outcomes for Aboriginal children and students and seeks to improve school attendance by developing community-specific strategies to lift attendance rates above 90 per cent by 2019.

In addition, the Government is continuing to focus on delivering better pathways to employment through increased take up of Aboriginal school based traineeships, stronger engagement with the vocational education and training system, connecting Aboriginal jobseekers to employers through the Aboriginal Workforce Development Centres and increasing the level of Aboriginal employment within the public sector. Procurement processes have also been altered to provide increased opportunities for Aboriginal businesses to secure contracts with State public authorities.

Targeted remote investment and creating sustainable economic opportunities is a critical issue for remotely and regionally located Aboriginal people. A key initiative being trialled in Western Australia, through mechanisms such as the East Kimberley Transitional Housing Development Program, is the provision of employment and training opportunities linked to wraparound services. Targeted in remote areas, these programs support sustained transition to economic independence linked with housing, training and employment incentives.

In conjunction with the Commonwealth's *Indigenous Advancement Strategy* and reform driven by the AACSC, Western Australia will continue to utilize the OID priority outcome areas to drive substantial change and to overcome disadvantage in the lives of Aboriginal people in Western Australia.

---

## South Australian Government comments

The South Australian Government is committed to closing the gap in Aboriginal disadvantage by working collaboratively with Aboriginal South Australians to build capacity and future opportunities.

### Strategic Policy Framework

*South Australia's Strategic Plan (SASP)* is Government's peak strategy document. There are nine Aboriginal specific targets and twenty one indicators tracking Aboriginal wellbeing that align to the OID and COAG frameworks. The Chief Executive Group Aboriginal Affairs (CEGAA) leads and monitors activities in relation to Aboriginal targets and indicators.

The South Australian Aboriginal Advisory Council (SAAAC) is the peak advisory body to Government on Aboriginal Affairs; appointments are made following a public nomination process. The SAAAC is represented on CEGAA and members are also available to provide strategic advice to individual Government departments. On the recommendation of the SAAAC, the South Australian Government established the Office of the Commissioner for Aboriginal Engagement as an independent voice for the Aboriginal community.

### Governance, Leadership and Culture

The South Australian Government has a strong focus on strengthening governance and recognising Aboriginal culture and identity. In 2013 Aboriginal people were recognised as our first peoples in the South Australian Constitution and the State Government will ensure it plays an active role in the campaign to achieve similar recognition in the national Constitution.

In early 2014 the State Government also committed to draft legislation that will recognise the unique cultural identity and self-determining governance structures of Aboriginal communities in South Australia. The new legislation will provide guiding principles for consultation and cooperation between government and communities. To support implementation of the legislation the government has committed funding for the development and delivery of nation-building training and leadership programmes. This new curriculum will be specifically developed to support Aboriginal South Australians and the Public Sector to have the tools to better engage with one another and work together to build a sustainable future.

---

The South Australian Government is also working with Aboriginal communities to co-design an Aboriginal Regional Authority model as a mechanism for effective engagement between government and community.

## Reconciliation

The State Government has committed to a Reconciliation framework to guide its effort in Aboriginal Affairs. In support of this, the development of Reconciliation Action Plans (RAPs) by individual agencies has been a key priority of the Chief Executive Group Aboriginal Affairs (CEGAA) in 2013–2014. As a result of this effort, the State Government held an across-government RAP launch in February 2014, reportedly the largest launch of its kind since Reconciliation Australia's RAP programme commenced.

## Economic Participation

The South Australian Government is committed to building the capacity of and opportunities for Aboriginal employees, businesses and communities. Government will partner with stakeholders in the corporate sector to support and mentor Aboriginal owned businesses and increase opportunities for businesses to win tenders. The South Australian Government has also developed the South Australian Aboriginal Business Procurement Policy which enables government agencies to streamline the procurement process for Aboriginal businesses where minimum criteria have been met.

As part of its broader economic participation agenda, the Government is also continuing to support Aboriginal people and communities to maximise the potential economic benefits of land, including through the pursuit of home ownership opportunities and through support of the three Aboriginal land-holding authorities in South Australia.

Importantly within this context and the broader context of the State Government's support for its three Aboriginal statutory landholdings, the *Aboriginal Lands Trust Act 2013* will commence on 1 July 2014 as a result of the review of the *Aboriginal Lands Trust Act 1966* that began in 2008. The new Act will support the creation of a modern, skill based Aboriginal Lands Trust Board with more focused functions and powers that will enable the Trust to maximise the value of its landholdings for the benefit of Aboriginal people.

---

## Tasmanian Government comments

The Tasmanian Government continues to address Aboriginal disadvantage through Aboriginal specific programs and services, and services addressing disadvantage through the wider community.

### *Governance, Leadership and Culture*

The Tasmanian Government facilitates the issuing of cultural permits to Aboriginal people to undertake cultural activities such as hunting, fishing, and gathering without risk of prosecution. This includes cultural mutton birding permits.

The *Aboriginal and Dual Naming Policy* is a statewide policy providing clear direction for the Nomenclature Board, State Government agencies and Local Government authorities on the use of *palawa kani* language for naming geographic features and places. The Policy also recognises the ongoing relationship between Tasmanian Aboriginal people and the land and sea.

### Early Child Development

Tasmania's Child Health and Parent Service utilises creative strategies to strengthen engagement with Aboriginal families and provide them with opportunities to access universal child health services and programs. One of these strategies is the placement of Child and Family Health Nurses (CFHNs) within local Aboriginal organisations and Child and Family Centres. Basing CFHNs within these centres enables nurses to build relationships and trust with Aboriginal families, facilitate their access to and use of universal child health assessments and programs, and provide opportunistic advice and information in an informal setting. The onsite location of the CFHNs also enhances collaborative practice with other service providers in the centres and enables Aboriginal children and their families to access a continuum of services, from pre-conception to school age, from the one location.

### Education and Training

Tasmania's *Aboriginal Education Framework 2012–2015* provides comprehensive support to schools to address the challenges of readiness for school, engagement and connections, attendance, literacy and numeracy, leadership, quality teaching, workforce development and pathways to post-school options. The Aboriginal Education Services Unit plays a key role in the development of the Department's policies and initiatives.

---

The Aboriginal Education Services Unit also administers the Aboriginal Sharers of Knowledge (ASK) program involving Aboriginal community members.

### Healthy Lives

The Aboriginal Sport and Recreation program focuses on building links between Aboriginal community organisations and sport, active recreation and physical activity providers to provide opportunities for participation. The program provides financial and/or administrative support to these opportunities.

### Home Environment

The Tasmanian Government is resourcing a community based project which aims to support Aboriginal children and young people in identifying what family violence is, as well as providing direction and assistance in seeking help if experiencing family violence in the home.

### Safe and Supportive Communities

Tasmania Police supports the appointment and training of Aboriginal Liaison Officers who contribute on a statewide basis to the development of local strategies to reduce the number of Aboriginal people entering the criminal justice system, as either victims or offenders. A State Aboriginal Liaison Coordinator also performs an advisory role to the Aboriginal community.

The *Aboriginal Strategic Plan 2014–2022*, continues a focus on ensuring Aboriginal persons involved with Tasmania Police are provided support which recognises their cultural heritage.

The Tasmania Prison Service has been working with a community based Aboriginal organisation to support Aboriginal prisoners' pre and post release. Support includes assistance with housing, education, employment, transport, Centrelink applications and budgeting. Referrals to other organisations to address issues including mental health and drug and alcohol problems are also provided.

---

## **Australian Capital Territory Government comments**

The ACT is moving to close the gap on Aboriginal and Torres Strait Islander disadvantage and has committed to work towards equitable outcomes for Indigenous Canberrans. The proportion of Aboriginal and Torres Strait Islanders living in the ACT is projected to increase from 0.9 per cent to 1 per cent of the National population with an average growth rate of between 2.8 per cent and 3.1 per cent per year; the fastest growing of the states and territories.

The ACT performs quite well in comparison to all jurisdictions on most measures. However, there are a few areas where ACT performance is below the national performance. Areas that are of concern are:

- Rates of children and young people in out-of-home care
- Low birthweight babies
- Annual health care assessments/checks
- Overweight/obesity

### ***Whole of Government Aboriginal and Torres Strait Islander Agreement***

On 27 February 2014, the ACT Government announced the development of an agreement between government, the ACT Aboriginal and Torres Strait Islander Elected Body and the ACT Aboriginal and Torres Strait Islander community.

The Agreement will articulate how the ACT Government is working towards equitable outcomes for members of the local ACT Aboriginal and Torres Strait Islander community, and through its partnership with the Aboriginal and Torres Strait Islander Elected Body is creating better linkages that have improved the capacity of services delivery by ACT Government agencies.

The Aboriginal and Torres Strait Islander Elected Body has advocated for the ACT Government's development of such an agreement in consultation with them and the wider Aboriginal and Torres Strait Islander community.

The consultation process for the Agreement has included online surveying, targeted roundtables and community forums. Facilitated conversations with community service providers, Aboriginal and Torres Strait Islander organisations and government stakeholders have been fruitful in the shaping of the agreement.

---

The Agreement commits the ACT Government and the Aboriginal and Torres Strait Islander community through the Aboriginal and Torres Strait Islander Elected Body to pursuing equitable outcomes for individuals and members of Aboriginal and Torres Strait Islander communities in the ACT.

The Agreement is a commitment to supporting Aboriginal and Torres Strait Islander people, communities and organisations with the opportunities, knowledge and skills to increase their capacity to build an empowered, resilient and sustainable future.

## Education

The ACT is on track to close the gap in reading and writing in all years, with the exception of Year 9. The Government has introduced a number of targeted programs to support Aboriginal and Torres Strait Islander students at all levels of schooling, progressing to higher education, training and employment options.

There was a significant improvement of 30.2 percentage points in Year 12 or equivalent attainment for 20–24 years old Aboriginal and Torres Strait Islanders in the ACT between 2008 and 2012-13 to 86.8 per cent.

## Employment

On 31 March 2014, the Standing Committee on Health, Ageing, Community and Social Services handed over their report from the Inquiry into ACT Public Service Aboriginal and Torres Strait Islander Employment. The Standing Committee made 31 recommendations which are under consideration by the ACT Government.

The Inquiry has renewed focus on Aboriginal and Torres Strait Islander employment in the ACT Public Service. Proposed changes to the legislation that manage the Public Service will assist in the attraction of Aboriginal and Torres Strait Islander people to the ACT Public Service, their development and ensure employment pathways for Aboriginal and Torres Strait Islander staff.

---

## Northern Territory Government comments

The Northern Territory Government continues with its commitment to improve the lives of Indigenous Territorians and close the gap between Indigenous and non-Indigenous Territorians.

### *Framing the Future*

The Northern Territory's blueprint for the future is *Framing the Future*, which sets out the objectives of Prosperous Economy, Strong Society, Balanced Environment and Confident Culture.

Under the blueprint the Government is committed to unlocking the potential of the regions through increasing the capacity and capability of Aboriginal Territorians and businesses; engaging and encouraging participation; use, preservation and protection of the environment and a strong working relationship with Traditional Owners, land holders, communities and Land Councils; and recognition and respect for Aboriginal people, organisations and culture.

### Schooling

In May 2014 the Northern Territory Government released *A Share in the Future—Review of Indigenous Education in the Northern Territory*, an independent and comprehensive review of Indigenous education delivery. The report's recommendations include:

- differentiating between schools, providing additional support and programs to disadvantaged groups including the mandating of teaching programs
- identifying and building on successful programs in child and parent literacy from birth including a strong emphasis on English oracy
- providing access to quality secondary education programs in urban and regional high schools for students from remote communities by increasing the availability of full-service residential and boarding facilities
- developing a community engagement charter committing to appropriate cultural competence training, effective induction processes and tailored school council governance training
- developing a comprehensive plan focused on improving workforce quality and covering all aspects of employment in schools.

---

## Early childhood

The Northern Territory Government provides a range of quality Indigenous specific early childhood education and care programs, parenting support programs, staff training and infrastructure programs including the Families as First Teachers early learning and parenting support programs in 35 remote sites.

## Health

The Northern Territory is committed to a new health and hospital services framework that decentralises the delivery of healthcare through regional boards. An investment of \$50 million will also see the construction of new health centres at seven remote locations.

## Economic participation

The *Northern Territory Employment Strategy 2012–2015* is focused on increasing Indigenous participation in the workforce and supporting business and industry to continue to develop sustainable employment opportunities for Indigenous Territorians. The economic participation of Indigenous Territorians is also strengthened through a number of programs, including: the Indigenous Workforce Participation Initiatives Program, the Stronger Futures Local Jobs Package, the Indigenous Responsive Program, the Indigenous Business Development Program and the Indigenous Tourism Development Program.

## Healthy homes

Under the *National Partnership Agreement on Remote Indigenous Housing* a total of 1066 new houses and 2929 rebuilds and refurbishments have been completed at end March 2014 in addition to the employment of over 2000 Indigenous employees, exceeding the employment target by 8 per cent. Going forward there is a requirement of 40 per cent Indigenous employment for the Housing Maintenance Services and 50 per cent for the Tenancy Management Services which will facilitate increased local employment opportunities on remote communities. The Northern Territory is also implementing a remote public housing sales program from 01 July 2014 that will allow remote public housing tenants the opportunity to purchase their own home.

---

## Appendix 3 Aboriginal and Torres Strait Islander populations and language use

This appendix provides contextual data on the Aboriginal and Torres Strait Islander and non-Indigenous Australian populations, to aid interpretation of data elsewhere in the report. It complements the contextual information presented in chapter 3. This appendix also contains 2011 Census data on Aboriginal and Torres Strait Islander language use. The next Census will be held in August 2016.

### Indigenous population

Population estimates in this report are based on 2011 Census of Population and Housing counts, adjusted for net undercount as measured by the ABS Post Enumeration Survey (ABS 2013).

---

Figure A3.1 **Proportion of the population in each age group, 2011**

Source: ABS 2013, *Estimates of Aboriginal and Torres Strait Islander Australians, June 2011*, Cat. no. 3238.0.55.001; table A.1.

---

---

According to estimates of the Australian population in 2011:

- the Aboriginal and Torres Strait Islander population had a very different age structure to the non-Indigenous population. The Aboriginal and Torres Strait Islander population tended to be younger, with 35.9 per cent aged 0–14 years, compared to 18.4 per cent of the non-Indigenous population (figure A3.1)
- the proportion of the Aboriginal and Torres Strait Islander population aged 75 years and over was 1.0 per cent, compared with 6.5 per cent of the non-Indigenous population (figure A3.1)
- the different age structures of the populations was also reflected in their median (midpoint) ages. The median age of the Aboriginal and Torres Strait Islander population was 21.8 years, compared with a median age of 37.6 years for the non-Indigenous population (table A.1).

---

**Figure A3.2 Proportion of the population in each remoteness area, 2011**

Source: ABS 2013, *Estimates of Aboriginal and Torres Strait Islander Australians, June 2011*, Cat. no. 3238.0.55.001; table A.2.

The two populations also differed in their geographic distribution. In 2011, although the majority of both populations lived in major cities and regional areas, a much higher proportion of the Aboriginal and Torres Strait Islander population lived in remote and very remote areas (21.3 per cent, compared with 1.7 per cent of the non-Indigenous population (figure A3.2).

---

Figure A3.3 **Proportion of each State and Territory population who were Indigenous, 2011**

Source: ABS 2013, *Estimates of Aboriginal and Torres Strait Islander Australians, June 2011*, Cat. no. 3238.0.55.001; table A.2.

---

The proportion of the population who were Aboriginal and Torres Strait Islander differed across jurisdictions. The NT had the highest proportion of its population who were Aboriginal and Torres Strait Islander (29.8 per cent) and Victoria had the lowest (0.9 per cent) (figure A3.3).

The largest proportion of the national Aboriginal and Torres Strait Islander population lived in NSW (31.1 per cent). Other jurisdictions with relatively large Aboriginal and Torres Strait Islander populations (greater than 10 per cent) were Queensland, WA and the NT (see chapter 3, figure 3.3.1; table A.2).

Data on Aboriginal and Torres Strait Islander population estimates and projections from 2001–2014 can be found in table A.3.

## Use of Indigenous languages

The use of Aboriginal and Torres Strait Islander languages is relevant to many areas of the report, but particularly the ‘Governance, leadership and culture’ strategic area (chapter 5). It is estimated that around 250 languages were spoken by Aboriginal and Torres Strait Islander Australians prior to European settlement, but today only around 120 languages are still spoken (AIATSIS and FATSIL 2005; Marmion, Obata and Troy 2014).

Although language revitalisation and maintenance is crucial to preserving and strengthening traditional culture and people's identity and wellbeing (see section 5.5), a lack of proficiency in English can create barriers to education, (section 7.1 and 7.3), employment (section 4.6) and access to services (section 8.1 on primary health care). The indicator on engagement with services (section 5.3) includes information on difficulty understanding, or being understood by, service providers.

**Figure A3.4 Language spoken at home by Indigenous people, 2011<sup>a</sup>**

<sup>a</sup> Indigenous people who did not state what language they spoke at home are excluded from the analysis.

Source: ABS (unpublished) 2011 Census of Population and Housing; table A.4.

Nationally in 2011, 11.6 per cent of the Aboriginal and Torres Strait Islander population spoke an Indigenous language at home. This proportion varied across states and territories. The NT had the highest proportion (64.7 per cent) and Tasmania had the lowest (0.3 per cent) (figure A3.4).

The proportion of Aboriginal and Torres Strait Islander Australians who spoke an Indigenous language at home also differed across remoteness areas and age groups. Very remote areas had the highest proportion of Indigenous language speakers (61.5 per cent) and inner regional areas had the lowest proportion (1.0 per cent) (figure A3.5).

Figure A3.5 **Proportion of Indigenous people who spoke an Indigenous language at home, by remoteness area and age, 2011<sup>a</sup>**

<sup>a</sup> Indigenous people who did not state what language they spoke at home are excluded from the analysis.

Source: ABS (unpublished) 2011 Census of Population and Housing; table A.5.

Figure A3.6 **Indigenous people who spoke an Indigenous language at home, by remoteness area and English proficiency, 2011**

Source: ABS (unpublished) 2011 Census of Population and Housing; table A.5.

The majority of Aboriginal and Torres Strait Islander Australians who spoke an Indigenous language at home also spoke English well or very well (81.6 per cent). However, one in six

---

Indigenous language speakers said they did not speak English well, or at all (figure A3.6). Children aged 0–14 years accounted for more than half (59.7 per cent) of all people who spoke an Indigenous language at home and who did not speak English well or at all (table A.5).

## Attachment tables

Attachment tables are identified in references throughout this appendix by an ‘A’ prefix (for example, table A.2 is table 2 in the attachment tables for this appendix). The files containing the attachment tables can be found on the Review web page ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)).

(a) Some states and territories do not have all five remoteness classifications.

(b) For confidentiality purposes, the outer regional and remote areas of Victoria have been combined.

(c) Data for Tasmania available to age 65 years and over only. There is no major cities area in Tasmania. For confidentiality purposes, the outer regional, remote and very remote area have been combined.

(d) For the ACT, major cities and the inner regional areas have been combined. The ACT does not have outer regional, remote or very remote areas.

(e) The NT does not have major cities or inner regional areas.

(f) Includes other territories.

## Appendix 4 Data limitations

This appendix is designed to assist readers in their interpretation of data used in this report. General information on the different types of data sources (Census, sample surveys and administrative data) are included in chapter 3, along with specific information on the ABS Census of Population and Housing and the ABS Indigenous household surveys. Information on other key collections used in this report is provided below.

### **ABS mortality data**

Caution should be exercised when undertaking analysis of Aboriginal and Torres Strait Islander deaths data, particularly trends in mortality.

The registration of deaths is the responsibility of registrars in individual states and territories. State and Territory registrars supply this information to the ABS for compilation into aggregate mortality statistics. Although it is considered that most Aboriginal and Torres Strait Islander deaths are registered, not all Aboriginal and Torres Strait Islander Australians are identified as such in deaths data. The likelihood that a person will be identified as being of Aboriginal and Torres Strait Islander origin is influenced by a range of factors including: who completes the form; perception of the information use; education programs on the importance of identifying and perceptions about the consequences of identifying (ABS 2013a).

The ABS carried out research linking Census records and deaths registrations following the 2006 and 2011 Censuses. The proportion of people identified as Indigenous in the Census but not in deaths records increased from 20 per cent in 2006 to 24 per cent in 2011. The ABS considered that this was consistent with the increase in the count of Aboriginal and Torres Strait Islander Australians across the two Censuses (ABS 2013b).

Mortality data in this report are presented with variability bands. The variability bands are used to account for natural random variations in counts, and provide a 95 per cent confidence interval. Variability bands should be used for the purposes of comparisons at a point in time and over time. They should not be used for comparing mortality rates across jurisdictions at a single point in time, as the variability bands and mortality rates do not take into account differences in under-identification of Indigenous deaths across jurisdictions.

---

## Life expectancy data

Life tables used to calculate life expectancy estimates are available for the populations of NSW, Queensland, WA, the NT and Australia as a whole. (Due to the small number of Aboriginal and Torres Strait Islander deaths in Victoria, SA, Tasmania and the ACT, it is not currently possible to construct life tables for these jurisdictions.)

To account for the Aboriginal and Torres Strait Islander under-identification in deaths registrations, the numbers of Aboriginal and Torres Strait Islander deaths have been adjusted according to the factors derived from the ABS Census Data Enhancement (CDE) study. The factors are based on the 2011 CDE study, and therefore 2006 and 2011 life expectancy estimates are not directly comparable. ABS revised the 2005–2007 life tables which are comparable to the 2010–2012 life tables. These revised tables are included in section 4.1 in this report.

A further improvement was made to the method for calculating Indigenous life tables at the Australia level for the period 2010–2012. The method now takes age-specific identification rates into account when calculating the under-identification adjustment. A separate Australian total is provided for 2010–2012 and 2005–2007 on this basis (but this improved method cannot currently be applied to State and Territory or remoteness life tables).

## Hospitalisations data

Hospitalisations data are from the National Hospital Morbidity Database (NHMD), a national collection of hospitalisation records maintained by the Australian Institute of Health and Welfare (AIHW). Health departments in all states and territories provide the AIHW with information on the characteristics, diagnosis and care of admitted patients from almost all hospitals, including public acute and psychiatric hospitals, private acute and psychiatric hospitals, and private free-standing day hospital facilities.

Hospitalisations include admissions that result in discharges, transfers, deaths or changes in the type or episode of care (defined in the database as hospital separations). A record is included for each hospitalisation, not for each patient, so patients who are admitted more than once in a year have more than one record in the database. Due to the high rates of end-stage renal disease requiring frequent dialysis treatment among Aboriginal and Torres Strait Islander Australians, it is important to separate hospitalisation rates for dialysis from rates for other conditions.

Overall, the quality of Aboriginal and Torres Strait Islander identification in hospital separations data has improved in recent years and data for all states and territories can be reported for national analyses of hospitalisations from 2010-11 onwards (AIHW 2013). Prior to 2010-11, data for Tasmania and the ACT were considered not to be of sufficient robustness to be included in totals, but are reported separately with caveats (AIHW 2010).

The following should be used to guide interpretation of the hospitalisations data:

- 
- Each State and Territory has a unique demographic structure, and factors such as age and Aboriginal and Torres Strait Islander status can have an effect on the nature of health care delivery. The frequency of particular procedures, for example, can be affected by the demographic composition of the population (AIHW 2005).
  - Although data on hospitalisations from the NHMD can reflect an aspect of the burden of disease in the community, they do not usually provide measures of the incidence or prevalence of conditions. This is because not all people with a particular condition or degree of illness are treated in hospital, and there are multiple admissions for some chronic conditions. Also, the number and pattern of hospitalisations can be affected by differing admission practices, and differing levels and patterns of service provision (AIHW 2005).

## **National Perinatal Data Collection**

Data on pregnancy and childbirth are sourced from the National Perinatal Data Collection (NPDC), a collection maintained by the AIHW comprising of data items as specified in the Perinatal National Minimum Data Set (NMDS), plus additional items collected by the State and Territories. From 2011, the Indigenous status of the baby (that is, the mother and/or father has identified as being of Aboriginal and/or Torres Strait Islander origin) has been collected. Previously the Indigenous status of the baby was only available based on the Indigenous status of the mother, leading to an underestimate of Aboriginal and Torres Strait Islander births. For around 6 per cent of births the Indigenous status is unknown, due to unknown Indigenous status of the father. Identification of the father is not compulsory on birth registrations.

The accuracy of Aboriginal and Torres Strait Islander identification in the NPDC has not been formally assessed and is likely to vary across jurisdictions.

## **Australian Institute of Criminology (AIC) homicide data and other police data**

The National Homicide Monitoring Program (NHMP) is funded by the Commonwealth Government. The data (and tabulations) used in this publication were made available through the Australian Institute of Criminology (AIC). These data were originally collected by the AIC with the assistance of each of Australia's Police Services. Neither the police, nor the AIC bear any responsibility for the analysis or interpretations presented in this report.

NHMP data are derived from police records, which depend on the police accurately recording the Indigenous status of the victim and offender. In some jurisdictions this may involve the police making a subjective assessment based solely on the victim's or offender's appearance, which might lead to errors and inconsistencies. In other

---

jurisdictions, Indigenous status is determined by police administering a standard question, but not all Indigenous people may choose to identify when asked by police.

In addition to NHMP data, police data are included in sections 4.11 (Family and community violence) and 11.3 (Juvenile diversions).

# Appendix 5 Measures and data sources

## Introduction

The following table summarises the major measures and data sources used to report against the indicators in this report. Unless otherwise noted, all measures are disaggregated by Aboriginal and Torres status (Indigenous/non-Indigenous; Indigenous/other or Indigenous/total population).

The table provides references to broad data collections. Many of the data items cited in this report are not included in a standard publication but have been made available on request by the data providers.

## Acronyms

The following acronyms for data sources are used in the table:

AATSIHS	Australian Aboriginal and Torres Strait Islander Health Survey
AHS	Australian Health Survey
Census	Census of Population and Housing
GSS	General Social Survey
HPF	Aboriginal and Torres Strait Islander Health Performance Framework
NAPLAN	National Assessment Program—Literacy and Numeracy
NATSIHS	National Aboriginal and Torres Strait Islander Health Survey
NATSISS	National Aboriginal and Torres Strait Islander Social Survey
NHS	National Health Survey
SDAC	Survey of Disability Ageing and Carers

<b>Indicators</b>	<b>Measure</b>	<b>Collection</b>
<b>4 COAG targets</b>		
4.1 Life expectancy	<p><i>Main measure:</i></p> <ul style="list-style-type: none"> <li>Estimated life expectancy at birth (NSW, Queensland, WA, the NT and national by sex; remoteness)</li> </ul> <p><i>Supplementary measure:</i></p> <ul style="list-style-type: none"> <li>Mortality rates — all causes and by leading causes, crude and age-standardised (NSW, Queensland, WA, SA the NT and national by age; sex; remoteness)</li> </ul>	<p><i>ABS Life Tables for Aboriginal and Torres Strait Islander Australians</i></p> <p><i>ABS Deaths Australia Collection</i> <i>ABS Causes of Death Collection</i></p>
